FRANCE. In August, 1919, the number of paying members of the party was placed at 102,000 which was nearly three times the figure that had been given for December, 1918. In April, 1919, the Socialist party voted to remain in the Second International, provided that those who were Socialists only in name be expelled from it. The motion of M. Lorient to take part in the "Third" International at Moscow was defeated by 894 votes against 270. The demands of the Congress in its electoral programme were that a constituent assembly be called; universal suffrage granted, and the following reforms adopted: The initiative and proportional representation, a single legislative chamber, decentralization of government, representation of workers in industrial management, nationalization of essential industries. It also protested against the ratification of the Versailles peace and it voted down the League of Nations by 1420 to 112. The newspaper organ of the party set forth the view that the peace should not impose punishment upon Germany and that the German Socialists were trying to turn the revolution into an actual Socialistic movement. This and other features were embodied in a resolution passed by the Congress which greeted the German republic and declared its support of the true German Socialism and its respect for the memory of Liebknecht, Eisner, Rosa Luxembourg and other martyrs of the cause; extended greetings to the Russian Soviet government and set forth its views of the policy of that government as follows: Socialist thinkers from the time of Karl Marx had always recognized the necessity of the dictatorship of the proletariat, which naturally had to employ force not only to establish itself but to combat counter-revolutions. It declared for unceasing opposition to the bourgeois control, for refusal to vote the budget and for the exclusion of all alliances or electoral coalition on the occasion of a first or single ballot. The Congress led to the separation of two Communist groups formed in order to enter into relations with the "Third" International.

As the general elections approached a congress of the French Socialists was held at the beginning of October. The object of the meeting was to secure harmony or at least the appearance of it before the country. This was difficult because every shade of opinion was represented and the most diverse elements were held together by artificial ties. The party for example comprised such extreme opposites as those who declared themselves anti-Bolshevist like M. Albert Thomas, and those who showed a Bolshevist tendency like the partisans of M. Longuet. The efforts to secure harmony were opposed by

several members of the extreme factions such as M. Rayspoort and Madam Saumonneau. The latter demanded the exclusion from the party of those Socialists who had voted for the budget and also proposed that every deputy who had either voted for the peace or abstained from voting should be dismissed from the party, aiming especially at M. Albert Thomas who had declared that he might abstain from voting. The Congress did not follow either of these courses. As to those who had voted the budgets it confined itself to blaming them, and in regard to voting for the Treaty of Peace it simply said that the Treaty of Peace must not be ratified by the elected Socialists. The chief paragraphs of the final resolution, setting forth the attitude of the party were as follows: "The National Congress, considering the question raised by several federations in regard to the attitude of the 11 Socialist deputies who on two occasions voted the credits demanded by the bourgeois government, repeats that the refusal of credits continues as the basic principle of Socialist unity. The Socialists elected to parliament form a single group in the face of all the bourgeois political factions. The Socialist group in parliament must refuse the government all the means that assure the bourgeois mastery and control of power, and must therefore refuse the military credits, the credits for colonial conquest, and the budget as a whole. The Congress, considering the problems occasioned in certain federations by the difficulties relating to the nomination as candidates for the legislative elections of comrades already elected, declares that for these nominations it is the duty of the federations to safeguard Socialist principles and at the same time display a broad spirit of toleration and of Socialist unity. In view of the approaching legislative elections the Congress directs the permanent administrative committee to issue an address to the workers of France which shall make them realize the necessity of harmony among the diverse elements. This manifesto must base itself on the programme of the party and the national and international situation at the time of its issue." The resolution was adopted by 1427 votes against 490 for the resolution proposed by Madam Saumonneau, and two abstentions. In the parliamentary elections of November, 1919, the total Socialistic vote was placed at 1,750,000, a gain of about 40 per cent over 1914. Their representation in parliament, however, was reduced from 105 to 55. This was attributed to the complicated system of representation. See FRANCE, *History*.

French Trades Union Congress. The meeting of the Trade Union Congress was held at Lyons in September and it came to an end on September 21st, having voted a resolution by 1633 against 324 which set forth the general programme. To indicate the attitude of organized labor and the distinction between it and the Socialist programmes the following summary is given: The objects of organized labor were as follows: To put an end to the employing class and the wage system; to suppress the class warfare and replace it with a collective organization in which all would share equally in bearing the burdens and in making the laws; the direction and control of this organization to be in the hands of labor, for labor is the prime factor to which all others are merely subordinate or parasitic; the complete emancipation of labor which can only be secured by the expropriation of capi-

tal; the general strike to be the means of action; direct pressure always to be brought to bear upon the employer. Though these were the ultimate ends the programme declared that at present all the force of the movement should be directed to the conclusion of contracts, which contracts were of value as marking stages toward the desired end, for they successfully limited the authority of the employer and tended to introduce in shop or factory the emancipating force of the trade union. The ultimate aims were to be achieved by the nationalization of the great public services, namely, land and water transport, mines, and credit institutions. The resolution declared that "the direct exploitation by the collectivity of the general wealth, and the placing under its control of the functions and organs that direct the industrial processes for the transformation of this wealth and its distribution, are an essential condition of the reorganization which we wish to pursue." This did not involve, like state Socialism, the extension of the power, and functions of the state, but only the turning over of industry throughout the country to the producers and consumers combined. The practical means of carrying out such a plan were not indicated. The resolution declared that the labor unions were neutral in respect to purpose and political doctrines, and did not find their exact and exclusive expression in acts of violence. At the same time it declared that trade unionism was in its origin, its present character, and its permanent ideal, a revolutionary force.

The attitude of the trade unions toward socialism in France was indicated by the remarks of the secretary of the Federation of Labor, M. Marcel Laurent. At a meeting in 1919 he said that now that the elections were approaching, the trades unionists resolved to prevent their ideals and their policy from being made subservient to any political party whatever. Politics meant disaster and were the cause of all their evils. Politics must disappear and not trade unionism. This evidently bore on the recent conference at Lucerne, where the French majority Socialists had approved the German declaration to the effect that the hour of revolution had sounded, and that it was necessary to build up an organization from which trade unionism and co-operation would be excluded. This was taken by some to mean a Bolshevik policy. But the Socialists in the French press explained that the majority of the French representatives at Lucerne had in no wise approved this German programme, and replied that they did not desire to exclude the trade unions and the coöperatives. Nevertheless the trade unions distrusted the politicians as sure to manipulate the working-class organizations according to their own desires, and showed an intention to continue to act outside of politics. The conservative element in France was as distrustful of trade unionism as of Socialism. It was pointed out that French trade unionism was a different thing from the American institution, because aside from providing for its professional interests and from the work of organization, it undertook especially to interfere with the administration of public affairs, and with the control of the general policy of the nation. It made use, for example, of the political strike which was a most dangerous instrument of revolution. In a report of the British Federation of Trades Unions, for example, it was said that political strikes were not

directed against capitalism, but against the community, and that the government must protect the public against such strikes or abandon its functions. This was not the attitude of the French unionists. At their meetings they often concerned themselves with revolutionary programmes and considerations of solidarity of the working class, etc., which had nothing to do with the efforts of unionism as understood in Great Britain and the United States.

In view of the ultimate revolutionary objects of the trades unions the attitude of French teachers and college professors is of interest. The French school teachers have for many years endeavored to form a union, and finally they decided to join the labor federation, but in 1919 their right to organize in that manner had not been admitted by the government. The college professors of France took a similar course not long afterwards, and on October 19th, they decided to hold a referendum on the question whether their association which had already been formed should be turned into a regular trades union, and affiliated with the labor federation. Another point that they were to decide was the question whether the union should embrace all technical men, journalists, school teachers, professors, authors, doctors and lawyers, and constitute the so called National Federation of Intellectuals. The proposed organization was as follows: First, a professional body, confined to college professors; second, a union of teachers and high school professors; third, a union of all grades engaged in public instruction; fourth, union of functionaries of all classes; fifth, union of all men of liberal professions. Finally the question was to be decided whether a union of these bodies should be formed with the general federation of labor. See FRANCE, *History*.

GERMANY. The extreme element in Germany as has already been said in the article, GERMANY, broke completely with the Majority Socialists. In January there was sharp fighting between the revolutionists and the government. The result of the elections to the National Assembly was unfavorable to the revolutionists who considered that it was practically a triumph of the bourgeois classes. Power passed completely into the hands of the Majority Socialists. The influence of Independent Socialism, however, was reported to have increased during the year but was impeded by its lack of harmony. There were three tendencies: First, the group headed by Kautsky, Bernstein, and others, who opposed the principle of the dictatorship of the proletariat and attacked Bolshevism in general and the Soviet government of Russia in particular; Second, the Centre group headed by the late Hugo Haase which favored parliamentary activity while not opposed to the principle of dictatorship of the proletariat; Third, the extreme elements of the party which favored revolutionary action and desired a close union with the Russian Soviet government. The Independent Socialists took part in the Berne and Lucerne Congresses. They joined in the International demonstration of July 21st on behalf of Soviet Russia. Their membership was reported at 700,000 as compared with 300,000 a few years before.

GREAT BRITAIN. In regard to the relations of the British Labor party with the Socialists, see articles GREAT BRITAIN; STRIKES AND LOCK-OUTS; TRADE UNIONS, ETC. Efforts to bring the Socialist parties of Great Britain together were

unsuccessful. There was a conference of the three groups: The Independent Labor party, the British Socialist party, and the Socialist Labor party, but it did not result in a union. The British Socialist party represents the radical element. At the Sheffield Conference in 1919 it expressed approval of the course taken by the workers of Hungary. It did not take action in regard to the Berne Conference because of its objection to the representation in that conference of the parties opposed to revolution. The National Socialist party held a convention at Northampton in August in which it indorsed the proposed League of Nations. It also favored the alliance between England, France, and the United States.

HUNGARY. The establishment and overthrow of the Soviet government in Hungary has been discussed in the article AUSTRIA-HUNGARY (see paragraph on *History*). The fall of the Socialist government led to the disruption of the Socialist party. The Socialists had joined with the Communists for the creation of a new Socialist state and the two elements worked together with a fair degree of harmony so long as the Soviet government lasted. In September, however, the Communist régime had disappeared and the Socialist party held a conference at which it was decided to dissolve the union with the Communist element. It repudiated the "Third" International (Moscow) and decided for affiliation with the International Socialist Bureau. In the latter part of the year Hungary was completely in the control of the reactionaries; the Communist party was proscribed and in so far as it existed held its meetings in secret.

ITALY. The executive committee of Italian Socialist party decided in March, 1919, by a vote of 10 to three to indorse the programme and manifesto of the Moscow Conference. This action was supported by a great majority at the National Convention of the party which also reasserted its attitude against the war and censured Socialist deputies for not taking a more aggressive stand in parliament. In December, 1918, the executive committee had already submitted a programme of a radical nature and this also met with the approval of the party. Its features included socialization of production, etc., direct participation in certain industrial activities of workers; distribution of commodities exclusively through coöperation; abolition of military conscription; and the union of the Socialist proletarian republics. Furthermore it demanded the withdrawal of troops from Russia and it was against the rendering of homage to the representative of the United States. As a result, when President Wilson addressed the Chamber of Deputies about 40 seats were empty. The Italian party joined in the demonstration of July 1st and they carried out a general strike in protest against the Russian blockade. This brought industry to a standstill in several of the provinces and for a time traffic ceased and Soviet governments were set up in over 200 towns. The Peace Treaty was denounced as well as the proposed League of Nations. In the elections of November, 1919, the Socialists gained a great victory. Votes in their favor were placed at about 3,000,000 as compared with 883,409 in 1913. See ITALY, *History*.

SWEDEN. The main Socialist party in Sweden is the Social Democratic Labor party which is moderate in tendency. It favored neutrality

during the war. The so-called Socialist party has devoted its attention to revolutionizing the Labor movement. At its convention in June, 1919 it favored by a vote of 136 to 69 the movement of mass action in order to get possession of the political power and to establish Socialism, and declared for dictatorship of the proletariat. The more moderate or Social Democratic Labor party was reported to have 600 members in the city councils and over 6000 on town, school, and taxation boards. Its parliamentary strength was 86 representatives as compared with 12 of the Socialist party.

SWITZERLAND. At the regular conference of the Swiss Social Democratic party held early in 1919, resolutions were passed in favor of the dictatorship of the proletariat and pledging support to Soviet Russia; indorsing the general strike and opposing the participation of members in the Federal government; demanding the withdrawal from the Second International and approving the participation in the "Third" International (Moscow). The formation of a Communist party resulted in May, 1919, from the refusal of the Social Democrats to favor political action. Elections during the year showed an increased vote for the Social Democratic party. In elections for parliament for October their representatives in the National Council were increased to 41 as compared with 18 in 1914. The party joined in 1919 with the labor unions in presenting a series of demands in order to offset the high cost of living. These included the minimum wage, price-fixing, government control of necessities, etc.

OTHER FOREIGN COUNTRIES. Among other countries of Europe the Socialist parties of the following may be briefly mentioned: In Bulgaria the Socialist element was divided into two wings of which one was moderate and the other communistic. There was a bitter hostility between them which increased on account of the moderates' support of the government and of the majority Socialists in Germany. The moderate element was represented at the Berne International Conference. The Communist element at a convention held in May, 1919, decided to affiliate with the Moscow International Conference and definitely changed its name to the Communist party. In Czecho-Slovakia the war disorganized the condition of socialism. The Social Democratic party became nationalist in its programme and finally definitely joined the nationalist movement. This resulted in a unified Socialist party, moderate in its sympathies which associated itself with the International Socialist Bureau and took part in the Berne and Lucerne Conferences. It demanded withdrawal of the Czecho-Slovakian troops from Siberia. This was opposed by the Nationalist Conference. Other points of disagreement arose and weakened the Socialist movement but the Social Democratic Labor party was the strongest of the groups. It claimed a membership of 122,000. Almost every member of the government in 1919 was a Socialist of one shade or another. The prime minister, a Social Democrat, announced a programme tending toward the establishment of Socialistic institutions, but not of a revolutionary nature. The alliance of the Socialists with the nationalist groups led to the formation of a Communist party in the spring. (See CZECHO-SLOVAKIA.) In Denmark the Social Democratic party became a part of the government during the war. The

Socialist movement in Denmark is described as the most conservative in the Scandinavian countries. The Social Democratic party is opposed to the radical tendencies of the Socialist movement, and is interested chiefly in securing reforms and the promotion of social and labor legislation. In Finland Socialistic activities were greatly reduced on account of the reaction known as the White Terror. The extreme element was to a large degree suppressed. The Social Democrats were tolerated by the government, being moderate in policy. In March they had secured 80 seats out of the 200 in parliament. Many of the radicals were held in prison though some were released in the course of the year. In the Netherlands the Social Democratic Labor party declared at its national convention that it was opposed to capitalistic rule. The Social Democratic party, more radical in tendency, allied itself with the international anti-war groups during the war. The former party claimed about 42,633 members. It was reported in 1919, however, that the more radical Social Democratic party was increasing in power. In Norway the more radical elements assumed control of the Social Democratic party in 1919. It passed a resolution approving mass action and decided to join the "Third" International (Moscow). In the election of 1919 its vote was increased to 297,000 as compared with 196,000 in 1915. It claimed a membership of about 94,000. In Poland 80 Socialists of different shades were elected to the first constituent assembly in February, 1919. Its representatives, however, came from a more moderate element for the radical element on account of the hostility of the government could not participate in the elections. A Communist party was organized in May, 1919, and many of the radical members of the Social Democrats joined it. In Rumania the Socialists elected 12 deputies in the elections of November, 1919, increasing the membership of the party from 4000 to 24,000. The Social Democratic party was represented at the Berne Conference by two delegates who, however, were ordered not to take part in the discussions. The party voted down almost unanimously a proposal to affiliate with the International Socialist Bureau. The Rumanian party was pacifist during the war and was one of the first to approve the Zimmerwald and Kienthal movements. In Jugo-Slavia the Socialists were prosecuted by the government and on May 1st some 350 members of the Socialist Democratic party were arrested. In Spain the Socialists held a conference in the spring at which they declared against intervention in Russian affairs and favored a general strike against the invasion of Russia. They also called upon the party's representatives in parliament to introduce a bill forbidding the provisioning of counter-revolutionary forces in Russia. The proposal to join the "Third" International conference, however, was voted down by a large majority. The party maintained its relations with the Second International and was represented at the Berne and Lucerne Conferences.

UNITED STATES. Throughout the war the American Socialist party constantly worked to keep the United States out of war, remaining true to the principle of the international solidarity of the working classes. The Italian Socialists who had also maintained this attitude said in their address to President Wilson during his

visit to Italy in June, 1919: "To the honor of Socialism of the United States we recollect that they also adhere to our international principles and do not support your war." The attitude of the party in war-time was expressed at the celebrated National Emergency Convention at St. Louis, April 7-14, 1917, in what was known as the St. Louis Anti-war Proclamation Programme, which was afterwards ratified by a large majority of the party members. There was however soon after the entry of the United States in the war, a split in the party, which carried off some of the pro-war members, and they combined with various radical groups to start a National organization but the movement did not attain any great numerical importance. Also in the year 1919 the Socialist party chose three delegates to represent it at the International Socialist Conference at Berne but they were unable to obtain passports until too late to attend the meeting. In 1919 factional disputes developed in the party and resulted in the withdrawal of the more revolutionary and radical element including the foreign-speaking members, especially those in the seven Slavic federations. These dissidents formed the groups subsequently known as the Communist and the Communist Labor parties. They took this action after the Socialist party convention which was opened August 30th in Chicago. Among the important acts of this convention may be mentioned the fact that it definitely committed itself to the support of Eugene V. Debs as presidential nominee of the party, the motion to be ratified at the 1920 convention. Another important feature of the convention was the decision in regard to international relations. It declared that the Second International ceased to operate upon the outbreak of war; that the Berne Conference illustrated this collapse especially in its failure to take a helpful attitude toward Russia; that any International to be effective must contain only those elements which stand unreservedly upon the basis of the class struggle. It definitely pronounced the Second International dead and it declared itself in support of the "Third" International (Moscow), because it was really doing something against imperialism; because it was threatened by the combined capitalist forces merely because it was proletarian; and because its downfall would mean the downfall of the Socialist republics in Europe and destroy the hope of Socialists for the future. The convention of August 30th adopted a series of resolutions which are summarized as follows by the *American Labor Year Book*: *Ireland*—Protesting against the military occupation of Ireland and demanding self-determination for the Irish Republic.

India—Protesting against the deportation of Indian revolutionists from the United States and demanding self-determination for India.

Jewish Pogroms—Condemning the pogroms against the Jews, and pointing out the absence of such pogroms in Soviet Russia and Hungary.

Pan-American Relations—Warning against the extent of American Imperialism, and protesting against Mexican intervention.

Mexico—Electing a fraternal delegate to the convention of the Mexican Socialist party.

Espionage Law—Demanding the repeal of the Espionage law and the reestablishing of civil liberties

Race Problems—Protesting against mob violence against negroes.

Military Training—Protesting against the agitation for military training because "one of the chief purposes of an army is to maintain the power of the capitalist state and supply it with a mighty weapon against labor in revolt."

Deportation and Immigration—Protesting against the deportation of American residents and favoring free immigration.

Mooney—Protesting against his imprisonment and calling upon members to participate in the one-day strike, Oct. 8, 1919.

Berger—Demanding that Victor L. Berger be seated as a member of Congress from Wisconsin.

Plumb Plan—Explaining Socialist idea of public ownership and democratic management of public utilities, and pointing out that the movement for nationalization and control of railroads as proposed by the Plumb Plan is not entirely in accord with the Socialist programme.

Cooperatives—Favoring the establishment of cooperatives and recommending that literature on the subject be distributed.

Industrial Representation—Favoring an amendment to the United States Constitution to provide for the election of representatives in the various legislative bodies from occupational groups instead of geographical units.

Economic Organization—Favoring industrial unionism and establishing a labor department for the preparation of literature and more active work among the labor unions.

Agenda—Instructing the National Executive Committee to prepare an agenda for the next party national convention.

SOCIOLOGY. For detailed material under this subject heading, references will be found in the YEAR BOOK under SOCIAL ECONOMICS, POLITICAL ECONOMY, BIRTH CONTROL, CHARITIES, LABOR, PENOLOGY, SOCIAL HYGIENE, and INDUSTRIAL RECONSTRUCTION.

The American Sociological Society held its annual meeting at Chicago, Ill., on December 29th, 30th, and 31st, in conjunction with the annual meetings of several other learned societies. The President of the Association is Prof. Frank W. Blackmar, and Prof. Scott E. W. Bedford is Secretary and Treasurer. The main topic for discussion at the meeting was a consideration of the various phases of the problem of democracy. The meeting was divided into a number of sessions at which papers on assigned subjects were read, the reading being followed by a discussion. The papers read were "Democracy in Politics" by U. G. Weatherly; "Democracy and Partisan Politics" by J. M. Gillette; "Democracy and Labor" by J. Roscnwald; "Some Psychological Aspects of Industrial Reconstruction" by A. B. Wolfe; "Democracy and Community Organization" by D. Sanderson; "Democracy and Class Relations" by F. S. Chapin; "Modern Philanthropic Movements in their Relation to Democracy" by J. L. Gillin; "Religion and Democracy" by C. A. Ellwood; "Democracy and Reconstruction in Europe" by W. A. White; "Labor and International Relations" by J. B. Andrews; "The Problems of Educating a De-

moeracy" by W. R. Smith; "Vocational Factors in Democratic Education" by D. Snedden; "Racial Factors in Democracy" by J. Dowd; "Americanization" by Jane Addams; "Democracy and Bolshevism" by S. Perlman; and "Democracy and Socialism" by J. E. Hagerly.

SODIUM. See CHEMISTRY, INDUSTRIAL.

SOILS. During the world war and following it the soils of the United States maintained a greatly increased production. This was made possible by extending the cropped area and increasing the acre yields. The area of arable land in the United States is estimated at 850,000,000 acres, or 45 per cent of the total area of the country. The area in crops in 1909 was 311,000,000 acres; in 1918, 368,000,000 acres. It is estimated that 50 per cent of this increased acreage was due to the effort to meet war-time needs. The report of the Secretary of Agriculture for 1919 shows that during the past 25 years there has been an upward tendency in acre yields, amounting on the average to 0.5 per cent per

year, as a result of improved processes and better practices in all parts of the United States, and the Secretary adds—"for many years to come the average yield per acre . . . may be expected to increase," for, notwithstanding the upward tendency in acre yields "only about 15 per cent of the land in cultivation is yielding reasonably full returns." He points out also that "the Nation can further expand its output of commodities by cultivating the tillable land which at present is unused, estimated to be over 60 per cent of the total." It is estimated, moreover, that there is 300,000,000 acres of land in the United States which can be reclaimed by clearing, drainage, and irrigation, and Congress was strongly urged during the year to make enlarged provision for the reclamation of these lands and for settling returned soldiers upon them. Land utilization was in a measure revolutionized in Great Britain as a result of the exigencies of war. About 3,000,000 acres of grass land in the United Kingdom was brought under cultivation during the war with the result that the production of breadstuffs was increased fourfold. The indications are that the proportion of grass land to cultivated soil will not again be as great as it has been in past years. There still remain, however, 30,000,000 acres in permanent or temporary grass and 16,000,000 acres of mountain grazing land.

The systematic survey of the soils of the United States was continued by the Bureau of Soils during the past year with reduced force. Nevertheless, during the year ended June 30, 1919, a total area of 33,988 square miles, or 21,752,320 acres, was surveyed and mapped in detail (as compared with 38,136 square miles the previous year), making the total area so covered to date 517,949 square miles, or 331,487,360 acres. A reconnaissance survey was made of an area of about 6085 square miles in the State of Texas, making the total area covered to date by reconnaissance surveys 98,382 square miles, or 62,964,480 acres. The results of the soil survey work were found to be especially useful during the war not only in promoting production but for purely military purposes. The soil maps and base map information were used by the army engineers, and military purposes were still further served by selecting for survey during the winter of 1918-19 those localities in the Southern States where there was the greatest need for the fundamental information which such surveys supply. The demonstrated value of the data obtained through comprehensive and systematic surveys gives special point to the recommendation which the Director of the U. S. Geological Survey makes, in his last annual report, for adequate provision for the speedy completion of the topographic survey of the United States, which has been in progress for 40 years and has covered only about 40 per cent of the total area of the country. It is stated that with the Geological Survey's appropriations for topographic surveys, with cooperative State funds, and with funds contributed by the War Department, approximately \$700,000 became available for this work July 1, 1919. It is estimated that a total of \$40,000,000 is required to complete the work by 1932.

The Bureau of Soils continued its studies of soils with reference to forest growth and reforestation; land classification on the Great Plains and elsewhere; extending existing irriga-

tion projects; and production of truck crops in the Eastern United States. A generalized soil map of Africa, based on existing literature, was prepared, and a survey of soil and other economic features of parts of Guatemala and Honduras was made. Important contributions were made during the year to the knowledge of the soil solution, tending to confirm the view that this solution is neither saturated nor constant and that there is a direct relation between the concentration of the solution and fertility of the soil. Good soils appear to replace the water-soluble materials as fast as they are absorbed by plants, and even poor soils may have a considerable reserve of soluble material. In other words, plants apparently can not entirely exhaust soils. There is, however, a decrease in rate of formation of soluble material by continuous cropping with little or no return of fertilizing matter. Some recent experiments indicate that the addition of fresh manure to the soil does not immediately increase the water-soluble matter beyond that added by the manure. Considerable attention continued to be given to studies of the nature of soil acidity and the methods of measuring and correcting it. Hydrogen ion concentration measurements have been much used with variable results. A certain kind of acidity has been shown to be due to hydrolysis of iron and aluminum compounds. Whatever the cause of soil acidity, lime appears to be generally effective as a corrective. The rapid transformations which lime compounds undergo when applied to the soil have been the subject of much investigation. Recent investigation furnishes further evidence that growth of crops frequently depresses nitrification. The whole subject of conditions favoring or hindering bacterial activity in the soil has recently received further attention with results tending to emphasize the fact that among the primary requirements for beneficial bacterial action in soils are suitable supplies of lime, phosphates, and organic matter, and that it should be the object of good farm practice to furnish these. Soil aëration has been shown to have an important bearing on productiveness and plant distribution. Studies of soil air have shown that at a depth of 6 inches the air of the soil is very similar to that of the free atmosphere as regards the average content of carbon dioxide, although this constituent varies more widely in the soil than in the free air. At times, especially during active nitrification or in very warm weather, the soil air may be entirely deprived of oxygen, a condition which offers a serious obstacle to beneficial bacterial action and emphasizes the importance of aëration.

Partial sterilization of soils has been tested and recommended as a practical method of treatment of orchard and field soils in France. Carbon bisulphid and other liquid disinfectants have been used with good results for this purpose. In England the preference rather inclines to the use of heat as a sterilizing agent. A branch of the Rothamsted experiment station was established during the year under private endowment to make special study of sterilization of glass-house soils. Studies of the effect of steam-sterilized soil on plant growth at the Wisconsin experiment station led to the conclusion that while such sterilization may result in a short period of retardation of growth and in certain cases marked interference with normal growth,

beneficial effects usually follow, and hence "little hesitancy need be felt in recommending steam sterilization of soil for practical purposes."

SOLDIERS' SETTLEMENT ON LAND.

See AGRICULTURE; RECLAMATION, and AGRICULTURAL LEGISLATION.

SOMALI COAST. See FRENCH SOMALI COAST.

SOMALILAND, ITALIAN. See ITALIAN SOMALILAND.

SOMALILAND PROTECTORATE. A British protectorate comprising the Somali coast on the Gulf of Aden. Area about 68,000 square miles; population about 300,000, chiefly Mohammedan and wholly nomadic except on the coast where the chief towns are situated. The largest towns are Berbera with a population of about 30,000; Bulhara (7300); Zeyla (7000). Live stock is the main source of wealth. Imports in 1917-18 amounted to £282,715; exports, £206,476; revenue, £42,000; expenditure, £115,853; grant in aid for 1917-18, £83,000. Governor in 1919, G. F. Archer.

SONNINO, BARON SIDNEY. Italian representative at the Paris Peace Conference. He was at that time Minister of Foreign Affairs. He was born in 1847, his father being an Italian Jew and his mother an English woman. In his youth he served in Italian legations at Madrid, Paris, and Vienna. He became a member of Parliament at the age of 30, standing as a Liberal-Conservative, and attracted attention by his knowledge of social, financial, and economic affairs, especially of peasant conditions in Sicily. He favored as an agrarian policy the breaking up of the large estates. He was under-secretary for finance in 1887-90, and 1893-96 in the cabinets of Crispi, and he was afterwards minister of the treasury. In the latter office he acquired credit by his radical reform measures, but his prestige suffered along with that of Crispi, as the result of the Abyssinian disaster to the Italian arms in 1896. He led the opposition or the majority in Parliament for a period of 10 years, during which he was twice prime minister for a brief interval in 1906 and 1910. He assumed the office of foreign minister in November, 1914, and negotiated with Austria and Germany for the recognition of Italian claims. He also negotiated the London treaty with England, France, and Russia at this time, and concluded it after the negotiations with the Central Powers broke down.

SOUTH, UNIVERSITY OF THE. A Protestant Episcopal educational institution, founded in 1857 at Sewanee, Tenn. The enrollment in the summer session of 1919 was 37, and in the fall, 245. There were 23 members in the faculty, three being new in 1919. Productive funds amounted to \$683,615, and the income for the year was \$23,922. The library contains 38,158 volumes. There is now on a \$1,000,000 campaign for additional endowment. President, Rt. Rev. Albion W. Knight, D.D.

SOUTH AFRICA, UNION OF. A British dependency constituted under the South Africa Act of Sept. 29, 1909, as a legislative union, comprising the provinces of Cape of Good Hope, Natal, the Transvaal, and the Orange Free State. The area and population of the respective provinces, according to the census of 1911, were as shown in the table on the following page:

Province	Area (square miles)	Population—Census, 1911		
		Euro- peans	Native or colored	Total
Cape	276,966	582,377	1,982,588	2,564,965
Natal	35,291	98,114	1,095,929	1,194,043
Transvaal ...	110,450	420,562	1,265,650	1,686,212
Orange Free State	50,389	175,189	352,985	528,174
Total ...	473,096	1,276,242	4,697,152	5,973,394

A new census was taken, May 4, 1918, which gave the white population at 1,418,070, thus showing an increase of 141,828 over the census of 1911, of which increase 42,198 were males and 99,630 females. The density of the white population was 2.9 per square mile, and the density of the colored was estimated at 11.5 per square mile. No census of the colored people had been taken since 1911, but it was estimated that the number had increased to at least 5,500,000. The Europeans were distributed among the respective provinces as follows: Cape, 619,319; Natal, 122,008; Transvaal, 500,632; Orange Free State, 182,731. The distribution by sexes was: Males, 730,179; and females, 694,511. The capital and seat of the Union Parliament is Cape Town with a population in 1918 of 90,348, and the largest city is Johannesburg with a population in 1918 of 135,639. Other large cities with their population in 1918 are: Durban, 40,871; East London, 14,492; Pietermaritzburg, 18,527; Pretoria, 34,085; Port Elizabeth, 21,265.

POPULATION. The effects of the influenza epidemic in 1918 were recorded during the year as follows: Deaths among the white inhabitants August 1–Nov. 30, 1918, 11,726; or 8.2 per thousand; deaths among colored inhabitants, 127,745, or 27.19 per thousand; total deaths 139,471, or 22.8 per thousand of the colored and white population combined; total number of cases reported, 2,616,805, or nearly 43 per cent of the whole population. The chief sufferer was Cape Town where the number of deaths came to 6342 and where the death rate among the whites was greater than in any other city. In the mining city of Kimberley there were 4861 deaths.

EDUCATION. No recent figures for school attendance are available. The following table from the *Statesman's Year Book* of 1919 gives the number of statistics for the universities in 1918:

Institution	Teaching Staff	Students
University of Cape Town *.....	53	669
University of Stellenbosch *.....	41	552
University of South Africa *.....		
Rhodes University College †.....	21	143
Huguenot University College †.....	12	56
Grey University College †.....	15	129
Transvaal University College †.....	23	259
South African School of Mines and Technology †.....	31	179
Natal University College †.....	10	90

* Incorporated as such on April 2, 1918. † Constituent colleges of the University of South Africa.

MINING. Mining has always been the leading industry and until recently it has exceeded in value of output all the other industries put together, but as noted below the latter, which have rapidly advanced during the war, have reached the same level. The chief sources of mineral wealth have been gold-mining and diamond-mining. The total production of gold down to the end of 1917 was £553,270,439; and of diamonds,

£183,184,879. The mineral output for 1917 and 1918 is shown in the following table published by the United States Bureau of Foreign and Domestic Commerce.

Minerals	1917		1918	
	Tons	Value, \$	Tons	Value, \$
Gold.	9,018,389	186,424,300	a 8,418,217	174,017,845
Silver	a 908,146	598,341	a 877,498	772,873
Diamonds	b 2,902,417	37,649,049	b 2,543,735	83,876,008
Coal..	10,382,623	15,843,665	9,878,382	15,804,776
Copper	20,174	5,382,763	6,824	1,745,258
Tin..	2,688	1,827,980	2,230	2,179,958
Antimony	617	60,481	99	12,599
Arsenic, white...			18	8,560
Asbestos	6,220	425,157	3,674	262,971
Corundum	2,629	63,449	3,876	127,794

As will be seen from the above there was a falling off in 1918 from the year before of \$19,382,870, and this was chiefly in the gold and diamond industries. There was a decrease in the gold-mining operations on account of the rise in operating costs, as a consequence of war conditions which caused increased wages, higher cost of machinery, and shortage of explosives, and of native labor. With a view to making the public bear a share of the loss a petition was addressed to the imperial cabinet to subsidize the production of gold, but after a committee from London had investigated and reported on conditions, this proposal was rejected. The decrease in diamond production was due to the shutting down of the chief mines in October, November, 1918, when the influenza developed in the Kimberley region. It should be noted, however, that the exports of diamonds increased in 1918 as compared with the previous year. On July 15, 1918, the first blast furnaces for producing pig iron from the ore, went into operation at Pretoria. Prospects of the new industry seemed excellent as raw materials for it existed in the country, and the supply of ore has been reported by the government geologist as unlimited.

AGRICULTURE. The area under crops in 1917 was 23 per cent greater than in the previous year, the wheat product was placed at 5,500,000 bushels. The corn crop in 1917 was estimated at 36,000,000 bushels. Butter to the amount of 19,412,000 pounds, and cheese to the amount of 4,266,000 pounds were produced in that year. In 1918 the area under wheat was reported as 2 per cent greater than in the previous year, but the yield was estimated at about 10 per cent below normal or, in round numbers, at 8,580,000 bushels. Normal consumption of wheat, including flour, was placed at 11,100,000 bushels a year. In 1919 it was estimated that the deficit to be met by foreign wheat would amount to about 1,500,000 bushels. The acreage of corn was 11 per cent less than in 1917, and it was estimated at the end of 1918 that the crop would be 12 per cent below normal, or 31,200,000 bushels. Oats and barley were also below the previous year. Cotton cultivation has received more attention of late years, and the acreage was considerably increased during the year 1918–19. New cotton facilities were available in Zululand, where the first cotton-ginning plant was installed in September, 1918. The tobacco crop was reported to be considerably below normal toward the close of 1918. The entire production under normal conditions is 10,000,000

pounds. The production of sugar cane, however, was reported as normal in the season of 1917-18, when 130,000 tons were produced. The deficit for consumption in 1918 was 21,238 short tons, which was supplied almost exclusively from Portuguese East Africa. The dairy industry has changed of late years from the importing to the exporting stage. In 1913 large quantities were imported into the Union, whereas in 1917 some 3,000,000 pounds were exported. The production of 1918 was reported to be equal to that of the previous year, when it was 19,411,000 pounds, and the exports of butter, 1918, showed a considerable increase. Cheese also has shown a similar expansion, the exports during 1918 being valued at \$126,095 as compared with \$26,955 in 1917. The meat industry is still in its infancy, but considerable quantities were exported during the war. The number of cattle in the Union was placed in 1918 at 9,000,000. The number of sheep was placed in 1918 at 32,000,000. In 1918 the exports of scoured wool increased to 15,242,821 pounds, valued at \$13,587,881, of which the bulk went to the United States. See AGRICULTURAL EXPERIMENT STATIONS.

OTHER INDUSTRIES. During 1919 the figures of the industrial census for 1916-17 were published. According to these, industrial establishments in the Union numbered 5301, representing a capital investment of \$248,712,015, and the

up to the level of the mineral production, which hitherto had been regarded as the preponderant source of the country's wealth. Another important feature brought out by the census was the active interest shown throughout the country in industrial development, including demands put forth by important commercial interests, for a vigorous policy of encouragement for industry by tariffs and bounties, land settlement, and irrigation schemes, advertisement of the country's resources for purposes of attracting immigration, and by a survey of these resources for the purpose of encouraging exploitation. The number of employees in the 5301 establishments above mentioned was 123,842 in 1916-17 as compared with 101,178 in 1915-16. Of these 46,100 were Europeans, 12,229 Asiatics, 46,813 native blacks, and 18,700 other colored persons. The number of establishments in each of the respective colonies was as follows: Cape, 2540; Transvaal, 1718; Natal, 768; and Orange Free State, 375.

COMMERCE. The United States Bureau of Foreign and Domestic Commerce supplies the following information in regard to general trade statistics.

The value of the imports (not including government stores) and exports of merchandise into and from the Union of South Africa during the year 1917 and 1918 are shown by countries of origin and destination in the following table:

Countries	Imports		Exports	
	1917	1918	1917	1918
British Empire <i>a</i>	\$114,665,977	\$159,415,897	\$86,032,945	\$97,569,694
United Kingdom	88,718,242	124,885,466	67,024,913	75,098,197
Australia	6,155,412	5,725,105	664,924	1,010,757
British East Africa	241,025	676,526	258,193	1,047,417
British West Africa	5,422	448,570

Turkish Empire	49,137	58,802		
All other	289,521	203,854	638,379	1,439,923

a These totals include Rhodesia. *b* Included in "Other British possessions." *c* Included in "All other."

total production was valued at \$240,684,506, or an increase of \$44,000,000 over the previous year. This brought the industrial production

The total value of merchandise imported during each of the past nine years has been as follows: 1910, \$165,496,000; 1911, \$170,060,000;

1912, \$175,241,000; 1913, \$187,487,000; 1914, \$152,430,000; 1915, \$142,145,000; 1916, \$188,621,000; 1917, \$169,115,000; and 1918, \$230,659,000.

In 1918 the grand total of exports, exclusive of bullion and specie, was \$150,347,462—an increase of \$21,679,956, or 15.6 per cent. Of this total, \$140,703,830 represented South African produce and \$19,643,632 re-exported merchandise. The value of the raw gold output of the Union was \$154,374,213 in 1918. The "round" figures for the total exports of the past three years and of the three years immediately preceding the war are: 1918, \$314,722,000; 1917, \$311,940,000; 1916, \$296,419,000; 1913, \$311,532,000; 1912, \$294,339,000; 1911, \$264,413,000.

The six principal purchasers of South African products in 1918 were, ranking in order as named: United Kingdom, United States, Japan, Portuguese East Africa, Straits Settlements, and France. The United States took a large amount of South African goods which formerly went to Germany and Great Britain. In 1913 exports of produce from the Union of South Africa to the United States were valued at only \$2,609,500, as compared with \$29,142,000 in 1918. These figures do not include re-exported goods.

The total value of merchandise shipped from Union ports as ship's stores in 1918 was about \$11,938,000, as compared with \$14,500,000 in 1917 and \$10,403,000 in 1916.

The exports to the United States and the chief articles with their values in 1917 and 1918 were:

against dangerous occupations. A Cost of Living Commission, which investigated the causes leading up to the high cost of living, reported that one of these was the undue profits that have been made by wholesale merchants in foodstuffs, boots and shoes, soft goods, and hardware, and that these profits will tend to increase still further, both in percentage and amount, as prices continue to rise. The commission added that, to a smaller extent, undue profits have also been made by retail drapers, retail hardware merchants, Indian traders, outfitters, boot-and-shoe dealers, and chemists; however, bakers, butchers, and retail grocers have not made the profits they did in pre-war days, and many of the small firms have had a severe struggle for existence. It is also stated that during the war period the wholesale merchants had increased their control over the retail trade.

The commission dissented from the view that when normal conditions are restored inflated prices will automatically disappear. Consequently, they proposed that prices of necessities, whether imported or locally produced, should be subject to government control and that, by providing an independent check upon the businesses carried on by individual merchants, definite encouragement, and financial assistance should be given to approved co-operative enterprises. Such co-operative societies, it was suggested, would assist the government to ascertain what are reasonable margins between producers' and consumers' prices and also, by buying and selling in the same markets as individual merchants, would assist the consumer to satisfy his wants at reasonable

ECONOMIC CONDITIONS. The following information in regard to the cost of living, labor conditions, etc., is derived from the United States Bureau of Foreign and Domestic Commerce. An important factory act was passed by the Union Parliament in 1918 and went into effect on March 1, 1919. The law provided for the registration of all factories, for the hours of employment in general, and for those women and children in particular, specified public holidays, and took measures to insure sanitary conditions to prevent sweating and to protect employees

rates. To finance, control, and regulate these societies, it was added, a co-operative bank would be required.

All questions concerning the conditions of labor in the Union of South Africa are affected and in many instances complicated by the predominance of the native and colored elements of the population. The existence of this class of comparatively cheap labor has influenced the development of the country in various ways. The imported Indian laborers of Natal made possible the remarkable progress of the sugar industry,

supplied the tea planters with suitable workers, and provided much of the necessary labor for railway construction and coal mining. The gold mines of the Witwatersrand have been and are still entirely dependent upon the adequacy of the supplies of native labor, while in the industrial districts of the Cape Province, the colored

follows: Entered, 1036 vessels of 2,989,000 tons; cleared, 1004 vessels of 2,987,000 tons. The coast tonnage entered and cleared respectively was 2,541,000 and 2,517,000 tons.

FINANCE. The estimates for ordinary revenue and expenditures for the year 1918-19 are given in the *Statesman's Year Book* as follows:

Revenue		Expenditure	
Customs	£4,308,000	Governor-general and Parliament	£109,951
Excise	1,150,000	Ministerial Department of Prime Minister	
Posts, telegraphs, and telephones	1,926,000	and Native Affairs	309,990
Mining revenue	990,000	Ministerial Department of Defense	1,300,000
Licenses	114,000	Mines and industries	221,500
Stamp duties and fees	570,000	Higher education	180,530
Income tax, super tax, and dividend tax	4,000,000	Finance—Treasury	40,189
Estate and succession duty	200,000	Public debt	6,690,697
Native poll tax	830,000	Pensions	696,251
Native hut tax		High Commissioner	31,720

worker of mixed race has not only supplied very largely the demand for unskilled labor, but has in many cases qualified as a semiskilled artisan. The Union is almost entirely dependent upon native or colored labor for all work in the agricultural and pastoral industries.

As a result of the presence of this element of laborers, the position of the white worker has been limited to a considerable degree to the more highly remunerative lines of the skilled trades, or to the work of supervising and controlling the unskilled laborers. The unskilled white worker has found himself almost inevitably in competition with the native or colored laborer; forced to maintain a higher standard of living, but unable to command a sufficiently high rate of pay. Thus a class of "poor whites" has been produced in the country districts, tending to drift into the cities, and social and economic difficulties of a serious nature are a consequence.

The Union government maintains labor bureaus at all the principal centres for the purpose of assisting in the distribution of labor into the channels where it is most needed and where it will best benefit the laborer.

RAILWAYS AND SHIPPING. Since May, 1910, the railways of the several colonies have been under the control of the Union government, having been merged into one system. The mileage at the close of the year 1918 was 9541. There were also privately owned lines with a mileage of 496. During the year of 1918 the volume of passenger and freight traffic was larger than in any previous year, the total number of passengers being 4,996,842 and the freight, exclusive of coal, 6,720,244 tons. The coal traffic was 7,532,653 tons. The total expenditure for the fiscal year ending March 31, 1918, was \$87,957,121, and the total revenue \$82,788,898, thus showing a deficit of over \$5,000,000. This was attributed chiefly to the heavy expenditure brought about by the influenza epidemic, the high cost of material, and the large amount of idle stock. There was virtually no new construction of line during the year. The oversea shipping in 1918 was as

There was a marked increase in all the public expenditures during the fiscal year ending March 31, 1919. The original estimates of \$96,642,766 were revised to \$103,846,244. Though the revenue increase was also far in excess of the original estimate there was still a deficit of some \$300,000 at the close of the year. The deficit for the next financial year was far more serious according to the estimates which placed it at \$7,470,077, the estimate for revenue being \$100,391,028 and the expenditure \$107,861,106. The means for meeting this deficit were an increased duty on imported spirits and on colonial brandy; also an increased duty on beer and an increased export duty on diamonds. The public debt of the Union on March 31, 1918, was \$780,765,886 and during the fiscal year ending March 31, 1919, borrowings brought this amount up to \$815,074,711. The sinking fund on March 31, 1919, was \$44,408,412. As to the banking conditions the clearing-house returns from the chief cities of the Union in 1918 were considerably in excess of the figures for the previous year. On Dec. 31, 1918, the fixed and floating deposits showed an increase of 69 per cent in the course of four years.

GOVERNMENT. The executive government is administered by a governor-general appointed by the King, acting through an executive council chosen by himself. The legislative power is in the Parliament consisting of the Senate, and the House of Representatives, the Senate having 40 members of whom eight are nominated by the Governor-General in Council and 32 are elected, eight from each province, and the House of the Assembly having 130 members apportioned among the provinces and elected under provisions existing in the several colonies at the time of the Union. The Governor-General at the beginning of 1919 was Viscount Buxton of Newtimber. The Executive Council was made up as follows: Prime Minister and Minister of Native Affairs, Gen. Louis Botha (died, 1919); Minister of the Interior and of Public Works, Sir Thomas Watt; Minister of Defense, Gen. J. C.

Smuts; Minister of Mines and Industries, and of Education, F. S. Malan; Minister of Railways and Harbors, Henry Burton; Minister of Finance, T. Orr; Minister of Justice, N. J. de Wet; Minister of Posts and Telegraphs, Sir Meiring Beck; Minister of Agriculture, H. C. van Heerden; Minister of Lands, Col. H. Mentz; Minister without Portfolio, Sir J. A. C. Graeff.

HISTORY. A strike occurred toward the end of March at Johannesburg where the situation was said to be serious on account of the large number of Bolsheviks in the mining regions some of whom had declared the movement to be revolutionary and not merely a strike. The strikers took possession of the city's public services and set up a board of control. For a time the government seemed unable to do anything against them and they declared that they would continue their control of all the municipal services until their demands were granted. By the first of April however the strike was reported to be at an end. The Nationalist party continued its programme for the establishment of an independent republic. It decided to send delegates to England, but the vessel which was to carry them sailed without them, because the crew belonged to certain unions which absolutely refused to sail with the Nationalists on board. When the House of Assembly opened on February 17th, it was learned that the Commander-in-chief of the Cape station had offered to convey the delegation to Europe. This relieved the government from the criticism that a boycott of the Nationalists prevented their going to England to present their grievances. On the other hand it created a peculiar situation, for both the Senate and the Assembly had pronounced a complete condemnation upon the Nationalist movement as a movement for separation. Hence it seemed inconsistent that they should receive an offer of transport from a government vessel. The delegation was received on June 5th by Lloyd George who advised the deputation not to make any attempt to undo the past but to apply themselves to the development of their great country in the future, and declared that union in South Africa rested on a thorough understanding between the British and the Dutch.

SOUTH AMERICA. See under various South American countries.

SOUTHAMPTON ISLAND. See POLAR RESEARCH, *Arctic*.

SOUTH AUSTRALIA. A state of the Australian Commonwealth, occupying the central and southern part of the continent, south of the Northern Territory with Western Australia on the west and Queensland, New South Wales, and Victoria on the east. Area, 380,070 square miles; population at the census of 1911, 408,558; estimated June 30, 1918, 439,275, exclusive of those serving with the military who were placed at about 30,000. The natives are not included in the above figures. Their number in South Australia and the Northern Territory taken together, has been placed at about 20,000. The movement of population in 1918 was as follows: Births, 11,357; deaths, 4390; marriages, 3190. The capital and largest city is Adelaide, with an estimated population in 1917, including suburbs, of 225,317. The principal crops are wheat, hay, barley, oats, and wine. In 1916-17 the crops were valued at £13,828,432. Estimated wine production in 1917-18 was 5,322,000 gallons. Legislative power is vested in a Legisla-

tive Council and House of Assembly, the former consisting of 20 members, and the latter 46. The franchise was granted to women in 1898. In 1918 there were 132,043 women among the registered electors, making up a little more than one-half of the number. South Australia was the first of the states to put woman suffrage into practice. The executive authority is vested in a governor appointed by the crown, who acts through a responsible ministry. Governor in 1919, Lieut.-Col. Sir H. L. Galway; prime minister, A. H. Peake. See AUSTRALIA.

SOUTH CAROLINA. POPULATION. The population of the State in 1910 was 1,575,400, and on July 1, 1919, it was estimated to be 1,678,664, a gain during the twelvemonth of 17,000.

AGRICULTURE. The following table is compiled from a report issued by the federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu	Value
Corn	1919	2,340,000	37,440,000	\$73,757,000

EDUCATION. The total expenditure for educational purposes in the State in the year ending June 30, 1918, was \$3,905,244. In this year there were 2464 public schools for white children and 2408 schools for negro children. The enrollment was in 1918 194,687 white and 199,780 negro. The average attendance was white, 124,239, negro, 131,577. There were employed 5620 white teachers, 697 men and 4923 women; they received an average salary of \$721 and \$380 respectively. There were 3013 negro teachers, 656 men and 2357 women, with an average salary of \$148 and \$122, respectively. The State appropriation for schools in 1918 was \$497,500. In 1919 the State enacted an elaborate general School Law covering 100 pages of type.

TRANSPORTATION. The total railway mileage of the state in 1919 was approximately 3824. The longest roads were the Southern Railway, the Atlantic Coast Line, and the Seaboard Air Line.

FINANCE. The cash balance of Dec. 31, 1918, was \$818,537, and the total receipts for the following year were \$7,195,109. The expenditures amounted to \$6,913,500. The corporation tax netted \$65,755 during 1919. The public debt of the State on Dec. 31, 1919, was \$5,577,804; of which \$294,744 was principal past due.

OFFICERS. Governor, R. A. Cooper; Lieutenant-Governor, J. T. Liles; Secretary of State, W. B. Dove; Treasurer, S. T. Carter; Comptroller-General, R. L. Osborne; Attorney-General, Samuel M. Wolfe.

SOUTH CAROLINA, UNIVERSITY OF. A non-sectarian, co-educational institution located at

Columbia, S. C. The fall enrollment in 1919 was 549, and there were 36 members in the faculty. The income for 1919 was \$177,718. The library contains 60,000 volumes. The university was founded in 1805 by the General Assembly, as South Carolina College; in 1887 it became the university, with five schools and colleges. President, William Spenser Currell.

SOUTH DAKOTA. POPULATION. By the federal census of 1910 the population was 583,888; by the State census of 1915 it was 582,765; on July 1, 1919, the Federal Bureau of the Census estimated the population as 753,897.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn . .	1919	3,200,000	91,200,000	\$108,528,000
	1918	3,100,000	105,400,000	115,940,000

FINANCE. The report of the State auditor for the year ending June 30, 1919, shows the following facts: The balance on July 1, 1918, was \$3,144,924 and a year later it was \$2,649,026. The receipts during the year amounted to \$7,937,044, and the disbursements were \$7,441,146. The appropriations for the year 1919 amounted to \$4,162,455.

CHARITIES AND CORRECTIONS. The following is a list of the institutions conducted under the auspices of the State authorities: Blind Asylum, at Gary; School for Deaf Mutes, at Sioux Falls; Penitentiary, at Sioux Falls; Training School, at Plankinton; Hospital for the Insane, at Yankton; Soldiers' Home, at Hot Springs; School for the Feeble-Minded, at Redfield; Sanatorium for Tuberculosis, at Custer. South Dakota has a Board of Charities and Corrections.

OFFICERS. Governor, Peter Norbeck; Lieutenant-Governor, W. H. McMaster; Secretary of State, C. A. Burkhardt; Attorney-General, Byron S. Payne; Auditor, Jay E. Reeves; Treasurer, G. H. Helgeson; Superintendent of Public Instruction, Fred L. Shaw.

JUDICIARY. Supreme Court: Ellison G. Smith, James H. McCoy, Charles S. Whiting, John H. Gates, Samuel C. Polley. See CHILD LABOR.

SOUTH DAKOTA, UNIVERSITY OF. A co-educational State institution founded in 1881, at Vermillion, S. D. The enrollment for the summer session of 1919 was 100, and for the fall 800. The faculty numbers 67. The university owns 86,000 acres of land, the income from which is \$16,046. The expenditures for the year were \$194,049. The library contains 35,000 volumes. President, Robert L. Slagle.

SOUTH DAKOTA STATE COLLEGE of Agriculture and Mechanic Arts. A co-educational State institution situated at Brookings, S. D. The enrollment for the summer session of 1919 was 150 and in the fall, 905. The members of

the faculty total 80, exclusive of the Extension Department and the Experiment Station. The library contains 24,000 bound volumes and 8000 pamphlets. Among the new buildings to be completed is an \$80,000 armory; there is also a Stock Judging Pavilion, and an \$80,000 annex to the Administration Building, for the use of the Home Economics Department and offices, etc. The College was founded in 1881. President, Willis E. Johnson, LL.D.

SOUTH GEORGIA. See POLAR RESEARCH, *Antarctic*.

SOWAPA PONGSI, Queen dowager of Siam, died in November. She was born in 1864, and was the wife of the late King Chulalongkorn, and mother of the present sovereign. She was reputed to be a woman of great intelligence and of wide influence in the kingdom. During the war she had been president of the Red Cross.

SPAIN. A constitutional monarchy in southwestern Europe occupying the greater part of the Iberian peninsula and separated from France by the Pyrenees. Capital, Madrid.

AREA AND POPULATION. The country is divided into 49 provinces with a total area of 194,783 square miles of which 190,050 are on the Continent, the remainder comprising the Canary and Balearic islands and the Spanish possessions on the north and west coast of Africa. Population estimated on Jan. 1, 1917, 20,842,902, as compared with 19,950,817, in 1910. The three largest cities with their population on Jan. 1, 1918: Madrid, the capital, 648,761; Barcelona, 621,419; Valencia, 245,871. In 1917 births numbered 602,102, and deaths 465,819. The destination of emigrants has been for the most part Argentina, Cuba, Brazil, Uruguay, and Mexico. Spanish emigration statistics show that the number of persons leaving Spain for America, Asia, and Oceania, traveling third class, visibly diminished during the war. The emigration in 1918 was only 13.4 per cent of that during 1913. The figures follow: 1913, 151,000; 1914, 66,596; 1915, 50,359; 1916, 62,247; 1917, 43,051; 1918, 20,168. The following table shows the countries of emigration in 1913, 1917, and 1918:

Years	Argentina	Brazil	Cuba	U. S.	Uruguay	Various
1913	101,636	9,075	31,989	2,185	3,139	2,976
1917	8,677	868	28,251	3,772	850	1,133
1918	6,378	622	11,860	613	469	231

EDUCATION. According to the census of 1910, 59.34 per cent of the population could neither read nor write. No later figures for primary education were available than those given in the preceding YEAR BOOK. The number of public schools was 26,108 and of private, 5669, and the pupils numbered 2,604,308. Secondary education is provided by the middle-class schools of which there must be at least one in each province. They numbered 58 and had 52,015 pupils. There are 11 universities situated respectively at Madrid, Barcelona, Murcia, Granada, Salamanca, Oviedo, Santiago, Seville, Valencia, Valladolid, and Zaragoza and which are attended by 32,683 students. The total sum expended on education in 1917 was 76,758,479 pesetas.

PRODUCTION. Of the total surface 88.45 per cent is described as productive. One of the main features of Spain's agricultural conditions is the sub-division of the soil among a very large num-

ber of proprietors. The area under the principal crops and the yield for three years are given in the following table taken from the *Statesman's Year Book*:

	Acres 1916	Area Acres 1917	Acres 1918	Cwts. 1916	Yield Cwts. 1917	Cwts. 1918
Wheat	10,267,380	10,335,777	10,348,537	82,915,032	77,660,040	73,868,578
Barley	3,931,567	4,004,836	4,258,892	37,824,836	33,946,488	39,406,852
Oats	1,414,320	1,397,800	1,524,453	9,337,102	9,597,534	8,846,606

Tares	444,870	431,511	457,165	2,021,052	1,934,212	1,748,411
Vetches	125,010	161,558	159,472	879,332	1,122,028	996,522

Early in the year 1918 the Spanish government put into effect its policy for the control of the prices of foodstuffs. It forbade the export of a large number of agricultural products and it placed an export tax upon others. To stimulate wheat-growing it offered a bounty of \$1.80 for each acre planted in wheat during the season of 1918-19 in excess of that planted in wheat during the preceding season. The government fixed the selling prices of various cereals in the provinces. Local boards of supplies had been authorized in 1916 to fix the selling prices but the plan had not been successful and the control of the system was placed in the hands of the commissary-general of supplies, who alone could authorize the localities to prohibit exports. The maximum price of wheat fixed by the government was placed at \$72 per ton in warehouses or on board cars. The selling price of sulphur which was required for the vineyards was also fixed by the commissary-general. The yield of grapes in 1918 was slightly less than 1917 though much larger than the average yield following 1913. The total area under vineyards in 1918 was 3,254,780 acres compared with 3,198,351 in 1917. In grape production during 1918 Catalonia stood first with 1,194,186 metric tons, followed by New Castile with 922,885, and the Levante with 503,126. In 1918 3,818,229 metric tons of grapes were produced and of these almost all, namely 3,620,956, were devoted to wine-making. The amount of wine produced in 1918 was 596,168,764 gallons, compared with 627,737,238 gallons in 1917. The shipments of wine abroad were greatly reduced, common red and white wine falling from an export of nearly 157,000,000 gallons in 1917 to about 62,000,000 in 1918. There was a great decrease in the production of olives and olive oil. The olive crop in 1918 was only 1,403,831 metric tons as compared with 2,207,700 in 1917, but was about the normal crop, as that of 1917 had been far above the average. The area devoted to olive culture had increased over the previous year. On July 4, 1917, the government had prohibited for several months the export of olive oil except fine oils shipped in bottles and tins and in September, 1917, all export of oil was stopped. This embargo continued during the year 1918. The area sown in wheat in 1918 was 10,228,660 acres as compared with 10,339,961 owing chiefly to unfavorable weather conditions. The wheat crop in 1918 was 3,693,429 metric tons as compared

with 3,883,002. The area sown in barley in 1918 was 4,209,557 acres against 4,006,458 in 1917, and the amount raised in 1910, 1,970,343 metric tons as compared with 1,697,324 in 1917.

An estimate dated August 15, 1919, gave the following totals for the harvest of 1919, the quantities being in kilos of 2.2 pounds: Wheat, 364,526,850; barley, 172,945,570; rye, 62,577,580; oats, 41,824,520; carob beans, 9,192,130; bitter vetch, 5,177,730; lentils, 1,929,570; chick peas, 11,442,060; and broad beans, 16,096,720 kilos. This represents a falling off of 4,816,040 kilos in wheat, as compared to 1918, of 24,088,690 kilos in barley, of 14,756,290 kilos in rye, and 2,408,510 kilos in oats.

MINERALS. The total value of Spanish mining products in 1917 was three times that of 1908. In 1917 it amounted to \$245,383,732 of which the minerals mined amounted to \$87,923,572. The following table shows the quantity of leading minerals mined in 1916 and 1917:

Minerals	1916 Metric tons	1917 Metric tons
Iron	5,856,861	5,551,071
Soft coal	4,847,475	5,042,213

Ochre	800	780
Silver	275	96

^a Includes copper ore and ferrocupreous pyrites
^b Includes rock salt and products of salt works

The production of coal in recent years has greatly increased, the output in 1918 being 7,164,463 tons. The growth during the preceding six years is shown in the following table:

Years	Anthracite Metric tons	Soft coal Metric tons	Lignite Metric tons	Totals Metric tons
1913	232,517	3,783,214	276,791	4,292,522
1914	228,802	3,905,080	291,057	4,424,939
1915	222,621	4,135,919	328,213	4,686,753

^a Subject to revision.

The government assumed control of the potash beds in Catalonia in December, 1914, and in

July, 1918 a measure was passed providing for state control of such potash beds and other mineral deposits as could be adapted for use as fertilizers or for the manufacture of them.

The following information in regard to the coal industry in Spain is based on the report of the United States Bureau of Foreign and Domestic Commerce in the autumn of 1919. A commission had in charge the investigation of the productive capacity of the coal industry and the operating conditions of the mines with the view of recommending measures. It was made up of representatives of the owners' associations and miners' unions and the government inspectors of mines in each of the coal districts. Various plans had meanwhile been proposed by the coal miners and the coal operators, including nationalization of the mines, removal of prohibition on imports, restoration of the import duty and the transport tax, the establishment by law of the preference for native coal on the part of certain industries, especially the railroads, and the lowering of the rates by the railroads and coastwise carriers. In ordinary times the supply is derived partly from native coal and partly from imported, principally British. The cost of production of the native coal has been higher and its average quality lower than the imported coal. The average annual production of all kinds of coal during the period 1907-13 was 4,076,300 metric tons. The total in 1918 was 7,164,400 metric tons. As a result of the war the production of anthracite and lignite was more than doubled and the price of bituminous coal was increased 50 per cent. It appeared that as a result of the war the volume of coal irrespective of quality was almost sufficient for the national consumption and it was argued that it could supply the country's needs under adequate protection. During the previous five years the price had increased almost fourfold and the operators had made enormous profits. There was much speculation in mining shares and vast values were placed on properties that hitherto had been worth little or nothing. During the war many laws were passed for the purpose of keeping down the prices and insuring regular supplies. Thus maximum prices were fixed, bounties removed on exports and on shipments on the coastwise trade, preferred uses were designated, the import duty was abolished, and exports were prohibited. Immediately after the war importation greatly increased and there was for a time a falling off in production. In 1919 a movement for the nationalization of mines that seemed to be gathering force was started. The following argument was put forth by a Spanish expert on the subject:

Native coal does not satisfy the requirements of the market in quality, price, or regularity of supply. To many manufacturing plants, especially those using coal merely as a source of heat or for generating steam and which are equipped with automatic stoking and grate-cleaning devices, quality is secondary. But there is a great group of industries within which falls the steel industry where the quality of the coal has a controlling importance, because it constitutes an integral element of the metallurgical product and because it is a direct agent in the process. Native coal is relatively high in ash and sulphur. It yields less coke, and this coke is inferior for use in blast furnaces. The capacity of the furnace is reduced because of the greater specific consumption of coke, which is said to be one-fourth greater than with English coke. There is no other way to get around the low average quality of native coal than by utilizing the poorer grades in situ.

In the second place, we must consider the high cost of production at the mine. Much has been said of the

decreasing production of the individual worker, but this is a minor feature. The main cause of the constantly increasing prices is the geological formation of the coal beds. In general, the seams are thin and the measures are warped and broken by faults. Mining is carried on in accordance with modern practice, and very little can be done to remedy this characteristic. Lastly, we have the difficulties in connection with distribution arising out of the location of the mines, the deficiencies of the railroad system, and the scant density of the material, which, for the reasons already stated, cannot tolerate a heavy transportation charge. Utilization in situ presupposes the erection of coking plants with by-product recovery, the generation and distribution of electricity on a large scale, the consolidation of mines, and the investment of capital to an extent beyond the capacity of any private company.

RECONSTRUCTION. The policy of reconstruction was much discussed during the year. It comprised the following chief objects: First, nationalization of the main railroad lines and change of legislation in regard to the less important lines; second, regulation of concessions of watercourses; third, extensive appropriation for public works; fourth, changes in mining regulations; fifth, agricultural credit; sixth, organization of agricultural education and of reforestation; seventh, creation of an organized body to shape economic policies during the transition period. The minister of public works in April outlined the policy of social and economic reconstruction. This included the wide extension of public works such as roads, reforestation, hydraulic works, etc. The carrying out of these plans would require appropriations of some \$200,000,000. Also included in this project was the state construction of a large system of railways which were regarded as indispensable to the increase of production. This according to the plan would involve an issue of special railroad bonds to be guaranteed by the state. The government's policy looked ultimately to state ownership. The railways had been constructed on concessions running 90 and 99 years and after 25 years these lines would revert to the state. With a view to this reversion a plan was proposed that the state should take possession before the expiration of the term in return for compensation. This was proposed because the companies were financially powerless to execute the very extensive work necessary for the development of the system. It was expected that after this plan was put into effect double track lines would be laid and roads would penetrate into districts where natural resources could be exploited. As to the water power resources the government looked also to ultimate state ownership. In 1917 it was estimated that hydro-electric power to the extent of 500,000 horse power was being utilized in Spain, which was equal to about 2,000,000 tons of coal, a present value of \$80,000,000. It was necessary to exploit water power on account of the coal shortage. The government proposed that the state should acquire the right to appropriate all unworked concessions. This involved a division of the country into zones in each of which the companies were to form an association, the whole to be brought under the control of the government, with the object of nationalizing water power, which is now largely controlled by foreign capital. It was proposed that all concessions for the use of water power and mines must be limited to individuals and companies living in Spain.

The year 1919 was one of the most troubled periods in the recent industrial history of Spain,

strikes being almost constant throughout the year. At the very beginning of the year a serious strike occurred in the city and province of Barcelona, where at the end of February 100,000 people were reported to have been thrown out of work, and where the military intervened in order to maintain the public lighting and transport system of the city. See below under *History*; also the article *STRIKES AND LOCK-OUTS*.

COMMERCE. In 1918 the imports amounted to \$109,773,375; in 1917 to \$239,110,098. The exports in 1918 were \$170,626,895 and in 1917 \$234,602,052. The imports of gold bullion and coin in 1918 were \$6,094,570; in 1917 \$106,339,378. The decrease in value of the exports of merchandise was greatest in the raw materials whose value had been steadily depreciating since 1915. The raw materials which chiefly showed this falling off were stone, and earths employed in the arts and industries including gypsum, coal, petroleum, lubricating oils, phosphates of lime, etc. The importation of manufactured articles of all classes fell off. Foodstuffs also showed a large decline including especially salt pork, lard, bacon, corn, barley, and other cereals, sugar, coffee, and condensed milk. On the other hand there was an increase in the import of iron and steel wheels, lead, ground sulphur, jute, manila hemp, vegetable fibres, raw wool, and wheat. As to the decrease in exports it was largely the result of certain government measures noted below and of shortage of transport facilities, and it showed itself most acutely in foodstuffs which were more than one-half less than in 1917, especially in the case of sardines, rice, barley, corn, beans, and other vegetables, and olives, oranges, wine, and fodder, etc., but there was also a decrease in the export of partly manufactured articles especially of cast iron and forged iron and steel products, chemical products, soap, cotton yarn, woven garments, etc. The decrease of exports caused suffering both in agriculture and manufacturing districts, which was only partially offset by an increase of exports of certain articles, namely cement, manganese ore, salt, nuts, and dried fruits.

The exports to the United States in 1918 were \$21,600,114 and in 1917 \$39,025,276. The following table shows the declared exports to the United States, the Philippine Islands, Porto Rico, and Hawaii, in 1917 and 1918:

SHIPPING. The vessels entered in 1917 were 14,207 with a tonnage of 9,683,257 and in 1918 12,475 with a tonnage of 8,745,084. Vessels cleared in 1917 were 14,876 with a tonnage of 9,738,294, and in 1918 13,836 with a tonnage of 7,203,843. The Spanish merchant marine consisted on Jan. 1, 1918, of 580 vessels and 780,767 tons. The highest point was reached in 1915 when there were 857 vessels with 904,727 tons, but it decreased steadily until Jan. 1, 1918. As to the war losses the number of vessels torpedoed during the war down to June, 1918, excluding those of less than 250 tons, was 51 with 123,176 tons and the number of vessels lost by mines was 6 with 16,731 tons. Spanish shipping was to a large extent requisitioned by the government during the war, for the purpose of distributing raw materials and finished products according to the greatest needs. Before 1918, 180,000 tons of shipping had been placed at the disposal of the government by the ship-owners. A committee was appointed to determine the number and names of the ships which should make up this tonnage. The position of each ship was reported and the ship-owners were required to recall any vessel when it was requisitioned by the committee. The coastwise lines were organized and a large amount of shipping, estimated at 250,000 tons' capacity, was designated for this purpose. A measure to preserve in native hands the Spanish merchant marine was the prohibition of the sale of Spanish ships to foreigners. This had formerly been confined to certain classes but during the war was applied to all vessels flying the Spanish flag. On June 12, 1918, a royal decree provided for the requisition of the entire Spanish merchant marine to carry such materials as were deemed of vital interest to the country and freight contracts could be canceled or suspended when the ships were called into the service.

RAILWAYS. Railways in Spain had a mileage in 1917 of 8993 miles, of which 6880 were of the usual gauge and 2106 of varying gauges. In 1918 only about 14 miles of new road were built. The development of the railways is one of the most important economic questions in Spain. It has been proposed to lay double tracks from Madrid to various points on the coast such as Barcelona, Valencia, Cadiz, etc., as an indispensable means of opening up the trade of the country. The cost of this project is placed at over \$600,000,000, and the time required for com-

Consular districts	To United States		To Philippine Islands		To Porto Rico

pletion was estimated at five or six years. The government on March 8, 1918, authorized the laying of the tracks of the first three sections of the line across the Pyrenees from Ripoll to Puigcerda and a new line was proposed from Zafra to Villanueva del Fresno. The year 1918 was financially unsatisfactory to the railroads for while the profits were high, the running expenses were higher still.

FINANCE. Revenue for 1917, \$409,059,190; expenditure, \$413,049,441. Revenue for 1918, \$331,263,367; expenditure, \$334,181,563. Budget estimates for 1919-20: Revenue, 1,648,800,068 pesetas; expenditure, 2,065,065,606 pesetas. National debt on Jan. 1, 1919: 9,421,586,036 pesetas of which 911,100,000 pesetas were external debt.

The budget estimates for 1919-20 as indicated above showed a very considerable deficit. At the close of the year the deficit as shown by these figures was causing much unfavorable comment in consequence of which the ministry resigned. The distribution of taxes also caused discontent among the people.

GOVERNMENT. Executive power is vested in the king, who acts through a council of ministers, and legislative, in the Cortes or parliament of two houses, the Senate and the Congress. The King Alphonso XIII was born May 17, 1886, his succession dating from his birth. The ministry as constituted April 15, 1919, was as follows: Prime Minister, Señor Maura; Foreign Affairs, Señor Gonzales Hontoria; Justice and Worship, Viscount Matamala; War, General Luis Santiago; Marine, General Miranda; Finance, Señor La Cierva; Interior, Señor Goicoechea; Public Instruction, Señor Silio; Public Works, Señor Gallardo Ossorio. See below.

HISTORY

CATALANIAN QUESTION. The independent spirit of Catalonia which in late years has shown itself in forms dangerous to the existing government dates back some 50 years when an attempt was made to revive the Catalanian speech. In its origin it is based on the tradition of independence but from the political point of view it is economic in its nature. The revival of the Catalanian language 50 years ago manifested itself in various meetings of the literary and aristocratic classes where the Catalanian language was spoken. A literary club was founded which became a sort of academy of the Catalanian language. The so-called floral games were instituted; everywhere people began to interest themselves in the Catalanian dialect; and poets sang the traditional exploits of Catalanians. Gradually there developed out of this literary movement a movement for self-government and a similar tendency showed itself in other parts of the kingdom but it was stronger in Catalonia than elsewhere. In business and political circles the question of an independent administration for Catalonia constantly came up for discussion and two tendencies showed themselves; the first conservative and the other liberal and progressive. The conservative looked to an independent local government at Barcelona and dreamed of a sort of leadership over the rest of the country. The advanced liberals favored a federal republic somewhat on the model of Switzerland. During the war the aspirations of the Catalanians were intensified

and from being merely local in their scope developed a nationalist spirit. In that part of Spain there was much sympathy with the Allies on account of their programme in respect to the protection of small nationalities. When the war turned in favor of the Allies the chiefs of the different Catalanian parties from the extreme conservatives on the one hand to the republicans on the other united for the purpose of demanding from the central government a grant of Catalanian sovereignty including the complete administrative, judicial, and parliamentary independence of the region. An attempt was made to interest President Wilson and obtain the support of the League of Nations. The conservatives threatened the monarchy with the setting up of a republic and suppression of payment of taxes and of the regular administration and even warned it that on Jan. 1, 1919, a provisional government would be established in Catalonia. Not one of these threats however was carried out, for in the first place the army took a firm stand against the Catalanian nationalists of all shades, and in the second place economic and social conditions cast the Catalanian programme into the shade. Catalonia on an average produced manufactured products in normal times to the amount of 1,700,000,000 pesetas and sold by far the greater part of them in other parts of Spain. The independence of Catalonia would bring about a boycott as it was unpopular throughout the rest of Spain and this would ruin the region. Hence the people did not respond to the demand of their leaders when called upon to take these radical measures. The conservative Catalanians having failed, the republicans thought that they might carry their point but they soon saw that they had behind them only a small fraction of the army. Moreover the mass of the workingmen who formerly trusted them had during the last four years become absorbed in the trade union movement. Among the strongest partisans of Catalanian independence were the members of the employing classes and these were opposed to the programme of the trade unions. The central government meanwhile pursued the policy of compromise toward the workingmen and made important concessions. It was thus lined up with the working classes against the element which was fighting for the independence of Catalonia. A lock-out at Barcelona was examined as a strike on the part of the small proprietors of unionized shops which had for its aim the establishment of an absolute government and was thus opposed to a policy which would bring Spain into harmony with France and England. That this policy had been resolved upon by the government was indicated by the visit of the king to Paris and London in the autumn of 1919. In short the government at the close of the year seemed to have checkmated the extremists in Catalonia by concessions to the moderate demands for local self-government throughout Spain including Catalonia, and by concessions at the same time to the laboring classes. It appeared to have public opinion behind it and the Catalanian members of parliament were in its favor.

MINISTERIAL CHANGES. As noted in the preceding YEAR BOOK a new ministry was formed by Count de Romanones after the fall from power of the Marquis de Alhucemas on December 3d. It showed itself favorable to labor and

to: this reason encountered sharp opposition and obstruction in the Cortes which finally led to the suspension of parliament on February 27th. Meanwhile labor difficulties throughout the country went from bad to worse and serious disorders took place in Barcelona, Madrid and Valencia, among other cities (see below). On March 25th the country was declared under martial law. The disorders in Barcelona proved to be too serious for the government to control, and it was also unable to carry out its obligations in regard to the budget. It fell from power and was succeeded in April by a coalition ministry under the extreme Conservative Prime Minister Señor Maura (for personnel see above under *Government*), but this cabinet was unable to secure the support of parliament chiefly on account of the hostility to the Minister of Finance, Señor La Cierva who belonged to the extreme reactionary group. Finally after a formidable May day demonstration a crisis occurred, parliament was dissolved, and new elections were held on June 1st resulting in the return of a chamber in which the majority was Conservative. It was constituted as follows: Conservatives, 233; Liberals, 110; Reformists, 12; Republicans, 16; Regionalists (Catalonia), 15; Carlists, 5; Independents, 6. At first it was thought that the elections had strengthened the ministry but opposition soon developed and when the members of the Left attacked it on the ground of election frauds it lost its majority and resigned. It was succeeded by another Conservative Ministry under Joaquin Sanchez Toca, confidential adviser of the king. At the beginning of December there was a preliminary crisis in the ministry. The difficulty arose from the fact that the war council had pardoned 17 officers of the general staff who had been dismissed on account of breach of discipline. The military Junta thereupon called upon the government to dismiss these officers from the army. All the infantry officers including the generals demanded that the accused should be placed in retirement and the general in Madrid made this request of the ministry. The minister of war thereupon resigned and the cabinet followed by offering its own resignation. Upon the request of the king it consented to remain in office for the present, but soon afterwards, on account of opposition to the budget it definitively resigned. It was succeeded on December 12th by a new ministry constituted as follows: Prime Minister, Manuel Allende Salazar; Interior, Fernandez Prida; Foreign Affairs, Marquis de Lema; Finance, Count de Bugallal; War, General Villalba; Navy, Admiral Flores; Public Instruction, Natalio Rivas; Justice, Garnica; Public Works, Amalio Gimeno.

LABOR TROUBLES. The labor problem was the chief issue before Spain and observers declared that if it were not intelligently solved it would certainly involve a condition of anarchy. Hence many writers advised the government to enter upon a programme of public works, not for the purpose of providing employment, but as a means of economic development, because the welfare of the country depended upon highways, railroads, irrigation, etc., Spain being one of the most backward countries in these respects. It was argued that the government by securing foreign aid in these developments would win support at home and friendship abroad.

Trade unionism had during recent years made

remarkable progress, and had developed powerful organizations with headquarters at Barcelona, which threatened to control the entire economic life of the country, and which were causing politicians great anxiety. The industrial rising of 1917 failed chiefly on account of lack of funds, and in the beginning of 1919 the organizations were rapidly accumulating resources with a view to carrying their first movement to success. It was reported that within the 12 months between 60 and 70 managers and employers had been assassinated and that not a single one of the murderers had been convicted. According to the reports in the papers the method followed was to present a demand on the part of the working-men, summoning the employer to meet a deputation, and upon his appearance shots would be fired from the crowd and the employer killed in such a way as to leave no means of identifying the murderers. On February 27th the situation at Barcelona was exceedingly grave, syndicalists having seized practically all the machinery of supplies, and the city being dependent only on engineering battalions of the army for such facilities of light, water, and power as could be obtained. On the afternoon of February 27th Count Romanones suspended the sittings of the Cortes. A bakers' strike in Madrid led to the declaration of martial law, and the taking over of the bakeries by the government on March 1st. Within a day or two, however, order was reported to be restored and martial law was lifted.

The measures which the government took against the great strike in Barcelona were. First, the suspension of guarantees; second, the proclamation of a status of war, and third, the mobilization of the strikers. These measures which increased progressively in seriousness were of no avail whatever. The result of the third measure, that is to say, the calling of the strikers to the colors, was simply to anger them to the point of resistance. As many as 600 of the 1500 who were subject to mobilization refused to obey, and had to be imprisoned. The struggle had developed to a point at which, if one side or the other had not yielded, civil war would have resulted. Meanwhile new strikes were breaking out with great rapidity over the entire country, a new one occurring, according to reports, every 24 hours. Finally, in the middle of March, the government conceded practically to all the demands of the strikers. The agreement, according to newspaper dispatches, included the release without punishment of the men who had been imprisoned for resisting mobilization. Meanwhile, the organization of labor had been rapidly extended in Spain, and had reached a point at which it was running effectively. In March fighting occurred in the city of Barcelona between the trade unionists and the military authorities aided by volunteer citizens. The trade unionists in control established a strict censorship and for a time none of the newspapers appeared.

The difficulties continued through the summer and autumn and culminated on November 3d in a lockout on the part of the employers. This closed practically all the factories in Barcelona. It appeared that both sides were well organized and determined, but it was said that the organization on the part of the workingmen

was more complete. The trades' unions included professional men as well as laborers, and comprised a membership in Barcelona alone of some 200,000, including employees of the great textile and other factories. The claims of the workingmen comprised among other things a demand for better social conditions. On the other hand the employers maintained that the unionists were carrying on a reign of terror, and that workingmen in every branch of industry and trade had been forced to join by threats of violence. They also declared that the government had not properly protected them in carrying on their business. On November 3d, only two out of the nine important journals in Barcelona, and these of radical tendencies, were published, the others having locked out their employees.

SPAIN AND FRANCE. In certain quarters during the year there was speculation on the subject of an alliance of the Latin Powers to offset Pan-Germanism on the one hand and a supposed Anglo-Saxon combination on the other, but there was no sign that the sense of racial kinship was strong enough to outweigh the divergent interest of the Latin countries. It was plain that Italy and France were not brought into any intimate union by the war, but on the contrary had more or less conflicting purposes. In regard to Spain there were occasional arguments for a Franco-Spanish alliance, but nothing came of them. During the war Spain had not shown the slightest regard for any racial tie with France. On the contrary it was believed quite generally in France that all the upper classes and the well-to-do in Spain sympathized with Germany. The French press abounded in instances of this throughout the war. The King was friendly to the Allies and there were signs of Pro-Ally sentiment among the lower classes. The French press attributed to the King the remark that he and the rabble were the only ones in Spain that favored the Allies. According to the French press the man who spoke French in the Spanish peninsula during the war was actually regarded with disfavor. When the Allies had won the victory there was a change in Spain and many professed pro-Ally sentiments in classes that had hitherto been pro-German. The Marquis of Romanones, as noted in the previous YEAR BOOK, was sent in haste to Paris after the armistice in order to safeguard the interests of Spain. He returned reassured that Spanish interest would not be disregarded. His movement was attributed to a fear on Spain's part that France and Great Britain would make her pay dearly for her pro-German attitude, and that she ran the risk among other things of losing Morocco. Alfonso XIII paid a visit to France in 1919 and was everywhere received with marks of sympathy. Nevertheless in spite of the desire for friendly relations with France and if possible an alliance, Spain through certain organs made a proposal that was not well received by the French—namely, that Tangier which has been under an international régime should be ceded to Spain. This was characterized as absurd by many French publicists. While they admitted that changes in the status of Tangier might be made, and that France might consent to a more complete guarantee of Spanish interests there, there could be no question of its cession to Spain. It was the true port of Morocco and France could not consent, according

to these objectors, to practically cutting off the head of her colonial dependency, and presenting it to Spain. The French argued also that recent military experience of Spain in Morocco did not bear favorably on this Spanish claim. Spain had just made a great effort in the Riff region, spending hundreds of millions and losing thousands of soldiers, and yet had failed to pacify the country. Giving her Tangier would confirm her in an ambitious colonial policy that she had not the means to realize. Moreover, in Spain itself was a powerful political element strongly opposed to a colonial empire and anxious that Spain should retrench rather than extend her policy of expansion. Count Romanones had said that the new conditions and the great economic struggle in Spain required the country to establish close and firm relations with its neighbors, and with the nations which as the result of their victory would control the markets of the world. The guarantee of Spanish prosperity as well as of political security was a good understanding with France, Great Britain, United States, and the Spanish-American countries.

THE QUESTION OF OLIVENZA. The city of Olivenza, capital of the province of Badajoz, six miles from the Portuguese frontier, was assigned to Portugal by the treaties of 1815, but Spain refused to surrender it and it remained in her power. Toward the close of the year it was the subject of dispute on account of the demand of the former president, Machado, that it should be restored. The Portuguese government preferred this demand and the Spanish government replied that it was impossible to grant it for historical reasons. See OLD AGE PENSIONS; STRIKES AND LOCKOUTS; TRADE UNIONS.

SPANISH LITERATURE. Already we feel the beneficial effects of peace on the literary activity of Spain, at least so far as bulk is concerned. The official figures of the *Bibliografía Española* for Nov. 30, 1918, showed 1127 titles. For the corresponding date in 1919 (the last to reach us), they are 1256.

NECROLOGY. Spanish letters and scholarship have again paid heavy tribute to the grave; and again the loss has been heaviest in Spain's former colonies. Too late for insertion in our account for 1918 we received news of the death (in October), of Julio Caeleño, founder and perpetual secretary of the Venezuelan Academy. He was the dean of all the Corresponding Members of the Royal Spanish Academy of the Language in all the Americas, and a staunch supporter of the necessity of maintaining in Venezuela the pure Castilian tradition in matters linguistic. The untimely death (he was only 49 years old), of Amado Nervo, the Mexican diplomat accredited to Argentina and Uruguay, deprives Mexico of a personality who was hailed by Spaniards as one of the glories of twentieth century Spanish literature and the leading Spanish-American poet since the death of Rubén Darío. Through the death (in August) of Federico Hanssen, Director of the Instituto Pedagógico Nacional of Santiago, and recognized authority in Spanish historical grammar, dialectology and metrics, Chile has lost her leading Hispanist. The death of Ricardo Palma of Peru took from us the dean of Spanish-American writers. Born in Lima in 1833, throughout his long life he served faithfully and brilliantly his country and mankind in general. After having studied the humanities and jurisprudence, he

served (1872-1876) as Senator, and (1884-1912) as Director of the National Library of Peru. He founded the Peruvian Academy and was Director thereof until his death. Spain recognized his services by corresponding membership in the Real Academia Española, and the Real Academia de la Historia, and by dubbing him Knight Commander of the Real Orden de Isabel la Católica. Aside from his many other literary productions, he created a new genre, the *tradiciones*, a form of short story in which he reproduced the brilliant pageant of the social and political life of the vice-royalty in its hey-day. The Spanish Royal Academy suffered four serious losses: in May, Eduardo de Hinojosa, investigator of juridical questions in Spanish history and literature; in June, Augusto González Besada, statesman, critic, and historian of Gallegan literature, and later Javier Ugarte (who had taken his chair only a year ago), and Francisco Commelerán (the Academy's Censor, and the oldest of its members), professor of Latin and Castilian in the Instituto Cardinal Cisneros and author, among other things, of a *Diccionario clásico-etimológico-latino-español*.

LITERARY CRITICISM, in one form or another, was again fairly well represented: Andrenio (pen-name of Gómez de Baquero), *Novelas y novelistas*; R. Pérez de Ayala, *Política y toros* (very keen analysis of various phases of modern Spanish life); J. Sánchez Rojas, *Castilla y Cataluña* (study of regionalism, pointing out what Castile and Catalonia have to offer each other); G. Zaldumbide, *José Enrique Rodó* (careful study of the life and works of this great Uruguayan); R. Cansinos-Assens, *Poetas y prosistas del novecientos* (concerning Spanish and Spanish-American writers), and *El divino fracaso* (volume of essays); Max Henríquez Ureña, *Rodó y Rubén Darío* (the distinguished Dominican writer, now resident in Cuba, gives not only a whole-souled appreciation of these two great Spanish-American writers, but also two useful bibliographical catalogues), and *El ocaso del dogmatismo literario*; José Montero, *Pereda* (a detailed study); Luis Antón del Olmet y José de Torres Bernal, *Palacio Valdés* (in the series *Los Grandes Españoles*); Eugenio d'Ors, *Grandes y servidumbre de la inteligencia*; Quintiliano Saldaña, *Miguel de Unamuno* (vol. i of a series called *Mentalidades españolas*); Juan Cueto, *De mi ideario* (which the author calls *Dirigaciones de un militar demócrata alrededor de varios temas de actualidad*, and which represents the progressive and pro-Ally ideals of an important element of the rising generation in Spain); El Caballero Audaz, *Lo que sé por mí* (Series 7 and 8 of these essays); Tomás Navarro Tomás, *La fonética experimental en España—Manual de pronunciación española*; Julio Casares, *Crítica efímera* (two vols. of scholarly grammatical and lexicographical notes, with a prologue by R. Menéndez Pidal); N. Alonso Cortés, *Zorrilla, su vida y sus obras* (vol. ii, dealing with the period 1845-71, during which Zorrilla had some of his most interesting experiences in the old world and in the new); R. Menéndez Pidal, *Manual de gramática histórica española* (4th ed., revised and enlarged) and *Crónicas generales de España* (3d ed., thoroughly revised and enlarged); J. Cejador y Frauca, *Historia de la lengua y literatura castellanas* (vol. ix, x, xi, dealing with the period from 1870 to 1907, and paying considerable attention

to Spanish-American writers); Rufo Mendizábal, *Monografía histórico-morfológico del verbo latino*; Francisco A. de Icaza, *Sucesos reales que parecen imaginados* (series of studies awarded a prize by the Royal Academy); Alvaro Alcalá Galiano, *El fin de la tragedia: La "Entente" victoriosa y España neutral*; Pío Baroja, *Las horas solitarias* (following his personal confessions in *Juventud* and *Egotría*, he gives us here a kind of diary of his thoughts during one year), and Rafael Altamira, *Libro de máximas y reflexiones* (the frank, intimate outpourings of a mature mind and a great heart).

POETRY offered somewhat less of interest: Rafael Lasso de la Vega, *El corazón iluminado y otros poemas*; Pablo Cavestany, *Madrigales*; F. Mon Ibáñez, *Bajo la Estrella Roja (Poesías de la guerra)*; Ramón del Valle-Inclán, *La Pipa de Kif*, and a new volume of the *Obras* of Juan Ramón Jiménez, *Piedra y cielo* (1917-18).

DRAMA presented some very good material. Manuel Linares Rivas won a brilliant success with his *Cobardías* in which he attacks all kinds of moral cowardice on the part of the good, who permit the triumph of the wicked. He also successfully dramatized, in collaboration with the original author, the novel of Alejandro Pérez Lugín, *La Casa de la Troya*, which, as was reported in these columns in 1916, was awarded the Fastenrath Prize of that year by the Royal Academy. The Alvarez Quintero brothers have continued to produce scintillating plays, among which we mention *Febrerillo el loco* (a keen study of the effects of the passion for wealth) and *La Calumnada* (which was a great success as staged by María Guerrero and Fernando Díaz de Mendoza). The two brothers have published also a volume entitled *La madrecita—cuadros de costumbres* (only about half the volume represents the drama). G. Martínez Sierra produced *El corazón ciego*, and Eduardo Marquina gave us *La morisca*, a lyric drama. Both were well received. Four plays by Jacinto Benavente should be mentioned: *La ley de los hijos*, *Richelieu* (a well-received adaptation of Bulwer Lytton's *Richelieu*), *La restal de occidente*, (dealing with the reign of Queen Elizabeth); and *Por ser con todos leal, ser para todos traidor* (treating of the first sparks of independence in Spanish-America).

FICTION fared somewhat better than the other genres. Pío Baroja continued his *Memorias de un hombre de acción* with the volume *La Isabelina*, which treats of Madrid at the death of Fernando VII. A. Hernández Catá registered a double success: *Fuegos fatuos (Novelas)*, and *Los siete pecados (Cuentos)*. The *Jardín de las hadas* by Alvaro Alcalá Galiano is a volume of fantastic tales à la Oscar Wilde. G. Martínez Sierra, in addition to the drama previously mentioned, published *Pascua Florida*, a novel. Vicente Blasco Ibáñez, despite his travels, produced the bulky novel *Los enemigos de la mujer*. Azorín is beginning the publication of his *Obras*, and the first volume bears the title *El alma castellana*. It contains some of his best work. The journalist E. Gómez Carrillo is likewise collecting his *Obras completas*, and the first volume is called *El libro de las mujeres*. José Más, with *La Estrella de la Giralda* and *La Orgía* (3d ed.), both dealing with Sevilian life (as had also his first novel, *La Bruja*, now in its 2d ed.), is hailed as a new novelist of whom much may be expected. Guillermo Díaz-Caneja

was awarded the annual Fastenrath Prize by the Royal Academy for his novel *El sobre en blanco*, which has been very well received by the critics.

The Spanish Royal Academy completed its series of fac-similes of first editions of works of Cervantes, destined for use in the general competition for a glossary of the works of Cervantes, by producing volume VI, containing *Persiles y Sigismunda* and the *Viaje al Parnaso*. It continued its new edition of *Obras de Lope de Vega* (edited by Cotarelo), with volume V, containing a few hitherto unpublished plays, and many that have not been reprinted since the seventeenth century. The "Chirel" Prize was awarded to a volume of articles relating to customs and written by Wenceslao Fernández Flórez, under the title of *Las gafas del Diablo*.

SPANISH OPERA. See Music, Opera.

SPIRITUALISTS' ASSOCIATION. An association whose belief is that "spiritualism is the science, philosophy and religion of continuous life based upon the demonstrated fact of communication, by means of mediumship, with those who live in the spirit world." It was incorporated in 1892 to nationalize the work of local Spiritualist societies in the United States and to expand the movement. The 27th annual convention was held in Pittsburgh, Pa., on Oct. 21-25, 1919, and was considered highly successful, much enthusiasm over the work and progress of the past year being shown. Legislation in all States for the protection of the Spiritualists as a religious denomination was strongly urged. Trustee Mark A. Barwise, Curator of the Bureau of Phenomenal Evidence, submitted a report on the work of the bureau during the year. He and his assistants are collecting for publication signed evidences of spiritual manifestations, with the ultimate idea of using this material for propaganda, and to convince critics of the movement. The organization had in 1919 over 1000 local working societies. State organization is maintained in 22 States beside 500 other local societies, and 32 camp meeting associations. There are more than 200 churches and temples, together with camp meeting property, valued at about \$6,500,000. There are about 500 ordained ministers, with 1500 public mediums, and 600,000 adherents. The officers elected for 1920 were: President, George D. Warne; secretary, George W. Kates; treasurer, Cassius L. Stevens. The headquarters of the association are in Washington, D. C.

SPITZBERGEN. This archipelago has risen from its anomalous position as No Man's Land to the dignity of a dependency. The Supreme Council in Paris, acting on the recommendation of its Spitzbergen commission, approved on November 21st an agreement granting to Norway political suzerainty over the archipelago. This proposition gave rise to parliamentary enquiry in England, where some opposition to such award developed but the British government declared that the conditions adequately safeguarded British interests. Discovered by the Dutch, occupied by England during the whale fishery, and exploited later by Russian hunters, the archipelago was practically abandoned to the scientific and exploratory work of the Scandinavian nations. The discovery of easily worked semi-bituminous coal fields awakened interest in this Arctic land about 20 years ago, and the invasion of the archipelago by exploiters

naturally caused conflicts, as there existed neither law nor government. The pre-war conference on the sovereignty of Spitzbergen was fruitless owing largely to excessive claims by Germany. Although other minerals are said to be present in quantities of economic value, attention has been devoted to coal. An output of some 40,000 tons in 1912 had increased in 1918, despite war conditions, to shipments of 100,000 tons to Scandinavian ports alone. The coal areas preëempted and claimed by the various nationalities are approximately: British companies 4000 square miles, Norwegian 900 square miles; Swedish 350 square miles, and Russian 100 square miles. The large American interests have been sold to European companies. The German holdings were seized by Great Britain during the war. Mines are worked throughout the entire year. Game is said to be practically exterminated.

SPOONER, JOHN COIT. Prominent United States Senator died in New York City, June 11. He was born at Lawrenceburg, Ind., Jan. 16, 1843, and graduated at the University of Wisconsin in 1864, afterwards studying law at Yale and Columbia Universities. He fought in the Civil War and was brevetted major in the Wisconsin infantry. In 1867 he was admitted to the bar and for many years practiced in Wisconsin. He was a member of the Wisconsin Assembly in 1872. From 1882 to 1885 he was a regent of the University of Wisconsin and in the latter year was elected United States Senator. He was elected again in 1897 and retained his seat till 1907, after which he resumed his law practice in New York. He was one of the most prominent of the Republican Senators and was distinguished as a lawyer. He was a member of the British American Joint High Commission in 1898.

SPORTS. Articles covering the activities in the various sports during the year 1919 will be found under such titles as **ATHLETICS, TRACK AND FIELD; BASEBALL; BOWLING; FOOTBALL; GOLF; ROWING; TENNIS; YACHTING, ETC.**

SQUASH. See RACQUETS.

STATE BANKS. According to the Annual Report of the comptroller of the currency, there were in the United States on June 30, 1919, a total of 21,338 State, savings, and private banks, and loan and trust companies, an increase of 163 over the previous year, and of 1019 since June 20, 1917. Total resources were \$26,381,000,000, as compared with \$22,371,000,000 on June 29, 1918, an increase of 17.9 per cent. Loans and discounts aggregated \$13,981,000,000, an increase of about \$1,500,000,000 over 1918. Other items of resources were: other investments (bonds and securities), \$7,178,000,000; cash on hand, \$572,898,000; checks and other cash items, \$447,386,000; due from banks, \$2,788,000,000. Capital stock paid in amounted to \$1,319,000,000, an increase of 5.25 per cent over 1918. Total capital stock paid in, surplus, and undivided profits, were \$2,972,000,000, as compared with \$2,762,000,000 the previous year. Individual deposits were \$20,828,000,000.

Regular commercial State banks numbered 17,225, an increase of 637 over June 29, 1918, and of 1245 since June 20, 1917. The aggregate resources of these banks were \$11,701,606,000. Individual deposits were \$8,999,000,000; loans, discounts, and investments in bonds and securities totaled \$8,983,000,000.

Loan and trust companies numbered 1377 on June 30, 1919. Their aggregate resources were \$7,960,000,000, with loans and discounts amounting to \$4,091,000,000, and investments in securities \$2,070,000,000. Their total paid-in capital stock was \$450,499,000; surplus, \$491,915,000; undivided profits, \$96,765. Individual deposits amounted to \$5,694,000,000, and they held postal savings deposits to the amount of \$6,133,000.

Private banks numbered 1017 on June 30, 1919, a decrease of 74 since June 29, 1918. Their aggregate resources were \$266,122,000, and their total deposits were \$216,590,000, both of these items showing a slight increase.

See also BANKS AND BANKING, NATIONAL BANKS, AND SAVINGS BANKS.

STATISTICAL ASSOCIATION, AMERICAN.

The importance of statistical work during the war and the need revealed for new and more adequate sources of statistical information has greatly enlarged the scope and field of the American Statistical Association among business and private organizations. The last year has seen a large increase in membership and activity. At the Annual Meeting in Richmond, Va., held in December, 1918, the Constitution was amended to provide for a class of corporate members with annual dues of \$100. The following corporations accepted the invitation of the Association to become corporate members: The American Telephone & Telegraph Co., Westinghouse Electric and Manufacturing Co., General Motors Co. The Association has been active in favoring certain improvements in the taking of the census, and in the nature of Federal statistics, especially, the collecting of data regarding the increasing output of manufacturing plants in the United States.

The 81st annual meeting was held in Chicago, Ill., in conjunction with the American Economic Association, American Sociological Society, American Association for Labor Legislation, American Association for University Instructors in Accounting, and the American Association for Agricultural Legislation, December 29-31. The Presidential Address was given by Joseph A. Hill on "The Essentials of a Good Census." Discussions and papers were heard dealing with criminal statistics and records, a continuous census of production, cost of production statistics, and the scope, standards, and methods of statistical usage.

The officers of the association for 1919-1920 are: President, George E. Roberts; Vice-Presidents, Carroll W. Doten, Horace Secrist, Louis Meriam; Secretary-Treasurer, Robert E. Chadlock, Kent Hall, Columbia University, New York City. The organization completed 80 years of activity on Feb. 13, 1919.

STEAMBOAT-INSPECTION SERVICE, UNITED STATES. The United States Steamboat-Inspection Service during the fiscal year ended June 30, 1919, inspected and certificated 7407 vessels with a total gross tonnage of 11,562,166, of which 7134 were domestic vessels with a total gross tonnage of 9,128,911, and 273 were foreign passenger steam vessels with a total gross tonnage of 2,433,255. Of the domestic vessels, there were 5880 steam vessels, 709 motor vessels, 17 passenger barges, and 528 seagoing barges. There was an increase of 392 in the total number of vessels inspected and an increase of 3,097,470 in the total gross tonnage of vessels inspected as compared with the previous fiscal

year. Letters of approval of designs of boilers, engines, and other operating machinery were granted to 23 steam vessels with a total gross tonnage of 672. There were inspected for the United States government 79 hulls and 2337 boilers. There were 2053 reinspections of passenger and ferry steamers. Licenses were issued to 28,069 officers of all grades. There were examined for visual defects 9753 applicants for license, of whom 108 were found color-blind or with other visual defects and rejected. Certificates of service were issued to 8796 able seamen, and 760 were rejected. Certificates of efficiency were issued to 3910 lifeboat men, and 314 were rejected.

Steel plates for the construction of marine boilers to the number of 35,427 were inspected at the mills, and a large amount of other boiler material was inspected. There were examined and tested 435,337 new life preservers, of which number 8311 were rejected. See SAFETY AT SEA.

STEEL. See IRON AND STEEL.

STEEL STRIKE. See IRON AND STEEL; STRIKES AND LOCKOUTS.

STEFANIC, DOCTOR MILAN. Astronomer, died in an aeroplane accident while passing from Italy to the capital of his native State Slovakia. He had been formerly attached to the Meudon Observatory. In 1906 he went to the observatory at Mont Blau, where he made important observations. In 1910 he established the observatory in the Island of Tahiti where he observed the solar eclipse of 1911. He was made a general in the French army.

STEINWAY, CHARLES HERMAN. Piano manufacturer died in New York City October 30. After 1896 he was the president of the firm of Steinway & Sons of New York City. He was born in New York City June 3, 1857, educated in the United States and abroad, and entered the firm in his youth. From 1878 to 1896 he was vice-president of the company.

STEPHENS, HENRY MORSE. Historian and educator, died at San Francisco, April 16. He was born in Edinburgh, Oct. 3, 1857, and educated at Balliol College, Oxford. He became known as a contributor to the leading periodicals of England and as the editor of the magazine *India*. He lectured in Oxford University under Extension System from 1890 to 1894 and he lectured on Indian history at Cambridge, England, from 1892 to 1894, when he became professor of modern European and English history at Cornell University. After that he remained in the United States. He delivered the Lowell lectures of 1900, 1905 and 1909, and he was made president of the American Historical Association in 1915. For 10 years, namely from 1895 to 1905, he was one of the editors of the *American Historical Review*. Among his works may be mentioned: *History of the French Revolution*, (vol. i, 1886; vol. ii, 1892); *The Story of Portugal*, (1891); *Albuquerque* (in *Rulers of India Series*, 1892); *Revolutionary Europe, 1789-1815*, (1893); *Syllabus of a Course of Lectures on Modern European History, 1600-1890*, (1899, with Prof. A. L. Lowell); *Colonial Civil Service*, (1900); *St. Patrick at Tara* (a forest play, 1909). He edited: *Principal Speeches of the Statesmen and Orators of the French Revolution*, (1892, with Prof. G. B. Adams); *Select Documents of English Constitutional History*, (1901, with Prof. H. E. Bol-

ton); *The Pacific Ocean in History; Addresses and Papers Read before the Panama-Pacific Hist. Congress*, (1915).

STEVENS INSTITUTE OF TECHNOLOGY. A non-sectarian institution for the technical education of men, located at Hoboken, N. J. In the fall of 1919 there were 780 students, and 45 members in the faculty. Thirteen new instructors were added to the staff. The library contained 15,000 volumes and pamphlets. Productive funds, \$1,500,000, income from all sources, \$218,933. The two brick barracks erected during the war by the government are now the property of the Institute and are being converted to care for the increased enrollment. The alumni have established the first of four scholarships in memory of Stevens men who died in service. The endowment of these when complete will be \$40,000. Stevens was founded in 1870. President, Alexander C. Humphreys, LL.D.

STEWART, JULIUS L. Painter, died in 1919. He was born in Philadelphia Sept. 6, 1855. He studied in Paris and received medals at the Berlin Exhibitions of 1891 and 1895. He was the recipient of many other prizes and honors, and was a member or officer of important art societies. He was an officer of the Legion of Honor, and long a resident of Paris.

STIRLING, Sir EDWARD C. Australian physiologist and ethnologist, died at Adelaide, South Australia, March 20. He was born in South Australia Sept. 8, 1849, and educated there and at Trinity College, Cambridge. He studied medicine at St. George's Hospital, London, and was lecturer there on physiology. He was afterwards professor of physiology at Adelaide University, South Australia, consulting surgeon at Adelaide Hospital and director of the South Australian Museum. He traveled throughout Australia and published the result of his observations and discoveries. Among his works may be mentioned a report on the anthropology of central Australia and a report on the Horn and scientific expedition.

STOCK-RAISING. See LIVE-STOCK.

STOCKS AND BONDS. See FINANCIAL REVIEW.

STODDARD, TAPPAN. American chemist and educator, died at Northampton, Mass., December 9. He was born at Northampton, Oct. 20, 1852, graduated at Amherst College in 1874 and studied in Germany in 1877. He was professor of chemistry and physics in Smith College, 1881-97, and professor of chemistry from 1897 to the time of his death. His writings are as follows: *Outline of Qualitative Analysis*, (1883); *Lecture Notes on General Chemistry* (2 vols. 1884, 1885); *Quantitative Experiments in General Chemistry*, (1910); *The Science of Biliards*, (1913); *Introduction to General Chemistry*, (1910); *An Introduction to Organic Chemistry*, (1914).

STORY, JULIAN. Painter, died at Philadelphia, February 24. He was born in England in 1858, and educated at Edinburgh and Oxford. He received honorable mention in the Paris Salon, 1889, and thereafter won frequent honors by his work, including the silver medal of the Buffalo Exposition in 1901 and of the San Francisco Exposition in 1915. One of his sisters was the celebrated singer, Emma Eames, whom he married, but from whom he was afterwards divorced.

STRAITS SETTLEMENTS. A British crown colony in Malaysia, composed as follows:

	Sq M	Pop. 1911	Pop. 1917	Capital
Singapore ...	307	311,985	369,182	Singapore
Penang ..	571	278,003	298,413	Georgetown
Malacca ..	720	124,081	145,198	Malacca
Total ...	1,598	714,069	812,793	Singapore

The estimated populations for 1918 were as follows: Singapore, 369,777; Penang, 302,042; Malacca, 149,052; total, 820,871. Under the administration of the Straits Settlements are the Cocos Islands and Christmas Island, and since 1907 the colony of Labuan has been annexed. The island of Singapore has an area of 217 square miles, and to it are attached a number of small adjacent islands. The seat of government is the city of Singapore at the southwestern point of the island. Penang has an area of 108 square miles, but under its administration is Province Wellesley on the opposite coast of the mainland. The chief town of the Penang settlement is Georgetown. Malacca is a strip on the western coast of the peninsula lying between Singapore and Penang, and has a length of 42 miles and a width of from 8 to 24 miles. The leading city of the settlement, and one of the most important ports of the Far East, is Singapore which comprises the greater part of the population of the island of Singapore. As to the distribution of population by race the most numerous element is the Chinese. In 1917 there were 425,679 Chinese; 266,228 Malays, and 92,407 natives of India. The following trade statistics for 1916-17 are taken from the *Statesman's Year Book* for 1919:

	Imports	
	1916	1917
Singapore	£51,172,271	£61,596,036
Penang	15,841,688	18,080,655
Malacca	2,389,074	2,713,033
Labuan	169,987	179,614
Christmas Island ..	35,120	26,581
Dindings	151,733	124,069

	Exports	
	1916	1917
Singapore	£44,527,415	£57,382,266
Penang	14,513,648	18,115,809
Malacca	4,458,451	5,220,993
Labuan	161,387	127,361
Christmas Island ..	113,053	137,541
Dindings	59,497	57,946

Revenue (1917) £2,295,079; expenditure, £1,326,429. The debt stood on Jan. 1, 1918, at £6,913,352, which had been borrowed for public works, and £4,907,432 as a war loan. Governor at the beginning of 1919, Sir Arthur Henderson Young.

STRAUS, RICHARD. See MUSIC, Austria.

STREATFIELD, RICHARD ALEXANDER. An English writer on music, died in London, in February. He was born at Carshalton, in 1866. For 30 years he was assistant in the British Museum, and from 1898-1912 musical critic of the *Daily Graphic*. Of his books the best known is *The Opera* (a history).

STREET RAILWAYS. See MUNICIPAL OWNERSHIP; RAPID TRANSIT.

STREETS. See ROADS AND PAVEMENTS.

STRIKES AND LOCKOUTS. The period since the signing of the armistice has been marked by an increase in the use of the method

of the strike and lockout to compel the satisfactory settlement of industrial disputes. The strike and lockout have never been as marked in major industries as during the last six months of this year.

Figures for the first six months of 1919 have been issued by the Bureau of Labor Statistics. These show that, while there were not so many strikes in 1919 as in 1918, they were of much greater importance. The totals are 1572 in 1919 as compared with 1811 in 1918. However, beginning with the month of May, the number of strikes in 1919 exceeded those in 1918. As usual, New York City led in the number, with Chicago second, and Detroit, Boston, Cleveland, Seattle, Toledo, Omaha and Philadelphia following. In by far the greater proportion, only males were affected. Although the strikes occurred in practically every industry, seven strikes stand out with special prominence. Also see ARBITRATION AND CONCILIATION; TRADE UNIONS

SEATTLE GENERAL STRIKE. A general strike was called in Seattle on February 6th of 45,000 union men, in sympathy with 25,000 shipyard workers who walked out on January 21st to enforce demands for higher wages. Street cars, schools, restaurants, theatres, newspapers, and other industries were forced to suspend operations, while the culinary unions established soup kitchens to feed the strikers and others who might be dependent upon them for food. The significant figure in the strike was Mayor Ole Hanson, who declared that any person interfering with the municipal functions would be shot on sight, and who sent an ultimatum to the strikers that, unless the sympathetic strike was called off by February 8th, he would take steps to operate all essential industries, and would place the city under control of Federal authorities. In the meanwhile, the strike spread to Tacoma and to San Francisco, where 8000 shipyard mechanics walked out. By February 8th, 75,000 men had struck in Seattle, and the city was placed under martial law. A Citizen's Committee was appointed to deal with the strikers. Mayor Hanson took steps to alleviate conditions, and street cars started running again on February 9th. Through the efforts of the Committee, the strikers returned to work on February 11th, without having gained their object. The original shipyard strike continued until March 10th, when it was compromised.

BOSTON POLICE STRIKE. On Sept. 9th, 1500 policemen in Boston struck as a means of enforcing the recognition of their newly formed union and of their right to affiliate with the American Federation of Labor. Rioting and disturbance immediately resulted, and a Provost-Guard was brought from the navy yard to quell the disturbers. On the following morning, Mayor Peters issued a proclamation calling on all law-abiding citizens to help the authorities to maintain order. Nevertheless, many stores were broken into, and citizens robbed. On September 10th the city was placed under martial law, and cavalry and 5000 members of the State Guard constantly patrolled the streets. On Sept. 11th, there was further disturbance, and Gov. Coolidge telegraphed the Secretary of War and the Secretary of Navy asking for Federal military assistance in case the State Guard was not sufficient. On September 12th, President Compers of the American Federation of Labor, re-

quested that the policemen return to *status quo* until after the Industrial Conference (see ARBITRATION AND CONCILIATION). However, the positions of all policemen were declared vacant, and a new police force was developed, largely of returned soldiers, at an increased wage scale.

ACTOR'S STRIKE. The refusal of the managers of the New York theatres to recognize the Actors' Equity Union, resulted in a strike early in August. There was much bitter feeling and one manager sued the actors for \$500,000 to cover losses sustained by the producers through the closing of the theatres. Chicago theatres promptly joined in the dispute. On August 17th, stage hands and musicians walked out in a sympathetic strike in New York City, where 16 theatres were forced to close. At this time, Federal mediators undertook the settlement of the trouble. The strike was settled September 6th, on the basis of the open shop, the demands as to salaries, overtime, and pay for rehearsals were mostly granted and arbitration of any further trouble was provided for. On September 7th, all the New York theatres were reopened.

STEEL STRIKE. On September 22d, a steel strike was called, affecting 268,710 employees in the steel industry scattered through the various States where plants are located. Claims had been advanced by the union covering collective bargaining, wages, hours, conditions, and principles involved in the industry. Judge Gary of the Steel Corporation refused to confer with these men on the grounds that the union-leaders were not authorized to speak for a large number of his employees, and that such a conference might be interpreted as a recognition of the closed shop. Much damage was done and there was rioting throughout Pennsylvania. An investigating committee was appointed by the Senate, which learned that the strikers were eager to arbitrate, but that the Steel Corporation refused to arbitrate, since a "question of moral principle cannot be arbitrated or compromised." In Gary, on October 4th, conditions grew so bad that General Wood was called to take charge of the situation. From that time on, the men gradually returned to work, and the trend was in favor of the employers. At the end of the year, although the strike was not officially ended, the mills were in operation, and the trouble had been subdued.

LONGSHOREMEN'S STRIKE. Between 4000 and 5000 longshoremen employed on North River piers in New York City, went out on strike October 7th, without warning and against the orders of their leaders, demanding an increase in wages. By October 9th, some 25,000 men were out, and shipping was badly tied up. Subsequently, the number of those on strike increased to 70,000 and their idleness kept 30,000 other men from working. Tons of food spoiled on the piers. On October 11th, the strike was spreading along the coast, threatening Baltimore, Boston, and Norfolk. On October 15th, the longshoremen accepted an offer of a 9 per cent increase and voted to return to work, but only 5000 actually did so. October 17th was marked by violence. On October 18th, a conciliation commission was named, consisting of Mayor Hylan, Paul Vaccarella, and James L. Hughes. On October 21st, 500 regular troops were landed to do guard duty, and unload ships. After much violence and internal trouble, the union receded from its extravagant demands,

CAVALRY AND INFANTRY KEEP TRAFFIC MOVING IN THE BOSTON POLICE STRIKE

and the strike ended November 4th, with a compromise increasing wages 22½ per cent. There had been 495 ships tied up in New York harbor.

PRINTER'S STRIKE. Ten thousand pressmen were locked out on October 1st by 250 printing firms in New York City, after the local unions had been outlawed by their international unions for refusal to abide by their contracts. The local unions demanded higher wages, and a 44-hour week. Many publications, including prominent magazines, were affected, more than 150 magazines and 300 trade papers being tied up. The strike was settled on November 25th by the printers and pressmen returning to work under orders of their international officers at an increase of \$6 per week. They had demanded \$14 and refused to arbitrate a demand for the 44-hour week.

COAL STRIKE. On Oct. 6, 1917, the operators and miners in the coal mining industry signed an agreement which was to be in force for the duration of the war. On Oct. 24, 1918, Fuel Administrator Garfield refused a wage increase to bituminous workers. On Sept. 22, 1919, the United Mine Workers' convention adopted demands for a 30-hour week and 60 per cent increase in wages, and instructed the officials to call a general strike November 1st, in case a satisfactory agreement were not secured by that time. From September 25th-October 24th the operators and workers were in joint wage conference without agreement. On November 1st, a strike of 425,000 bituminous miners began. The Indianapolis Federal Court, on an immediate application of Attorney-General Palmer, issued a temporary order restraining the miners' officials from directing the strike, and on November 8th, the same court issued an injunction ordering the recall of the strike order. On November 11th, this order was recalled, and on November 14th, a joint conference reopened. This conference was unable to reach any agreement. However, at the end of the year, the dispute was to be settled by a court of arbitration, although, on December 22d, the Executive Committee of Coal Operators denied that they had agreed to accept President Wilson's plan for adjustment, which was "to refer the matter under dispute to a board of arbitration for determination." Due to the drop in coal production, it was necessary to return the country to the war basis of conservation of fuel, and Fuel Administrator Garfield issued drastic orders against unnecessary consumption of coal.

GREAT BRITAIN. Figures given in the *Labour Gazette* for September, 1919, show huge increases in labor disputes during 1919. Three times as many people were involved as in the previous year, and seven times as many work days lost. The totals from January to August are: In 1919, 1029 disputes as compared with 815 in 1918; 1,885,000 work people involved as compared with 658,000; 23,145,000 work days lost as compared with 3,438,000. Largest trouble was found in coal mining, having 865,000 workers involved in disputes, textiles with 488,000 and engineering and shipbuilding, with 240,000.

The important strikes were: 150,000 coal miners January 9th-22d for a stoppage of 20 minutes per shift for meals, and other concessions which were granted; 100,000 miners March 24th-30th with a national demand for wages, lower hours, and the nationalization of mines,

which was set aside pending the miners' national ballot offered by the government; 190,000 shipbuilders, starting in January and ending gradually, demanding wages and hours with varying results; 450,000 textile workers June 23d-July 10th, demanding increase in wages and lower hours, which was compromised; 75,000 coal miners July 21st-27th, demanding a change in piece-rates, which was compromised; 150,000 coal miners July 16th-August 12th, demanding increase in piece-rates which was compromised; 500,000 railway employees September 25th-October 5th, objecting to governmental reduction of wages, and obtaining a continuation of wages on a war basis. For coal situation, see INDUSTRIAL RECONSTRUCTION.

CANADA. The *Monthly Labor Review* for May summarizes the report of the Canadian Department of Labor for 1918. In that year, there were 196 strikes in the Dominion, as compared with 148 in 1917. The number of employees involved shows an increase from 48,329 to 68,489. However, these strikes were more rapidly settled, and there was a reduction in workdays lost from 1,134,790 to 763,341 days.

Of these 196 strikes, 72 were due to requests for increased wages, 12 for recognition of union, 13 were sympathetic strikes. Most of the strikes were of minor importance, 89 per cent involving less than 1000 employees, and 36.7 per cent being settled in less than five days.

It is worthy of note that 113 strikes were terminated in favor of the employees, 41 in favor of the employers, and 42 were compromised or undetermined. With regard to the means of settlement, 102 were settled by direct negotiation, 34 by conciliation or mediation, 21 by arbitration, and four by boards of conciliation.

JAPAN. Osaka, the principal industrial centre of Japan, experienced a series of labor disputes during the summer. The average increase in wages demanded was approximately 30 per cent. In almost every case the workmen were met at least halfway by the employers and the duration of the strikes was seldom over two days. Over 11,000 workmen employed in nine establishments struck in July, and 2000 in six establishments early in August. Most of the actual or threatened strikes were limited to individual concerns, although there were instances of specific trade strikes, such as that of the stonemasons and that of the coopers. Coöperation between workpeople belonging to a number of concerns engaged in the same industry is impossible because of a police regulation prohibiting the instigation of any strike. In a few cases, a society known as the Yu-Ai-Kai (Friendly Society), took up the case of its members and arranged terms with the employers, but in the case of a dispute in an electrical machinery works in Kyoto, the society had to hand over the task of mediation to the Chief of Police. This strike lasted five days, the longest of any in that district.

ITALY. Labor disturbances began early in July, when food rioters were fired upon by carabinieri on July 4th. Shops were sacked, occasioning a damage of more than \$100,000 and the red flag was hoisted in Tuscany and Romagna. Mob violence increased. A general strike was declared in Naples, but lost impetus, due to the voluntary cutting of prices by the shopkeepers and the issuing of a decree by the Italian King inflicting a penalty of 10,000 lire

(\$1930) for all food profiteers, and the government compliance with the demand of the strikers that the supply trains for Kolchak armies in Siberia be held up. In anticipation of a general strike called by the Labor Confederation for July 20th-21st, 50,000 armed citizens were organized in Florence, thus preventing activity.

SPAIN. According to censored dispatches, the Congress of Spanish Employers, sitting at Barcelona, declared a lockout on October 26th, to take effect throughout Spain on November 4th, affecting over 1,000,000 workers, and closing all the principal industries, trades and professions, even schools and public works. The lockout went into effect. It was stated on November 13th that the opposing organizations had come to terms, but two days later, the rupture was renewed by strikes succeeding the general lockout. This act on the part of the employers was aimed at the Confederacion General del Trabajo, the General Federation of Labor—an organization of great secrecy, described in the press as “ruling by assassination.”

SWEDEN. Sweden has been undergoing a long series of industrial disputes and strikes. In January, there were strikes among the sailors and engine-drivers which assumed serious dimensions. A threatened strike by the railway men was averted by the government only by the granting of important concessions. Soon after, came a long strike in the Swedish match industry and among the stevedores at Gothenburg, as a direct outcome of the International Stevedoring Congress in Holland, which directed a blockade of all goods classed as war material. The most serious trouble was the printers' strike which lasted two months, resulting in the reduction of all papers. The fight was finally won by the owners. In the first week in October, a lockout was declared in the wood-working trades, in which all conciliatory attempts proved unsatisfactory. In the meantime, labor legislation has been given additional impetus by the enhanced importance of labor.

STURGE, WILLIAM ALLEN. A British ethnologist, died in 1919. He was born at Bristol in 1850, studied medicine, and practiced for nearly 30 years at Nice. He was the author of various papers on medical subjects, and an authority on pre-historic implements and weapons in stone and bronze.

STYRIA. A former crownland of Austria before the downfall of the Austro-Hungarian Empire. Area, 8662 square miles; population at the census of Dec. 31, 1910, 1,444,157; estimated, 1913, 1,467,758. In 1910 the Austrian subjects numbered 1,394,699, of whom 70.5 per cent spoke German and 29.37 per cent Slovenian. Capital, Graz, with an estimated population of 156,500. The territory was incorporated in the new Jugoslav state. See JUGO-SLAVIA.

SUBMARINES. See NAVAL PROGRESS.

SUBWAYS. See RAPID TRANSIT.

SUDAN, ANGLO-EGYPTIAN. An African territory under British authority, situated between Egypt and Uganda, and extending from the Red Sea to the limits of Wadai in central Africa. Capital, Khartum. Area, about 1,014,400 square miles; population, estimated, 1917, at 3,400,000. The chief towns are Khartum with 16,325 inhabitants in 1917; Omdurman, former Dervish capital, with 84,022; Khartum North with 10,828. Reported values of imports and exports in 1917 were £E3,102,117 and £E3,490,565 re-

spectively. Revenue and expenditure according to the budget estimates of 1918, balanced at £E2,255,000. Total length of railway, about 1500 miles. Acting Governor-General and Sir-dar at the beginning of 1919, Maj. Sir L. O. F. Stack.

On December 21st it was reported that a battalion of British troops in Sudan had suffered reverses resulting in the death of two officers and between 20 and 30 soldiers. On November 15th, the Equatorial Battalion under Major White was attacked by a considerable force of tribesmen, losing seven killed and nine wounded, and again on December 8th when the natives fell upon the advance guard of the column and drove it back. Later reports indicated that the column was advancing without further resistance.

SUGAR. This commodity continued to be a source of concern the world over. There was a world shortage compared with pre-war production, estimated at about two million tons, as there had been since the war began. There was practically no diminution in this shortage in the 1919-20 crop. As the shortage is equivalent to about 13 per cent of the normal crop its effect is widely felt in all countries dependent on imports.

Sugar was scarce and high in European countries, many of them being on a sugar ration. In the United States there was much difficulty in securing supplies throughout the year, and the demand was unusually large, attributed to prohibition and to hoarding. Prospect of the relinquishment of control through the dissolution of the Sugar Equalization Board at the close of the year led to apprehension and the expectation of higher prices, but a bill continuing the board through 1920 passed Congress. The per capita consumption of sugar in the United States, judging from the first nine months, was equivalent to about 92 pounds for the year, against 73 pounds in 1918, 83 pounds in 1917, and nearly 87 pounds in 1914. This would indicate an increase of about five pounds per capita since 1914. The Sugar Equalization Board estimated that the United States consumption in 1919 would be over half of the world's total exportable surplus and over one-fourth of the total world's production.

The world's sugar production for the crop year 1919-20, as estimated by Willett and Gray in December, was 12,305,394 tons of cane sugar and 4,084,000 tons of beet sugar, a total of 16,389,394 short tons as compared with 16,418,580 tons in 1918-19, and 17,287,577 tons in 1917-18. The cane sugar crop of Louisiana was less than half that of 1918. The total cane sugar crop of the United States, including the Virgin Islands, was 1,056,631 tons; that of Cuba, 4,300,000 tons; the British West Indies, 218,000 tons; the French West Indies, 55,000 tons, and Santo Domingo, 180,000 tons. The estimates for other leading countries were as follows: Mexico, 85,000; Central America, 30,000; South America, 792,000; Asia (including the Philippine Islands), 4,600,763; Australia and Fiji Islands, 335,000, and Africa, 582,000 tons. The beet sugar crop in the United States was estimated at about 800,000, as compared with 674,892 in 1918, and 682,867 in 1917. The total European beet sugar crop shows an increase of about 600,000 tons over 1918-19, but is still far short of the pre-war production.

The war gave quite an impetus to the dis-

cussion of the need for home grown sugar in England. It was one of the scarcest commodities, and a year after the armistice the Food Ministry was obliged to ration it. An estate of nearly 6,000 acres was purchased by the Sugar Beet Growers' Society with the financial assistance of the government, and is to be developed as a test of commercial beet growing on a large scale.

The importance of the growing of sugar beet seed in the United States has increased in view of the European shortage. Although nearly six thousand acres of beet seed were grown in 1918, yielding over 6,000,000 pounds of seed, it has been necessary to import about twice as much seed as was grown at home. In 1919 there was a production of approximately 6,000,700 pounds of seed, which was somewhat less than earlier estimates. A bulletin entitled *The Sugar Beet Industry in the United States*, by C. O. Townsend, was issued by the U. S. Department of Agriculture (No. 721), and another (No. 726) on *Farm Practice in Growing Sugar Beets in Three Districts in Colorado*, 1914-15. A manual entitled *The Sugar Beet in America*, by F. S. Harris, was published during the year (New York, 1919). See also **FOOD AND NUTRITION**.

SULPHUR. Sulphur to the amount of 1,353,525 long tons was mined in the United States in 1918, compared with 1,134,412 long tons in 1917 and 619,683 in 1916. The total amount of sulphur shipped in 1918 was 1,266,709 long tons, valued at approximately \$27,868,000, as against 1,120,378 long tons, valued at nearly \$23,987,000 in 1917, and 766,835 tons of a value of \$12,247,000 in 1916.

Imports of sulphur diminished steadily over the period 1914-18. In the former year a total of 26,135 long tons valued at \$477,937 was brought into the country, but by 1917 imports of this article had diminished to 1015 long tons, of a value of \$29,340, and in 1918 only 82 long tons, valued at \$9542 came in. However this decrease in imports in five years of 26,053 long tons was more than offset by a growth in domestic production during the same period of 935,835 long tons. Some of the forms in which sulphur is imported are: Crude sulphur (the principal one) flowers of sulphur, sulphur lac, and refined sulphur.

Exports in 1918 were greater than in 1916 but less than in 1917. A total of 131,092 long tons were exported in 1918, valued at \$3,626,638, 152,833 long tons valued at \$3,504,661 in 1917, and 128,755 long tons, valued at \$2,505,857 in 1916.

SULZER, CHARLES AUGUST. Former delegate to Congress from Alaska, died in Alaska in April. He was born at Roselle, N. J., Feb. 24, 1879, and studied at the United States Military Academy 1899-1901. He served with the New Jersey Volunteers during the Spanish-American War. Afterwards (1907) he went to Alaska where he engaged in mining and in business and where he was chosen a member of the Territorial senate in 1914. He was elected delegate to the Federal government for the term 1917-19.

SUMATRA. In 1919 there was a remarkable recovery in the export trade of the east coast on account of the improvement in shipping conditions. Trade, however, did not return to the normal conditions of the period before the war. The balance of trade at that time was in

favor of Sumatra, especially on account of the exports of tobacco, rubber, etc. The island like other parts of the world suffered from the high cost of living, including greatly increased prices of staple articles such as rice. During the war the products of the east coast were shipped directly to the consuming markets, instead of by way of the Netherlands. In 1914 the chief leading European products among exports were coffee, tea, tobacco, and rubber. In all of these there was a marked increase in 1918. The total area planted in rubber on June 30, 1919, was about 340,000 acres, an increase of 30,000 acres in the course of six months. The exports of tobacco also increased and returned nearly to the normal point. Oil production decreased.

SUN. See **ASTRONOMY**.

SUNDAY SCHOOL UNION, AMERICAN. Founded in 1817, this is a volunteer association of members of different denominations whose purpose is to teach Christian truths, especially to the young. Missionary work is carried on throughout the United States in organizing Sunday schools, and distributing religious books and magazines. During the fiscal year ending March 1, 1919, the Union organized 862 schools, with 2989 teachers and 29,386 pupils; reorganized 700 schools, with 2368 teachers and 22,574 pupils; aided 2440 schools, with 13,900 teachers, and 170,125 pupils; visited 171,973 families; brought 6906 pupils into existing schools, with 4364 conversions; established 209 prayer meetings, 95 Young People's Societies; opened 152 preaching stations; organized 19 churches; built 13 churches; sold books and periodicals valued at \$18,629.42; and gave books and periodicals valued at \$3019.47. The combined circulation of the society's 11 periodicals was 2,020,137—a loss of 63,842 over the corresponding circulation for the preceding year. Seven new books were published during the year of which 22,000 copies were printed. Among these were Volumes 4, 5, 6, and 7 of the series entitled *Through the Bible Day by Day*, by Rev. F. B. Meyer, which makes it complete. Of the new editions of older books, leaflets, maps, wall charts, hymn books, and other Sunday school requisites 282,150 were made, making, with the new books of the year, a total production of 304,150. Besides this 950,037 publications were furnished to chaplains for use with the American forces here and abroad. To theological students 1365 volumes were distributed as aids in their study. This branch was somewhat restricted by lack of funds. A committee on War Service, did much valuable work during the year, 378 chaplains having received 658 shipments of literature to aid them in their work, besides 7575 wall charts and cards. In this work the society coöperated with the Y. M. C. A. Marked progress was reported by the missionaries among the mining camps, who said that the number of miners was greater and that in general they seemed more receptive to Bible teaching. Work among the negroes in the South was very encouraging. The negroes are being taught to respect the law, and to spend their time in useful pursuits. The amount of crime reported among these people has greatly decreased. However, about one-third of the force of missionaries was withdrawn due to the war, during the year, and not as much work was accomplished as had been hoped for. The Bible and Prayer League greatly enlarged its membership, having a total of 1755 on its roll. No dis-

trict conferences were held during the year due to the exigencies of the war. The treasurer's report showed an income of \$444,461.91, of which \$9217.72 was on hand at the time of the issuing of the report. Officers for 1919 were: President, Martin L. Finckel; secretary, William H. Hirst; treasurer, John E. Stevenson; educational adviser, George A. Barton. Headquarters at 1816 Chestnut St., Philadelphia.

SURGERY. See SHOCK.

SURINAM. See DUTCH GUIANA.

SWARTHMORE COLLEGE. A non-sectarian co-educational institution, located at Swarthmore, Pa. The enrollment for 1919-20 was 246 men and 248 women; the faculty numbers 46, eight new members being added in the year. Productive funds total \$2,251,136; the value of apparatus is \$275,429 and of grounds and buildings, \$1,615,721. The library contains 40,000 volumes, and the library is valued at \$56,914. Swarthmore was founded in 1864 by the Society of Friends. President, Joseph Swain, LL.D.

SWAZILAND. A British protectorate in South Africa, situated at the southeast corner of the Transvaal, and north of Zululand. Area, 6678 square miles; population, 1911, 99,959, of whom 98,733 were natives, 143 of other colored races, and 1083 whites. Later estimates (1914) place the population at 107,117. The chief products are corn, tobacco, millet, peanuts and vegetables. Rich mineral resources are reported, but are undeveloped with the exception of tin, of which the output in 1917-18 was valued at £60,221, and gold which had been worked before the war on a small scale. Live-stock in 1918 were as follows: Cattle, 150,000; sheep and goats, 250,000; pigs, 9000; horses, 500. Revenue and expenditures for 1917-18: £70,796, and £70,005 respectively. The protectorate is in the customs territory of the Union of South Africa. The seat of government is at Mbabane. Resident Commissioner at the beginning of 1919, D. Honey.

SWEDEN. A kingdom occupying the eastern and larger division of the Scandinavian peninsula in the extreme northwest corner of Europe; bounded on the east, south and west by the Gulf of Bothnia, the Baltic Sea, the Sound, the Kattegat and the Skager-Rak and on the west and north by Norway. Fifteen per cent of its territory lies north of the Arctic circle, but the comparative nearness of the Gulf Stream tempers the climate.

AREA AND POPULATION. The area is placed at 173,035 square miles, and the population was estimated Dec. 31, 1917, at 5,800,847. It is entirely of Scandinavian stock, with the exception of 25,290 Finns, 7138 Lapps and a few thousand others. The movement of population in 1917 was as follows: Births, 120,461; deaths, 77,157; marriages, 35,589. The immigrants in that year numbered 5811; emigrants 6440, of whom 2462 went to the United States. The chief towns, with their population at the beginning of 1919, were: Stockholm, 413,163; Göteborg, 196,994; Malmö, 112,521; Norrköping, 58,164.

EDUCATION. Public elementary instruction is free and compulsory; children not attending public schools must present evidence of private instruction. In 1917 the elementary schools numbered 16,485, with 23,014 teachers and 706,066 pupils. There were, besides, 77 public secondary schools with 25,669 pupils; 15 normal schools,

and various special and technical schools. There are two universities, one at Upsala with 2374 students in the autumn of 1917, and the other at Lund with 1405. There are also medical, philosophical and law faculties at Stockholm and Göteborg.

AGRICULTURE. The number of farms under cultivation in 1917 was 447,695. The acreage in hectares, and the produce in tons, for the principal crops in 1918 is indicated in the following table:

Crop	Acreage (hectares) 1918	Produce (tons) 1918
	1918	1918
Wheat	154,155	245,019
Rye	383,696	502,779
Barley	185,263	254,080
Oats	732,791	840,135
Mixed Corn	264,719	380,080
Leguminous crops	42,278	59,909
Potatoes	169,488	1,935,840
Roots	120,633	3,686,252
Hay	1,189,947	2,123,314

The following items in regard to Sweden's agriculture during the year were supplied by the United States Bureau of Foreign and Domestic Commerce. The total value of the 1919 harvest was estimated at 2,500,000,000 crowns. The 1918 harvest was valued at 2,330,000,000 crowns. The Central Statistical Bureau of the government has announced that the year's potato crop totaled 2,197,710 tons. Kristianstad and Malmöhus Counties were the heaviest producers, with 318,787 and 196,201 tons, respectively. The government's agricultural commission asked an appropriation of 3,460,000 crowns, to be used in 1921 for draining extensive areas, chiefly in Norrland and in Dalarna.

INDUSTRIES. The chief industry of Sweden has always been mining, and it was the largest producer of iron in Europe until the industry was revolutionized by the introduction of coal. The iron ore produced in 1917 amounted to 6,217,172 tons. Silver, lead, copper, zinc, manganese, sulphur, pyrites, and gold also are produced. The number of persons engaged in mining in 1917 was 49,455. Other important industries are lumbering and woodworking. The following notes on conditions of Swedish industry during the year were supplied by the United States Bureau of Foreign and Domestic Commerce: The prospects for the wood pulp, paper, and textile industries were reported to be improving. The glass industry also showed signs of increased activity, new orders having been received from England. With regard to the peat industry, however, conditions were much more unfavorable. This industry is of great importance because of the large increase in the domestic consumption of fuel which has taken place of late years in Sweden. The percentage of employment in the shoe industry was good, but might have been better if one of the larger factories, which stopped work some time ago on account of the too small market for its products, had not later run into difficulties and therefore been unable to resume production when conditions improved. The Swedish iron industry during both the first and second quarters of 1919 operated under very depressing conditions. Some of the most important reasons for this were the caution and hesitancy of the market on account of the uncertain industrial conditions, the valuta difficulties, overproduction in the

large countries, and finally the government sales on the British market of the stocks belonging to the state which had accumulated during the war. The export of pig iron during the second quarter of 1919 was only 23,100 tons, against 54,900 tons during the same period in 1918; and the aggregate iron export for these two corresponding periods amounted to 57,900 and 109,400 tons, respectively. At the same time the export of iron ore decreased to 635,000 tons, a decline of about 50 per cent.

COMMERCE. The leading exports and imports for 1916 were as follows:

	Kronor	Kronor
Textile manufactures . . .	88,282,114	21,993,065
Corn and flour	58,504,017	5,657,010
Colonial wares	73,426,249	10,653,270
Raw textile material and yarn	87,757,088	4,562,931
Minerals, of imports mostly coal	304,939,850	101,262,824
Metal goods, machinery, etc	103,817,465	257,087,133
Live animals and animal food	38,541,281	184,686,763
Hair, hides and other animal products	60,040,240	26,474,883
Metals, raw and partly wrought	94,654,361	170,752,234
Timber, wrought and unwrought	13,970,950	328,954,262
Wood pulp, paper and paper manufactures	9,192,068	285,248,073
Other articles	211,440,894	159,044,458
Total	1,138,566,577 (£62,745,988)	1,556,376,906 (£85,703,574)

Official figures just made public show that the import and export trade of Sweden in 1917 amounted to \$564,992,240, as compared with \$722,243,920 in 1916, a loss of \$157,251,680. The trade by countries was:

Country	1916	1917
Imports from—		
Germany	\$112,605,560	\$ 77,245,640
Great Britain	44,064,560	17,411,440
United States	57,335,920	25,760,160
Denmark	21,330,120	30,396,560
Norway	16,385,520	13,847,560
Finland	2,430,760	5,368,040
Switzerland	3,360,720	6,480,240
Netherlands	5,804,880	6,190,800
France	6,314,080	4,207,600
Russia in Europe	2,816,680	5,220,640
Austria-Hungary	1,298,160	2,532,600
Other countries	31,447,120	8,616,200
Total	\$305,134,080	\$203,307,480

The trade with the United States declined from \$77,540,440 to \$39,275,400 during the period. Very noticeable are the increased trade balances with the neutral countries—Denmark, Norway, Holland, and Switzerland.

The Swedish government has recently published an interesting series of statistics covering the exchange of products between the three Scandinavian countries during the years 1914 to 1918. The striking fact shown by the statistics was that Denmark supplied Sweden with large amounts of food products during the critical years 1917 and 1918. In 1917 Swedish imports of butter from Denmark amounted to 7142 tons, the total butter imports into Sweden for 1917 being 7150 tons. In the same year imports of cheese and pork from Denmark were 547 and 6345 tons, respectively, the total Danish production of these articles being 548 and 6624 tons, respectively. Exports from Norway to the

other two countries did not begin in earnest until the end of 1918. In 1918 Norway exported to Sweden 54,597 tons of salt herring, as well as considerable quantities of copper ore and sulphur, and 18,000 tons of saltpeter.

At the close of the year there were clear indications that the Germans were recovering the control of the Swedish market for tools. While the American machines enjoyed a better reputation than the German, and could generally be sold at a higher price, the difference in prices was so wide, on account of the cheaper German labor, that there was no market for them. At the close of the year tools were being purchased at a very low price from German sources. Toward the end of the year the new free harbor of Stockholm, which was begun Aug. 6, 1917, was opened, and by the close of the year two large new quays were in use.

SHIPPING. The merchant marine engaged in both the home and foreign trade on Jan. 1, 1919, numbered 2684 vessels with a tonnage of 1,049,456. The vessels entered from foreign countries in 1916 were 34,303 with a tonnage of 13,811,688; cleared for foreign countries 68,884 with a tonnage of 27,721,578. The number of ships and boats which passed through the canals of Sweden in 1916 was 145,194.

RAILWAYS. Late in 1919 the railway line connecting the Swedish and Finnish railway systems at Haparanda and Tornea was opened, and served to obviate the transshipment of freight by sea across the Gulf of Bothnia, which had been the prevailing practice. The interconnection of the Finnish and Swedish railway systems had been planned ever since the Swedish northern trunk line had been extended to the Tornea Valley, some time before the war. The importance of the junction of the two lines was di-

Country	1916	1917
Exports to—		
Germany	\$117,260,720	\$ 94,349,400
Great Britain	85,773,400	57,920,160
United States	20,204,520	18,515,240
Denmark	25,149,120	30,225,040
Norway	30,921,840	43,606,280
Finland	16,567,760	17,784,480
Switzerland	978,200	2,286,040
Netherlands	16,433,760	21,343,520
France	25,888,800	17,095,720
Russia in Europe	36,466,760	34,191,440
Austria-Hungary	11,684,800	13,617,080
Other countries	29,780,160	15,745,000
Total	\$417,109,840	\$361,679,400

minished by the fact that the Swedish and Finnish gauges were different, so that goods and passengers could not be forwarded from Sweden to Finland by through trains. The electrification of Swedish railways was under active discussion during the year, the Railway Council considering the electrification of the Stockholm-Gothenburg line, and arranging that the proposal be laid before the Riksdag. The grant required was estimated at about 60,000,000 kronen, not allowing for locomotives. It was planned that this amount should be spread over three years.

The Railway Council also proposed that the electrification of the Gellivara-Svartön railway, previously decided upon, should be pushed forward more rapidly.

FINANCE. Budget estimates for 1919 balanced at 621,693,800 kronor.

The following tables showing the budget esti-

mates for 1919 are taken from the *Statesman's Year Book*:

REVENUE		Kronor
State revenues		
Taxes:		
Capitation tax	850,000	
Taxes on incomes and property, etc.	199,350,000	
Succession tax	8,500,000	
Other stamp duties	32,400,000	
Tax on war profits	80,800,000	
Customs	70,000,000	
Excise on spirits, malt, sugar and tobacco	45,400,000	
Miscellaneous	9,802,640	
Net receipts from productive funds of the State		
Business of the State		
Railways		
Posts and Telegraphs	15,784,000	
Waterfall works	6,500,000	
Domains	25,500,000	
Interest shares in the Luossavaara-Kurunaavaara Co. Ltd.	1,450,000	
Interest on shares in the Swedish Tobacco Monopoly Co., Ltd.	4,500,000	
Interest on outstanding loans	4,902,500	
Fund from intoxicating liquor revenue	300,000	
Of the profit of the National Bank		
Capital assets taken into use	13,012,300	
Loans	102,642,360	
Total revenue	621,693,800	

A supplementary budget added for external expenses 381,887,900 kronor.

EXPENDITURE			
	Ordinary expenses Kronor	Extraordinary expenses Kronor	Total Kronor
Actual Expenses:			
Royal Household	1,345,000		1,345,000
Justice	7,442,940	1,440,460	8,883,400
Foreign affairs	2,322,550	232,850	2,555,400
Army	65,240,388	37,651,612	102,892,000
Navy	27,544,655	15,410,345	42,955,000

Loans to private railways	19,830,000		19,830,000
Amortization of the National debt		5,536,200	5,536,200
Fund from intoxicating liquor revenue		300,000	300,000
Total expenditure			621,693,800

GOVERNMENT. The executive power is in the hands of the king who acts with the advice of the council of state; legislative power is vested in a Diet of two chambers, both elected by the people. The lower House was distributed among

political groups at the last election preceding 1919, namely in 1917, as follows: Conservatives, 71; Socialists, 97; Liberals, 62. The ministry in 1919 comprised as its principal members the following: Prime minister, Nils Eden; Foreign Affairs, J. Heliner; Navy, Baron E. K. Palmstierna; War, E. A. Nilson; Finance, F. W. Thorsson; Agriculture, Alfred Peterson.

HISTORY

Sweden did not escape the disturbances prevalent throughout the world after the war, and in the first part of the year was endangered by Bolshevism which threatened to spread throughout the country, and by unrest of the working classes. In respect to foreign affairs the question of the Aland Islands continued to occupy the politicians. On May 26th the Swedish government requested of the Peace Conference that the question whether the islands should be assigned to Sweden or to Finland be left to the decision of the islanders themselves in a plebiscite. At this time an important measure was passed by the Swedish parliament, marking a climax of the years of effort to secure woman suffrage. Parliament bestowed full suffrage upon women on May 26th. Women already enjoyed municipal suffrage, which had been extended to them in 1909. A congress of Independent Socialists at Stockholm in June voted by 186 to 22, to take part in the Third International at Moscow and declared in favor of Bolshevik principles. In May the Diet passed a measure for a temporary excise duty on spirits which was expected to yield 20,000,000 crowns. This was a reverse to the element that favored total prohibition, for it involved an increase in the ration of alcohol. Before the war, control was established in Sweden by the "Bratt system," which entitled every one to whom a card was issued to a quantity amounting to 12 litres a quarter. During the war this quantity was reduced to two litres a quarter. The effect of this arrangement was reported to be an extraordinary increase of drunkenness, as the result of illicit consumption and illicit distilling; and it was said that both popular and scientific opinion were agreed that there should be set free a reasonable quantity of good spirits for sale. The passing of the above measure would, it was thought, lead to a return to the former more liberal ration. See EXPOSITIONS; SPIRITS AND LOCKOUTS.

SWEDENBORGIANS. See NEW JERUSALEM, CHURCH OF.

SWEDISH LITERATURE. See SCANDINAVIAN LITERATURE.

SWIFT, Rear-Admiral WILLIAM. United States navy, died at Newport, R. I., June 30. He was born at Windham, Conn., March 17, 1848, and graduated at the United States Naval Academy in 1867. He passed through the successive grades rising to the rank of captain in 1902, and rear-admiral in 1908. His services included ordnance duty at the Washington and Boston navy yards 1897-1900, 1907-09. He was commanding officer successively of the vessels *Prairie*, *Concord*, and *Yorktown*; retired in 1910.

SWIMMING. Swimming attained the heights in popularity during 1919. Hundreds of tournaments were held throughout the United States and never before were the number of en-

tries so large and the interest shown by the public so great. Norman Ross of the Illinois Athletic Club and Miss Ethelda Bleibtrey of Brooklyn, N. Y., were the outstanding stars of the year, both contributing new records of which a total of 13 were made, 10 by women swimmers.

The greatest achievement of the American mermaids was their defeat of Miss Fanny Durack and Miss Wylie of Australia who visited the United States. Miss Bleibtrey triumphed over the two Australians in the 440-yard national championship held at the Manhattan Beach Lagoon, New York City, and at the same time established a new record for the distance of 6 minutes 30 $\frac{1}{4}$ seconds. Miss Charlotte Boyle, also of Brooklyn, finished second in this event, Miss Durack and Miss Wylie having to be content with third and fourth places.

Miss Boyle retained several of her championship titles during the year and also set two new American records, one of these being 4 minutes 23 seconds for 300 yards, and the other 64 feet in the plunge for distance. Miss Bleibtrey, Miss Boyle, Miss Alice Lord, and Miss Leslie Bunyan established a new American relay record at 440 yards of 4 minutes 59 seconds.

Of the three new American records made by men swimmers two went to the credit of Norman Ross and one to that of Fred Schwedt of the Detroit Y M C A. Ross scored both his successes the same night in the Los Angeles, Cal., Athletic Club pool where he covered 440 yards in 5 minutes 14 $\frac{3}{4}$ seconds and 500 yards in 5 minutes 58 $\frac{1}{4}$ seconds. Schwedt set the new mark of 80 feet for the plunge for distance in the Pittsburgh A. A. natatorium. Ross also competed in the Inter-Allied championships in France and was victorious in all five competitions, his closest call coming in the long distance swim in the Seine River where he won by only a few yards from Baicalupo of Italy.

In the senior national championships, outdoors, William L. Wallen of the Illinois A C retained his titles at the half-mile and the mile while E. T. Bolden of the Great Lakes Naval Training Station won the 10-mile championship over the Riverton, N. J. course. Yale won the intercollegiate championship.

SWINE. See **LIVE STOCK.**

SWITZERLAND. A federal republic of Central Europe including within its boundaries the highest parts of the Alps as well as the Jura mountains; divided into 25 cantons and demicantons. Capital, Berne.

AREA AND POPULATION. The total area is 15,976 square miles; population at the census of Dec. 31, 1910, 3,741,971; estimated July 1, 1916, 3,937,000. The majority of the inhabitants in 19 out of the 25 divisions spoke German. The majority in five, namely Fribourg, Geneva, Neuchâtel, Valais and Vaud spoke French and the majority in one canton, namely Ticino, spoke Italian. Emigration in 1918 was only 304, as compared with 3869 in 1914. The estimated population of towns over 100,000 on Jan. 1, 1918, was as follows: Zürich, 213,900; Basel, 137,100; Geneva, 139,500; Berne, 105,000.

EDUCATION AND RELIGION. No later figures for elementary education are available than those given in the preceding Year Book. There are seven universities situated respectively at Basel, Zürich, Berne, Geneva, Fribourg, Lausanne and Neuchâtel. The largest of these is that at Zurich, which in 1917 had a total attendance of

4309. The Protestants, according to the census of Dec. 1, 1910, numbered 2,107,814, and the Roman Catholics 1,583,538.

PRODUCTION AND COMMERCE. No later figures are available for production than those given in the preceding Year Book. The country is in the main agricultural, but has important manufactures. The total grain area in 1918 was placed at 412,936 acres. The forest area of Switzerland is placed at 3290 square miles, and is mainly owned by the cantons and municipalities. Salt mining is an important industry, the output in 1917 being 763,306 quintals. The following information in regard to the trade of Switzerland was supplied by the United States Bureau of Foreign and Domestic Commerce:

In 1913 the principal exports to the United States were manufactured goods and food products, with a small percentage of raw materials. During 1917 and 1918 manufactured goods continued to be the principal export to the United States, while the shipment of food products decreased very markedly. From the beginning of the war the value of imports from the United States rapidly increased, reaching the maximum in 1916 of 565,000,000 francs (\$109,045,000) from what may be considered a normal level, that of 1913, of 118,000,000 francs (\$22,774,000).

While wheat and other cereals were the principal factors in this increase of imports, a good share of the advance was due to the high price of the cotton imported, and also to the importation of an unusual quantity of chemicals and manufactured articles. Imports from the United States to Switzerland were artificially curtailed in 1918 because of the shipping situation and through the application of a number of restrictive war measures. The serious effect of the shipping situation and the restrictive war measures on Swiss imports from the United States can be most clearly noted in the matter of wheat imports. Before the war Switzerland raised about one-eighth of the wheat necessary to cover the needs of the country, and in 1913 imported 529,200 metric tons of wheat, more than one-third of which came from Russia. The Swiss imports of wheat in 1917 amounted to 261,700 metric tons, 249,700 tons of which came from the United States, and in 1918 to only 57,700 metric tons, of which the United States supplied 57,100 metric tons, the remainder coming from Argentina and Canada. As the wheat production of Switzerland had, during the years of the war, only increased sufficiently to supply one-fifth of the country's needs, the result of this curtailment of imports was a shortage which would have been avoided at any price, had it been a question of price.

Between the date of the signing of the armistice and the last quarter of 1919, Swiss-American trade has gradually become more normal. Foodstuffs and raw materials, the exportation of which had been subject to so many natural and artificial restrictions in 1918 have been coming forward in increased quantities, particularly after the first quarter of the year. The rate of exchange between Switzerland and the United States shifted from 4.82 francs per dollar Dec. 31, 1918, and 4.95 francs per dollar Apr. 30, 1919, to approximately par (5.182 = 1 dollar) at the end of June, 1919, and from that point to an average of 5.62 francs in the selling rate for dollars during the quarter July-September, 1919. This exchange situation down to October,

1919, was practically unchanged, and the premium of more or less 8 per cent on the dollar has greatly stimulated exportation to the United States, particularly of embroideries, watches, silks, artificial silks, etc., while the low level of foreign exchanges in relation to the Swiss franc makes purchasing of such goods as are obtainable in markets other than those of the United States specially advantageous to the Swiss importer.

The following recent quotation of the value of foreign money in Swiss exchange is indicative of the position maintained by the franc during the past few months, viz.:

Oct 20, 1919	Buying rate	Selling rate	Par value
New York	560 00	564.50	518 2800
Paris	65 00	65 35	100 0000
London	23.48	23.50	25 2215
Italy	55.00	55 25	100 0000
Germany	19 80	20 10	123 4570
Austria	4 90	5 20	105 0100
Holland	213 50	214 50	208 3193
Sweden	136 00	137 00	138 8900
Spain	107 00	108 00	100 0000

For the years prior to 1913 the balance of trade between Switzerland and the United States averaged somewhat over \$10,000,000 in favor of Switzerland. The balance of trade in favor of Switzerland in 1913 amounted to 18,534,000 francs (\$3,579,062) and in 1914 to 14,115,000 francs (\$2,724,195). For the four succeeding years the balance of trade was in favor of the United States to the following amounts: 1915, 217,273,000 francs (\$41,933,689); 1916, 432,129,000 francs (\$83,400,897); 1917, 339,012,000 francs (\$65,429,316); and 1918, 254,456,000 francs (\$49,110,018).

In relation to Swiss foreign trade in general, the United States prior to the war held fourth place as a purchaser of Swiss exports, and fifth place as a source of supply for Swiss imports, as is illustrated in the following table of percentages:

Country	1900 Per- centage	1910 Per- centage	1913 Per- centage	1917 Per- centage
Exports to--				
Germany ..	24 11	22 59	22 21	30 07
Great Britain...	20.99	16 75	17 16	15 56

United States...	5 14	3 94	6 14	19 08

Germany under normal conditions has always been the principal customer and the chief source of supply for Switzerland. The present low valuation of the mark in Swiss exchange has given rise to certain commercial inquietude, particularly among Swiss manufacturers, and it is feared by these manufacturers that with the mark so far below par the German manufacturers will be able to flood the Swiss market with manufactured goods at prices equivalent to or below the cost of production to the Swiss manufacturer. On the other hand, the population in general, and all organizations interested in seeing the high cost of living in Switzerland

modified, are interested in having any new source of supply which will furnish them with goods at a reduced price, provided, however, that the influx of foreign goods does not produce industrial stagnation in Switzerland and deprive a large proportion of the population of employment. In 1910, 42.74 per cent of the population of Switzerland was occupied in industrial pursuits, and, as that proportion is perhaps now over 50 per cent, industrial stagnation would be a very serious matter for the country and might lead to very radical political developments. There are also a number of people and organizations which insist that the government adjust this matter of exchange, without apparently taking into consideration that it is not within the power of the Swiss government to revalidate the mark.

There appears to be real economic danger for Switzerland in this situation, and it is possible that some steps to avoid it will be taken in the near future, though in what manner is not yet known.

Germany has been Switzerland's main source of supply for coal, iron, and steel, all of which are now being purchased from the United States. If there is any restriction placed by Switzerland on the importation of goods from Germany, it will undoubtedly not affect these articles; but, as under the terms of the Peace Treaty Germany will be deprived of much of its surplus of these products, those imports should be drawn largely from the United States for some years to come. The principal competitor of the United States in the supplying of coal, metals, and also cotton to Switzerland will be Great Britain, which geographically has a somewhat better position for handling Swiss trade than the United States, although not having available as native production so great a quantity of any of those commodities.

To assist British trade in general with Switzerland a branch of the Lloyd's Bank has recently been established in Zürich. British exports to Switzerland are at present also facilitated by the depreciation of the pound sterling. During the past six months British wares of every description, which had been short stocked in Switzerland throughout the war, have appeared in the Swiss market.

American goods are handicapped in this international competition by two temporary and one permanent factor. The first temporary factor is the premium on the dollar, approximating 8 per cent, which means a serious increase in price to the Swiss importer on either raw materials or manufactured goods which have to meet the competition of goods originating in other markets. The second temporary factor is the rapid and numerous changes in market price of goods in the United States.

A number of instances have been cited where it had been impossible to receive and accept quotations before a new advance in price had been made and a new quotation forwarded for acceptance. The permanent factor mentioned is the geographical position of the United States in relation to Switzerland, which entails greater delay in receiving goods and heavier freight rates than would be chargeable on commodities coming from adjacent or neighboring countries. To offset this permanent factor the United States will need good commercial organization, the best of banking facilities, and available space on

steamers for material and goods consigned to Switzerland.

It does not appear to be possible to forecast what types or kinds of American manufactured products could be marketed in Switzerland. In general, it can be said that a market exists for practically all American manufactured products which can be competitively sold in the British Isles or any European country, with the exception of mining machinery and parts, machinery, gear, etc., for ocean-going ships. The competition to be met will be substantially the same as that which will be met in the countries mentioned, and the Swiss import tariff is not a commercial barrier against imports.

The principal articles of import are the following, which are listed in the order of their importance in 1913: Wheat, coal, raw silk, orege silk, etc., precious metals and specie, raw cotton, cereals other than wheat, iron and steel, wine, machinery, sugar, leather, worsted goods, cotton goods, copper, raw wool, cocoa, cotton yarn, coffee, tobacco, petroleum, oils, and rice.

The principal articles of export in the same year were: Embroideries, watches, silk goods, machinery, chocolate, condensed milk, silk ribbons, cotton goods, chappe (silk), aniline colors, straw goods, aluminum, cattle, wrought iron, calcium, and timber.

The principal cities of Switzerland, with their population according to the 1910 census, are:

City	Population	City	Population
Zurich	190,733	Winterthur	46,384
Basle	132,276	Lucerne	39,339
Geneva	132,153	La Chaux-de-Fonds	37,751
Berne	85,651	Neuchatel	23,741
St. Gall	75,482	Bienne	23,679
Lausanne	64,446	Fribourg	20,293

The chief industrial centres of Switzerland are:

Arbon.—Textile machinery, motor cars.

Baden.—Machinery (electrical).

Basle.—Chemical industry, machinery, and silk ribbons

Berne and Bienne.—Watchmaking, dairying, cheese

Cham.—Condensed milk.

Geneva.—Jewelry, watchmaking, motor cars

Chaux-de-Fonds.—Watchmaking, chocolate, and motor cars.

Veuchatel.—Watchmaking, chocolate, and motor cars.

Lausanne.—Chocolate.

Vercy.—Chocolate

St. Gall.—Embroidery.

Solcure.—Shoes, leather.

Winterthur.—Machinery.

Zurich.—Machinery, silk weaving and bleaching, straw goods.

FINANCE. The following table showing the budget estimates for 1919 was taken from the *Statesman's Year Book*:

Source of Revenue	Francs
Capital invested	16,833,020
General Administration	129,900
Departments—	
Political	47,500
Interior	48,000
Justice and Police	1,222,500
Military	1,266,671
Finance and Customs	69,014,081
Commerce, Industry and Agriculture	6,328,400
Posts and Railways	129,051,510
Miscellaneous	3,858,418
Total	227,800,000

Branch of Expenditure	Francs
Debt, Total Charge	66,645,171
General Administration	2,148,363
Departments—	
Political	1,834,375
Interior	15,076,407
Justice and Police	2,792,190
Military	59,504,245
Finance and Customs	16,150,780
Commerce, Industry and Agriculture	22,361,599
Posts and Railways	139,231,893
Miscellaneous	59,977
Total	320,800,000

GOVERNMENT. The executive power is vested in a president and a vice-president, who are elected by the Federal Assembly, but are not eligible for reelection until after the expiration of a year; and in a Federal Council which consists of seven members elected for three years by the Federal Assembly. The legislative power is in the Federal Assembly consisting of two chambers, namely the State Council and National Council. The former has 44 members chosen by the cantons; the latter 189 representatives chosen by direct election. President for 1919, Gustav Ador. For changes see *History* below

RAILWAYS Swiss railway electrification made some progress in 1919, and at the end of the year the Davos and the Filisur line was ready for passenger traffic. It was hoped to have finished the electrification of the line between Davos and Klosters sometime in 1920, and in 1921 the sections between Klosters and Landquart and between Reichenau and Disentis.

Increased freight and passenger rates were required in Switzerland, as elsewhere in Europe, and in the first six months of this year the Swiss State Railways brought in 35½ million francs from the increased tariffs. The average price of coal in 1918 was fcs. 153 (\$30) per ton as against fcs. 27 (\$5.40) before the war. For the year 1920 the expenditure upon maintenance and electrification was estimated at 125,000,000 francs. The eight-hour working day increased the expenditure by several million francs, and it was considered doubtful whether the goods traffic would reach pre-war figures. The estimates for 1920 were as follows: Receipts, 328,000,000 francs; expenditure, 288,000,000 francs. The net receipts therefor were expected to be 40,000,000 francs, which would not suffice to pay interest on debentures, and it was difficult to see how this deficit will be covered.

In addition to general schemes for electrification the scarcity of coal led to the introduction of battery-driven cars for switching at stations of medium size, and for the transport of freight. These cars exerted a tractive effort of 1000 kg. at the wheel rims at a speed of 12 km. per hour, corresponding to 44 horse power.

HISTORY

The economic condition of Switzerland was reported in January to be worse than it had been during the war.

THE NEW PRESIDENT. In December M. Motta was elected president to succeed M. Ador, who had been chosen in the preceding elections, as noted in the 1918 YEAR BOOK. M. Motta had already held the office of president in 1915. Like M. Ador he had shown sympathy for the Allies, especially for Belgium after the violation of her neutrality, when he officially expressed his sympathies to the Belgian Minister.

He was a strong partisan of the League of Nations. As Federal Councilor he was the first to affirm publicly that Switzerland must enter the League, and in the Federal Council he represented the Catholic party and the Canton of Tessin.

ATTITUDE TOWARD PEACE. Switzerland favored the League of Nations on condition that she should maintain her neutrality. She could not bind herself to take part in military action under a League of Nations, but economic coercion was not excluded.

PEACE CONFERENCE. The International Council of Peace was held at Berne at the beginning of September and gave its attention among other things to the attitude of the German pacifists during the war, and to the responsibility for the war. It expressed its approval of the resolutions passed by the National German Congress, placing the sole responsibility of the war in 1914 upon the German and Austrian governments. It paid a tribute to the German and Austrian pacifists who had been pursued by their governments on account of their policy, and it declared that they should endeavor to bring their fellow countrymen to a consciousness of the legitimate grievances against their governments in regard to the conduct of the war and the violation of the laws of nations. A resolution was passed which declared that the conscience of humanity reproved all attempts on the lives, independence, well-being, and progress of the people in the course of the war; branded as shameful the executions, torpedoings, the deportation of civil populations, the wilful and systematic destruction of private houses, cities and villages, mines, shops, fruit trees, and in short the entire policy of destroying the future wealth of whole regions; demanded that the authors of these crimes be sought out and condemned with impartial justice by an unbiased international court, and expressed the hope that this would be the work of the founders of the League of Nations. It concluded with an expression of approval of the decision taken by the German National Assembly to appoint a commission of inquiry into the responsibilities for the war and for the atrocities committed during its course. It decided to call in the following spring a general meeting of representatives from peace societies in the entire world.

ELECTIONS. The elections to the National Council in the fall gave the Socialists 40 seats out of the 189, a substantial gain, but far below their predictions. The extremists among them, as represented by three candidates characterized as "communists," were defeated. The radicals lost heavily. Another feature of the elections was the accession to power of an agrarian group. In the elections held at the same time to fill vacancies in the Council of State the Socialist candidates were defeated.

SYKES, SIR MARK. British traveler and writer, died in Paris on February 16th. He was born in England in 1879, studied in Belgium and at Cambridge, and then made long journeys in the near East. He was employed in the British embassy in Constantinople from 1905 to 1907, and collected material for a number of books including the *Thorough Five Turkish Provinces*, and *The Califf's Last Heritage*. It was said that in his travels he had covered 14,000 miles and that he had made road maps of 5000 miles hitherto unmapped in Asiatic Turkey. In 1911

he was returned to Parliament as a Unionist, and he was reelected by a large majority at the last election of 1918. At the outbreak of the war he raised a battalion in Yorkshire. He was remarkable for his versatility and gift for languages.

SYLVA, ELOI. A celebrated Belgian tenor, died in Berlin, in September. He was born at Geergradsbergen, Belgium, Nov. 29, 1847. After his debut at Nantes he was for seven years a member of the Opéra in Paris, and from 1889-1902 he sang at the Royal Opera in Berlin. He made successful tours of Germany, Russia, France, Belgium, and England. During 1886-87 he sang at the Metropolitan Opera House. His voice was of unusual power, and he was a superb actor.

SYRACUSE UNIVERSITY. A non-sectarian co-educational institution founded in 1870 at Syracuse, N. Y. It is conducted under the auspices of the Methodist Episcopal Church. The enrollment for the sessions of 1919-20 was approximately 4800. In 1918 the faculty numbered 336; in 1919 it was 368. The library contains 103,222 volumes. In 1919 a new School of Business Administration was opened. President, James Roscoe Day, D.C.L., LL.D., L.H.D.

SYRIA. That part of Asiatic Turkey lying between the Euphrates River and the Syrian desert on the east and the Mediterranean Sea on the west, and between the Alma Dagh Mountains on the north and Egypt on the south. In general conformation it is a tableland divided into two long, comparatively narrow strips by the Jordan valley and its continuation northward to the sea at Antioch, and southward to the Red Sea. The western strip is traversed from north to south by a mountain system that rises to 10,050 feet in the Lebanon district. The eastern strip is sandy and bare, merging into the Syrian desert. The area is given as about 114,530 square miles, and the population before the war as about 3,500,000. The population, decimated by massacres and starvation incident to the war, is now supposed to be considerably less, but no precise figures are yet obtainable.

Under a Franco-British arrangement made in 1916, Asiatic Turkey was divided into two zones, the one that included Syria to be regulated and controlled by France. The working out of this arrangement, as influenced and modified by the Peace Conference, was in progress throughout 1919, as indicated below.

THE QUESTION OF CONTROL. The French press abounded in accusations and insinuations during the year in regard to the policy of England in Syria. The British diplomats were accused of stealing a march on the French and of making arrangements in the British interest, contrary to the just claims of France. This was based on rumor largely, and there seemed to be no specific authorities for the charges. Toward the end of September an arrangement was reported between Lloyd George and Clemenceau for a provisional solution. According to reports in the press, England was to recall her troops from Syria, beginning November 1st, and French troops were to replace them in the zone that had been assigned to France by the Anglo-French treaty of May, 1916, namely in the Libanus and in Cilicia and at Beirut, Alexandria, and Diarbekr, but Mosul was to keep its British garrison. The treaty of 1916 provided for an indirect French administration; that is

to say, it was understood that in the cities and territories of Damascus, Aleppo, Homs, and Hama, the French troops were not to replace the English. The English declared that according to the treaty which they had signed at Mecca, Oct. 25, 1915, in order to secure Arab support against the Turks, an independent Arab kingdom was established in the above-mentioned cities, as well as in Mesopotamia as far as Bagdad. According to the French view it was inconsistent of the English to keep Upper Mesopotamia as they had done, without any consideration for this new Arab state, and at the same time require the French to respect the Arab claims in the interior of Syria. Moreover, the treaty of October, 1915, was not known until February, 1919, and the French therefore were not bound by it. On the other hand, the English declared that on Nov. 23, 1915, the French representative had been informed of the new communications with the Arab chief. To this the French replied that while their representative had been informed of communications, he had not been informed as to the nature of them. He did not know anything about the agreement with the Arab chief, and he had even in the course of the conversation rejected the idea of an independent Arab state. The English press, while recognizing the rights of France, emphasized constantly the rights of the populations concerned, and especially of the Arabs. To this the French replied that they were not novices in the matter of treating Orientals; that inasmuch as they had founded and maintained a great empire on the other side of the Mediterranean, and during the four years of war had had no troubles with the natives in North Africa, in contrast to the difficulties which had developed in British possessions, the English might be fully reassured in the matter. They said it was first necessary to come to a frank agreement on the Syrian question, and after that to leave the French to settle with the Arabs who represented only a single element in the population. It was said that the French were not going into Syria for the purpose of oppressing the natives, and it was pointed out that in Algeria the reforms recently introduced by M. Jonnart were sufficient proof of French liberalism. They said that the English were about to establish a protectorate over the whole of Mesopotamia, over Arabia, and perhaps over Palestine, and that they had just assured themselves of a semi-protectorate in Persia; thus, that the British sway was extending over a wide, new domain. Now the French did not object to this, but were, on the contrary, convinced that the English, with their excellent qualities as colonizers, would rise to the task, and in France there was no concern whatever in regard to the wishes or the claims of the inhabitants of Mesopotamia, Arabia, or Persia. Therefore, why should not England have the same confidence in the French as regards the populations of Syria? Two great countries, France and England, united during the four years of war, and joined by the strongest possible ties of friendship, ought to be able to discuss openly and loyally differences between them.

The French high commissioner, General Gouraud, landed at Beirut, November 21st. Rumors without foundation were circulated to the effect that he intended to conquer the country. These were followed by various rumors of French de-

feats, of French injustice to the Moslems, etc. The French had agreed not to proceed into the interior, or to lay hands on the cities of Damascus, Aleppo, Homs, and Hama. The purpose of the expedition was to relieve the British in Cilicia and in all that part of Syria known as the "blue zone." This was accomplished by the end of the year. It was also, in the second place, to aid the natives of the occupied region in the establishment of a regular and effective administration.

FRENCH RAILWAYS IN SYRIA. The object of French companies in obtaining concessions for railways in Syria was to connect the interior with the important ports. Thus Tripoli, Beirut, and Jaffa became the natural outlets for products of the country, at the same time that the Aleppo - Hama - Homs - Baalbek - Ryak - Damascus-Mzerib line, forming, so to say, the backbone of that region, gave it the consciousness of its moral unity.

Damascus has Beirut as an outlet. This line is a masterpiece of construction. It traverses the Lebanon range at an altitude of 1487 meters (4878 feet), descends to 900 meters (2953 feet) in the Bekaa, then crosses the Anti-Lebanon mountains at 1405 meters (4609 feet), to descend again to 699 meters (2293 feet) at Damascus. It has four tunnels, 13 bridges, and 39 kilometers (24 miles) of rack and pinion track. Its only defect is that it is of a narrow gauge from Ryak to Beirut. The building of a standard-gauge line would have required an outlay out of all proportion to traffic.

The line was constructed without a guaranty of the Turkish government, and opened for operation in 1895. In 1913 it attained receipts of 18,000 francs per kilometer. In the beginning the receipts were insignificant, for it was not a question of capturing an existing traffic, but to create it.

The Homs-Tripoli line, intended to serve Homs, Hama, and Aleppo, produced before the war 16,900 francs of receipts per kilometer. This line was demolished by the Germans, who used its material for the construction of the Ras-el-Ain Diarbekr branch of the Bagdad railway.

The Jaffa-Lyda branch of the French railway from Jaffa to Jerusalem, which connected the centre of Judea with the coast and had been opened in 1892, was likewise destroyed. The first result of German occupation was to cut off the interior of Syria from two of its ports, Tripoli and Jaffa, and to attach it more closely to the centre of the Turkish State by the Constantinople, Aleppo, Damascus, Afouleh, Tul-Karem, Lydda, Bersheba line.

The French enterprises in Syria include also the network of Lebanese tramways, serving the suburbs of Beirut within a radius of 20 kilometers (12.5 miles). These lines are to be extended toward the other ports. A line running along the coast would complete the system of Syrian railways.

The Franco-Syrian network of railways includes the following lines: Aleppo-Ryak, 331 kilometers (205 miles); Beyrouth-Damascus-Mzerib, 249 kilometers (155 miles); Homs-Tripoli, 102 kilometers (63 miles); Jaffa-Jerusalem, 87 kilometers (54 miles); Lebanon tramways, 21 kilometers (13 miles); making a total of 790 kilometers (490 miles).

Whereas the German and Turkish railways had a tendency to draw Syrian activity toward Con-

stantinople, the French lines strive to conserve the fruits of Syrian traffic to the country and contribute in a great measure to give to it the consciousness of unity and independence.

TAHITI. See FRENCH ESTABLISHMENTS IN OCEANIA.

TAILHADE, LAURENT. A French poet and radical agitator, died in France November 3d. He was born at Tarbes, in 1854, and attracted attention during his youth by his anarchistic speeches. To him was attributed the remark in the Chamber of Deputies in 1893, "What matter the victims if the act is beautiful?" In the following year he was one in an anarchist riot in Paris, and in 1901 was condemned for a year in prison for an article in which he had urged the assassination of the Czar, and the President and ministers of the French Republic. He added greatly to his notoriety by figuring in two duels in 1909. As to his literary career, he began as a journalist and in his early writings showed the literary influence of the Parnassians. The best known of his writings are ballads and satirical verse. Among his works are the following: *Le jardin des rêves* (1880); *Au pays du mufle* (1891); *À travers les grouins* (1899); *Poèmes aristophanesques* (1904); *Poèmes élogiques* (1907); *Un monde qui finit* (1909); *La forêt* (1910); *Pages choisies* (1912).

TAIWAN. The official name of Formosa, used by both Japanese and Chinese. See FORMOSA.

TARASOVA, NINA. See MUSIC, Artists, Vocalists.

TARDIEU, ANDRÉ. French representative at the Paris Peace Conference. He was well known in the United States as French High Commissioner during the war. He studied at the Ecole Normale, graduated at the head of his class; first entered diplomacy, but later devoted himself to journalism, and became foreign editor of the *Temps*. In the general election just before the war he entered upon a political career, and in August, 1914, he was appointed chief censor, which office he soon left in order to enter the active service in the field. After an attack of pneumonia which incapacitated him for service at the front, he was appointed to his mission in the United States, where he performed his duties with great efficiency and tact, and won the good will of all. He returned to France after the formation of the Clemenceau ministry and he remained in Paris and served as commissioner for matters pertaining to the relations between France and the United States, with the exception of a short interval passed in the United States. On November 7th upon the resignation of Lebrun, Minister of Blockade and of the Invaded Regions Captain Tardieu was appointed to this post. This promotion was of great importance in view of the political situation in France, for it indicated that M. Clemenceau might support his nomination as successor to the prime ministership.

TARIFF. The year 1919 saw no vital issue made of the tariff question among the leading nations of the world, largely because commerce at home absorbed the interests and activities of those concerned almost exclusively. The provision of the Peace Treaty which compels Germany to consider the allied countries on the most-favored nation basis for at least five years promises to replace France and Belgium as competitors in the world markets. It seemed quite pos-

sible that by making special commercial arrangements with neutral or other countries, the invaded allied countries would be unable to repair their destroyed industries for a disastrously long period. The treaty provisions would tend to give them an opportunity for development and repair without making similar obligations in return. In the United States there have been no important revisions of the customs duties as yet. The Tariff Commission whose activities are outlined below, has continued its extensive investigations into various branches of industries affected by the war or by foreign commerce, and is preparing a programme which will be very valuable for any tariff legislation which may be inaugurated in the future.

TARIFF COMMISSION. According to the Revenue Act of Sept. 8, 1916, this commission was created as a permanent organization, to be composed of six commissioners serving for a term of 12 years. The duties of the commission are to investigate all matters relating to the administration and the industrial and fiscal effects of customs laws throughout the world; to investigate tariff problems between this country and abroad; and to place all information at the command of the President and Congress. Unfortunately the entire personnel of the commission were compelled by circumstances to devote much of their time to special war services during the last year. Chairman Taussig severed his connections with the War Industries Board only to be called by the President to Paris as an expert adviser. This made it necessary for him to resign as chairman of the tariff commission and left a vacancy which had not been filled up to the time when the annual report of the commission was issued, Nov. 29, 1919. The other commissioners are Thomas W. Page, vice-chairman; David J. Lewis, William Kent, William S. Culbertson, and Edward P. Costigan. Its secretary is John F. Bethune, its office is at 1322 New York Avenue, Washington, D. C. The commission was also greatly handicapped by the fact that its appropriation was reduced by Congress from \$300,000 to \$200,000. It was necessary for the commission to give up many lines of work which it had planned to prosecute with vigor, and to dispense with the services of a large number of experienced men and women. A greater part of the work that was completed has not been published because of the lack of money to pay for the printing.

The cessation of war activities made it opportune to again bring up to Congress a number of recommendations based largely on investigations made in past years. The Tariff Commission urged in response to a request from the Ways and Means Committee for suggestions of possible revenue legislation, that independently and in advance of other tariff and revenue enactments, especially prior to tariff and internal revenue increases, statutory provision be made whereby duties and taxes shall attach to merchandise previous to the date of the final passage of tariff and internal revenue law. By disregarding this source of revenue which European countries have not neglected the United States has lost a very considerable possible income at every tariff or internal revenue change. Another recommendation made by the commission is in regard to customs administration laws. Many of the present laws on this subject are not only highly antiquated, but also contain much

surplusage, frequent obscurity, and provisions so severe in their practical operation that they have long and continuously led to just complaints that the government is placing unreasonable burdens on commerce. The Tariff Commission has also made a complete and exhaustive report on the subject of free or foreign-trade zones in ports of entry. As a result of this investigation the commission recommended the adoption of permissive legislation for the establishment of foreign-trade zones. The building up and maintenance of an American merchant marine and the facilitating of our foreign commerce justify and demand the elimination of unnecessary hindrances and delays incident to the present system of bonded warehouses and drawback, and the adoption of the foreign-trade zone is an alternative and supplementary device. In response to an official request of the Ways and Means Committee, the commission submitted on Oct. 4, 1919, the results of its investigations on "Dumping and other unfair foreign competition in the United States." The report makes clear that dumping is generally regarded as occurring whenever there is a sale of imported merchandise at less than its prevailing or wholesale price in the country of production. It suggests that some official body, moving along lines sanctioned by Congress in the Federal Trade Commission Act, may be specifically instructed to deal with dumping as a manifestation of unfair foreign competitive methods. In February, 1919, the commission submitted to Congress a comprehensive report on reciprocity and commercial treaties. The report is prefaced by recommendations with regard to the use of tariffs as a means of preventing discriminations to the disadvantage of American citizens and their products in foreign markets. The recommendations emphasize the principle that "the United States should ask no special favors and should grant no special favors" and that "it should exercise its powers and should impose its penalties not for the purpose of securing discriminations in its favor but to prevent discriminations to its disadvantage." The commission recommends the enactment of legislation authorizing the imposition of additional or penalty duties by proclamation of the President on imports from countries not according to the United States the same treatment accorded to other most-favored nations.

During the past few years various reports were in process of preparation on foreign tariffs and commercial treaties. In the discussion rising out of the peace conference and during the war, urgent demands were made upon the commission for this type of information, and in many cases the commission cooperated actively with other branches of the government in providing pertinent and reliable data on commercial treaties and colonial tariffs. Substantial progress has been made toward the preparation of this material for final publication. The subjects thus dealt with include a report on "Colonial Tariff Policies." The first part will review preferential tariffs in Great Britain and the British self-governing dominions, while part two will include a survey of the colonial tariff policies of France, Germany, Italy, Spain, Portugal, the Netherlands, Belgium, Great Britain (Crown colonies), Japan, and the United States. This report will be prefaced by a summary presenting the value of colonial trade, the effect of tariffs, the exist-

ing open-door treaties, and tariff policies and tendencies in the British Empire and dependent colonies. The commission has in course of preparation a digest of the commercial treaties of the world. It will contain a digest not only of the commercial treaties of the United States with other countries but also of commercial treaties, conventions, and tariff agreements between all nations which were in force at the outbreak of the war in 1914, and of others which have been concluded since that date. A report upon the proposed reciprocity agreement of 1911 between the United States and Canada, which is also being prepared at the request of the Committee of Ways and Means, will contain an historical account of the negotiation of the agreement, a detailed analysis of the measure, and a comparison of the rates proposed in 1911 with the then existing tariffs of the two countries and with the tariffs at present in force.

The Tariff Information Catalogue consists of a complete collection and thorough classification of all possible information regarding each article covered in the revenue act of 1913. In addition to a general discussion of each article, its uses, the methods and processes of its manufacture, and the differences of American and foreign methods, the catalogue gives the nature and source of supply, domestic and foreign productions, regulations, costs of manufacturing here and abroad, and other related data. Reports on the following subjects have been completed during the year 1919: Census of dyes and other coal-tar chemicals; Pyrites and the sulphur industry; The potash industry; The domestic potato product industry; Acids and related materials; Optical glass and chemical glassware; Tungsten-bearing ores; The magnesite industry; Manganese ore; Zinc ore; Graphite; Scientific instruments; The Lumber industry; Costs of production in the sugar industry; Glucose; Industrial alcohol; Confectionery; Cotton yarn; Cotton ventians; Papers and books; The brush industry. And The wool growing industry.

TASMANIA. A state in the Commonwealth of Australia consisting of the island of Tasmania and several small islands. Area, including Macquarie, 26,215 square miles; estimated population, Jan. 1, 1917, 203,177, as compared with 191,211 at the 1911 census. Capital, Hobart. Legislative power is vested in a legislative council and a house of assembly, members of the former being elected for six years and of the latter for three years. Executive power is vested in a governor or administrator appointed by the crown. Governor at the beginning of 1919, Sir F. A. N. Newdegate; Prime Minister, W. H. Lee.

Recently published comparative figures for the mineral output of Tasmania in 1905, 1913, 1917 and 1918 are shown in the table below, from the report of the Secretary of Mines for the calendar year 1918:

<i>Minerals</i>	1905	1913	1917	1918
Gold... fine ounces	73,540	33,400	14,496	10,529
Silver-lead ore tons	75,270	83,289	9,576	7,241
Blasted copper .do	8,610	4,569	5,845	5,559
Copper ore .do	1,151	1,967	771	444
Tin ore .do	3,891	4,010	2,637	2,256
Wolfram .do	32	68	172	155
Osmiridium ounces	..	1,262	332	1,607
Zinc .do .do tons	48	3,822
Scheelite .do	69	216
Coal .do	51,993	55,013	63,412	60,163

TAWNEY, JAMES A. Former Congressman, died at Winona, Minn., June 12. He was born in Gettysburg, Pa., Jan. 3, 1855; became a machinist and worked at that trade until 1881; was admitted to the bar in 1882, and afterwards practiced at Winona. After serving in the State Senate he was a member of the United States Congress from 1893 to 1911. President Taft appointed him a member of the International Joint Commission for the settlement of disputes with Canada. He was a Republican in politics.

TAXATION. The so-called War Revenue Act of 1918 was signed by President Wilson on Feb. 21, 1919, immediately upon his return from Europe. The bill, providing for \$6,000,000,000 revenue from taxes during the year 1919, was reported to the House on February 6th, and was passed February 8th, after a six-hour discussion, by a vote of 310 to 11. The 60-dollar provision for ex-service men, and the child-labor section, were criticized but retained, the former being characterized by one member as a "mere pittance." The bill was passed in the Senate on February 13th without a record vote. Total revenue requirements for 1919 were estimated at the beginning of the year to be in the neighborhood of \$18,000,000,000; thus it was planned to raise about one-third by taxes.

Drastic measures to prevent the narcotic drug traffic became effective at once. Among taxes which became effective April 1st were those affecting railroad and steamship tickets, pipe lines, insurance, theatre admissions, and club dues, and a variety of stamp taxes. Levies against the excess of value of so-called semi-luxuries, such as articles of dress, were imposed after May 1st. The soda fountain tax became effective May 1st. (See 1918 YEAR BOOK for further details concerning the bill.)

The act authorized the appointment of an Advisory Tax Board of six members, which should hear appeals from taxpayers to revenue officials, concerning the fairness of assessments, and questions arising out of the auditing of returns. The names of five of these members were announced by Commissioner of Internal Revenue Daniel C. Roper on March 14th, as follows: Dr. T. S. Adams, Chairman, J. E. Sterret, Stuart W. Cramer, L. F. Speer, and Fred T. Field. It was announced that the sixth position would be reserved as a roving commission for experts to be called in from time to time. This board was abolished October 1st, and replaced by a "committee on Review and Appeal."

The luxury tax and the excess profits tax were much criticized. President Wilson urged the repeal of the former in his message to Congress May 20th, citing its failure in other countries, but the attempt at repeal failed. Secretary of the Treasury Glass, in his annual report in December, 1919, cited the objections of the Treasury Department to the excess profits tax, especially as a peace measure, declaring that it discouraged all successful business activity, and was also an important factor in the high cost of living. He proposed to make up the loss which would come from its elimination by increases in the normal income tax and in the lower brackets of the surtax. He also urged such revision of the revenue law as would prevent evasion of Federal taxes by investment in tax-exempt and municipal bonds.

Total tax returns as compiled for the fiscal year ending June 30, 1919, were \$3,840,000,000,

as compared with \$3,695,000,000 for the previous fiscal year. Of this total, \$2,707,000,000 represented total taxes on wealth, including \$2,596,000,000 from income and profits taxes. As the new income and profits taxes are payable in instalments, however, about \$2,000,000,000 of the 1919 tax will not be received until the fiscal year 1920. Allowing for this, the proportion of taxes on wealth really ascribable to the year 1919 amounts to about 81 per cent, as compared with about 79 per cent for the preceding fiscal year.

THE STATES. Economic legislation in North Dakota was comprehensive, revolutionizing the tax and revenue Code. The classification of property Act divided all property into two classes, assessed at 100 per cent and 50 per cent respectively, of actual value. This was accompanied by an Exemption Act, providing for exemption of buildings and improvements upon farm lands. An income law was passed, dividing all incomes into earned and unearned, with rates accordingly. Several other minor measures bearing on taxation were passed.

The provisions of the New York State Income Tax Act which imposed a tax upon the income of a non-resident derived from personal services performed, or business transacted in the State, were held to be contrary to the Federal constitution by the United States District Court for the Southern District of New York. The case went to the United States Supreme Court on appeal by the State of New York, where it was argued December 15th. The decision is awaited as an important one.

The inheritance tax of New Jersey was sustained by the United States Supreme Court, as applied to the estates of non-residents within its jurisdiction.

The classification amendment to the State constitution of Ohio was defeated by the people when submitted to the voters at the November election. This came as a surprise since the provision was approved by the voters in November, 1918, but it was held up by a decision of the court which declared it invalid. The campaign was repeated, with confidence, merely to be defeated this time by the people themselves.

An amendment to the State constitution was passed in Utah providing for the taxing of incomes from mines.

CANADA. Contrary to expectations the business profits tax, outlined in the 1918 YEAR BOOK, remained in force so as to cover accounting periods ending on or before Dec. 31, 1919. Income tax percentages were much more drastic than in 1918, and the burden of the business profits tax was fully as heavy as in the preceding year.

The financial costs of the war for Canada up to March 31, 1919, were estimated to be \$1,327,000,000. For the current year less than \$70,000,000 of surplus revenue over ordinary expenditures is calculated on as an offset to war expense. Thus Canada must depend on large-scale borrowings for a long time to come.

Canadian banks paid approximately \$1,000,000 additional taxes during the fiscal year 1919. Every bank now pays $\frac{1}{4}$ of 1 per cent upon the average amount of notes of the bank in circulation. The right of the provincial governments to tax federally-chartered banks having been established, Nova Scotia and Saskatchewan stepped into the field with several fresh imposts; the tax

of Nova Scotia alone is estimated to amount to \$250,000.

GREAT BRITAIN. Total tax revenues in Great Britain for the fiscal year ending March 30, 1919, were £784,000,000, as compared with £613,000,000 the preceding year, and £514,000,000 for 1917. Those which could be classified as war tax revenues aggregated £621,000,000 in 1919, £450,000,000 in 1918, and £351,000,000 in 1917. The proportion of war expenditures met by war taxes has been computed to be 26 per cent for 1919, 18 per cent for 1918, and 17.5 per cent for 1917.

For the fiscal year ending March 30, 1919, tax receipts were as follows (in millions of pounds): Customs, £103; excise, £59; estate duties, £30; stamps, £12; land tax, £0.6; house duty, £2; income tax, £291; excess profits tax, £285; land value tax, £0.7. The total tax revenues of £784,000,000 comprised 31 per cent of Great Britain's total revenues, the large receipts from income and excess profits taxes contributing 11 per cent each to this figure.

FRANCE. Ordinary revenues in France during the war were greatly reduced since the territory invaded was the richest and best developed in the country. Furthermore, the economic confusion in the country, as well as the general political situation, made it difficult to impose any new taxes. Consequently, for the first three years of the war, tax revenues were actually smaller than before, insufficient even to offset ordinary peace expenditures. The result of the government's apparent timidity in levying taxes early, and its adoption of the loan policy as an alternative, was shown in the subsequent exaggerated rise in prices, the depreciation of the franc, and the very critical financial status of the country following the war.

M. Klotz, retiring Minister of Finance in France, in presenting a budget for 1920, estimated "ordinary expenses" at 18,000,000,000 francs, and "ordinary resources" at 9,500,000,000 francs. The deficit of 8,500,000,000 francs he proposed to make up in part by a tax on business turnovers of 1 per cent generally and 5 to 10 per cent for non-essential commodities; this tax is calculated to raise 4,000,000,000 francs, replacing the luxury tax now in force. Other resources included increased indirect and war taxes amounting to 1,800,000,000 francs, a tax on acquired wealth, of 1,500,000,000 francs, and others. The scheme leaves 222,000,000 francs unprovided for.

TEMPLE UNIVERSITY. A co-educational institution, supported largely by the State, located at Philadelphia, Pa. Productive funds for the year amounted to \$367,477. The enrollment for the summer of 1919 was 307, and in the fall it was 5058, with 326 members in the faculty. The School of Commerce is the largest in the university, the enrollment for the fall being there 2342. There is also a Teachers College, a High School, an Elementary School, and Schools of Theology, Law, Music, Medicine, Dentistry, Pharmacy, and Chiropody. The library contains 13,093 volumes. In 1919 the balance of the bequest of Charles Kolb was received, namely, \$78,503. Temple was founded in 1884. President, Russell H. Conwell, D.D., LL.D.

TENNESSEE. POPULATION. The population of the State in 1910 was 2,304,629, and on July 1, 1919, it was estimated to be 2,337,879, a gain of 16,000 during the past twelvemonth.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture

Crop	Year	Acreage	Prod Bu.	Value
Corn	1919	3,250,000	74,750,000	\$117,358,000
	1918	3,250,000	78,000,000	113,100,000
Oats . . .	1919	400,000	9,200,000	8,556,000
	1918	325,000	8,125,000	7,556,000
Wheat	1919	810,000	7,290,000	16,184,000
	1918	750,000	7,500,000	16,050,000
Tobacco .	1919	110,000	a 88,000,000	22,088,000
	1918	77,800	a 62,240,000	13,319,000
Hay	1919	1,280,000	b 1,792,000	48,384,000
	1918	1,240,000	b 1,674,000	40,176,000
Potatoes .	1919	48,000	c 1,120,000	5,366,000

a Pounds b Tons. c Bales.

EDUCATION. The school population as of July, 1919, was 810,291, an increase in the year of more than 22,000. Other statistics for 1919 are not available; but in 1918 the enrollment was 604,633, with an average daily attendance of 418,709. There were 11,880 teachers with salaries ranging from \$255 to \$645.

TRANSPORTATION. The total railway mileage of the State in 1919 was 4227.39. The trunk lines have the following mileage: Illinois Central, 142.70; Louisville & Nashville, 951.81; Nashville, Chattanooga, & St. Louis, 902.57; Southern Railway, 891.51; Tennessee Central, 290.76. See **CHILD LABOR**; **WORKMEN'S COMPENSATION**.

FINANCE. The balance in the State Treasury on Dec. 20, 1916, was \$68,164, and on Dec. 19,

1918, it was \$841,682. The gross receipts for this period amounted to \$16,193,659; and the total disbursements for the same period were \$15,420,141. The actual receipts were \$11,467,418. The principal items of expenditure were schools, charitable institutions, soldiers' pensions, maintenance of convicts, interest on the State debt, and administration. The total interest-bearing bonded debt outstanding at the end of the biennium was \$11,481,000.

CHARITIES AND CORRECTIONS. In 1915 the control of the charitable and penal institutions of the State were centralized under the Board of Control. The following table shows the institutions under its supervision, their location, expenditures for the period from December, 1917, to June 30, 1918, and the population on the latter date.

<i>Institution</i>	<i>Location</i>	<i>Expenditure</i>	<i>Population</i>
State Penitentiary . . .	Nashville	\$530,116	1,104
Brushy Mt. Prison . . .	Petros	427,896	631
Training and Agricultural School for Boys	Nashville	206,503	546
Industrial School . .	Nashville	221,709	707
School for the Blind . .	Nashville	83,618	207
School for Deaf and Dumb	Knoxville	87,871	240
Eastern Hospital for the Insane	Bearden	198,163	664
Western Hospital for the Insane	Bolivar	263,678	779
Central Hospital for the Insane	Nashville	256,398	781
Vocational Reformatory for Girls	Tulahoma	91,240	

OFFICERS. Governor, A. H. Roberts; Secretary of State, Ike B. Stevens; Comptroller, Jno. B. Thomason; Treasurer, Porter Dunlap; Auditor, S. P. Anderson; Attorney-General, F. M. Thompson.

JUDICIARY. Supreme Court: Chief Justice, D. L. Lansden; Associate Justices, Grafton Green, Frank P. Hall, Collin P. McKinney, N. L. Bachman.

TENNESSEE, UNIVERSITY OF. A non-sectarian co-educational State institution, founded in 1794. The colleges of liberal arts, engineering, agriculture, and law are located at Knoxville, and in the fall of 1919 had an enrollment of 673 men and 235 women, a total of 908. The colleges of medicine, dentistry, and pharmacy are located at Memphis, and had an enrollment of 131 men. The members of the faculty for the year ending June, 1919, numbered 233. The endowment of the university is \$425,000; the total income for the year ending June 30, 1919, was \$535,857. The library contains 42,243 bound volumes. During the year there were established courses for teacher-training in industrial arts, home economics, and agriculture, under the Federal Smith-Hughes Act. In 1917 the State Legislature authorized a bond issue to be used largely for new buildings, the amount available under this act for permanent improvements being \$900,000 plus interest accumulations. Owing to the war, there was delay in completing the plans for the buildings. The money is being used chiefly on the erection of a main building on the campus at Knoxville, an agricultural laboratory building, an enlargement of the Engineering Building, for buildings for the Experiment Station Farms at Knoxville and Columbia, and for a laboratory at the College of Medicine at Memphis. The most important gifts of 1919, are an

endowment of \$25,000 by Miss Mary Boyce Temple of Knoxville to promote plant and live stock breeding, to be known as the Oliver Perry Temple Foundation; and a gift of about \$30,000 by Mr. W. S. Shields of the Board of Trustees, for the purchase of land for an athletic and drill ground. President, H. A. Morgan, B.S.A., LL.D.

TENNIS. Tennis recovered all its prestige and popularity lost during the war years in 1919. William M. Johnston of San Francisco, who had earned the singles championship of the United States once before in 1915, captured the honors for the second time in 1919 by defeating William T. Tilden, 2d, of Philadelphia in the final round of the tournament held at Forest Hills, L. I. Johnston had been out of the game for almost two years, during which he was first an ensign and then a junior lieutenant in the navy, but he had little difficulty in emerging victorious over younger rivals who had the advantage of practically continuous playing during the war period.

The doubles championship was won by Norman Everard Brookes and Gerald L. Patterson of Australia who defeated William Tilden, 2d., and Vincent Richards of the United States in the challenge round played on the courts of the Longwood Club near Boston, Mass. Both Brookes and Patterson also competed in the singles tourney at Forest Hills, the former bowing to Johnston after a thrilling five-set match and the latter going down to defeat at the hands of Tilden.

Mrs. George W. Wightman regained her national women's title by defeating Miss Marion Zinderstein of Boston in the final round. Miss Zinderstein had previously conquered Mrs. Franklin I. Malloy, the former Miss Molla Bjurstedt and defending champion in the semi-final round. The Norse star, who had been the sensation of the courts for several seasons, was far from her best all through 1919 because of an injury suffered early in the spring.

The Davis Cup matches were resumed during the year, England winning the preliminary ties and sending a team to Australia to play the Antipodeans. These matches were scheduled for January of 1920.

A summary of the principal tournaments held in the United States during 1919 follows:

National Singles Championship, Forest Hills, L. I., final round, William M. Johnston, San Francisco, defeated William T. Tilden, 2d, Philadelphia, 6-4, 6-4, 6-3.

National Doubles Championship, Boston, Mass., final round, Norman E. Brookes and Gerald L. Patterson, Australia, defeated William T. Tilden, 2d., and Vincent Richards, United States, 6-1, 6-3, 3 6, 7-5.

National Clay Court Championship, Chicago, Ill., singles, final round, William M. Johnston defeated William T. Tilden, 2d., 6-0, 6-1, 4-6, 6-2; doubles, final round, Johnston and Samuel Hardy defeated Robert Kinsey and Axel Gravem, 6-3, 6-1, 2-6, 6-3.

Women's National Championship, Philadelphia, singles, final round, Mrs. George W. Wightman defeated Miss Marion Zinderstein 6-1, 6-2; doubles, final round, Miss Marion Zinderstein and Miss Eleanor Goss defeated Mrs. George W. Wightman and Miss Eleonora Sears 10-8, 9-7; mixed doubles, final round, Miss Marion Zinderstein and Vincent Richards defeated Miss

Florence A. Ballin and William T. Tilden, 2d., 2-6, 11-9, 6-0.

Junior and Boys' Championships, Forest Hills, junior singles, final round, Vincent Richards defeated A. H. Chapin, jr., 6-2, 7-5; boys' singles, final round, Arnold W. Jones defeated Walter Evans 6-0, 6-3, 6-4; junior doubles, final round, Frank Anderson and Cecil Donaldson defeated Philip Neer and Vincent Richards 6-0, 2-6, 6-4, 6-1; boys' doubles, final round, W. W. Ingraham and A. W. Jones defeated L. Farquhar and Fred Haas 6-3, 6-3, 7-5.

National Indoor Championship, New York City, singles, final round, Vincent Richards defeated William T. Tilden, 2d., 3-6, 6-3, 6-8, 6-1, 6-4; doubles, final round, Richards and Tilden defeated Fred B. Alexander and Dr. William Rosenbaum 6-4, 3-6, 6-2, 2-6, 6-1.

Women's National Indoor Championship, New York City, singles, final round, Mrs. George W. Wightman defeated Miss Marion Zinderstein 2-6, 6-1, 6-4; doubles, final round, Mrs. Wightman and Miss Zinderstein defeated Mrs. A. Humphries and Miss Bessie Holden 6-1, 6-1.

National Girls' Championship, Chestnut Hill, Pa., singles, final round, Miss Katherine Gardner defeated Miss Elizabeth Warren 6-4, 5-7, 6-3.

TERAUCHI, Field Marshal Count SEIKI. Former prime minister of Japan and governor-general of Korea, died at Tokio, November 5. He had been Prime Minister from October, 1916, to September, 1918, when the cabinet resigned to give place to the ministry of Takashi Hara. He was born at Choshu in 1852, being a member of the famous Choshu clan which produced other important statesmen of our time such as Prince Yamagata and Prince Ito; entered the army in 1871; became a major in 1879; and after studying military science in France in 1882 became secretary to the war minister. From this time he rose rapidly from one staff position to another and in 1897 he was made inspector-general of military education. During the war with Russia he was minister of war in the Katsura cabinet, distinguished himself for his thoroughness and organizing power. When the difficult task of organizing the newly annexed territory of Korea arose, he was chosen as the best man to deal with it. Appointed governor-general in 1910, he pursued a policy of firmness and at the same time conciliation and succeeded in thoroughly enforcing the new system. He took over the police powers and stationed Japanese troops in all the provinces. At the same time he carried on valuable work in internal improvement, and in the development of agriculture, and education, which bore permanent witness to his foresight. When he was called to the premiership in 1916 there was a sharp political contest in Japan between the bureaucracy and the democratic element. As he represented the conservative members of the former class, he was bitterly attacked by champions of representative government. He was supported only by a minority, and the measures that he submitted to the house of representatives were defeated. A vote of lack of confidence was averted only by the Emperor's dissolution of the House for which new elections were ordered in April, 1917. Among the grounds of attack upon him was the charge that he represented the military faction and the reactionary element opposed to party government. There were also many stories indicating his hostility to responsible government and to the press.

There was no means, however, of authenticating these reports so far as they were circulated in the western press, and the precise state of affairs during his premiership was not known. As to the war his policy was vigorous and made sure that Japan should do her part. As to Japan's relations to the United States, he had declared his aim to be the promotion of friendly relations. In general the accounts of him indicate the possession of a strong character and great abilities combined with certain prejudices and reactionary opinions, objectionable to the progressive element in his country. A singular circumstance in connection with his death was that it was definitely reported about 10 days before its actual occurrence and the report was believed not only throughout the world but even in quarters in Japan where he was known. The Court bestowed honors on him such as were customary for the dead and letters and telegrams of condolence by the hundreds were received by his wife. He appeared to have fallen into a state of unconsciousness which was mistaken for death and he reported in his diary that he could not remember anything that happened on October 20th and 21st. He afterwards recovered but relapsed.

TERRESTRIAL MAGNETISM. The non-magnetic ship *Carnegie*, of the Carnegie Institution of Washington, on October 10th left Washington for a two years' cruise, tracing through the South Atlantic and Pacific Oceans the various magnetic elements required in the magnetic survey of the world which was being undertaken by the Division of Terrestrial Magnetism of the Carnegie Institution. The *Carnegie* was laid up at Washington during the war, and this, the fifth cruise, was begun to complete the previous observations made in other cruises.

TETRAZZINI, LUISA. See MUSIC, Artists, Localists.

TEXAS. POPULATION. The population of the State in 1910 was 3,896,542, and on July 1, 1919, it was estimated to be 4,687,136, a gain during the twelvemonth of 85,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acres	Prod Bu.	Value
Corn	1919	6,760,000	202,800,000	\$239,304,000

a Tons b Bales.

TRANSPORTATION. The railway mileage of the State in 1919 was 20,073; of this, 86 miles of new first track were built in the year. See COTTON; ROADS; MINIMUM WAGE.

OFFICERS. Governor, William P. Hobby; Lieutenant-Governor, W. A. Johnson; Secretary of

State, George F. Howard; Treasurer, John W. Baker; Auditor, H. B. Terrell; Attorney-General, C. M. Cureton.

FINANCE. The total receipts for the fiscal year 1917 amounted to \$28,846,583; the disbursements, \$24,525,493. The balance at the beginning of the year was \$1,510,002, and at the end of the year it was \$5,831,092. The total debt of the State was \$5,811,410.

CHARITIES AND CORRECTIONS. The following is a list of the State institutions: Lunatic Asylum, Austin; Deaf and Dumb Asylum, Austin; North Texas Insane Asylum, Terrell; Southwestern Insane Asylum, San Antonio; Orphan Home, Corsicana; Epileptic Colony, Abilene; School for the Blind, Austin; Confederate Home, Austin; Tuberculosis Sanatorium, Carlsbad; Deaf, Dumb and Blind Institute, Austin; Confederate Women's Home, Austin; Juvenile Training School, Gatesville; Girls' Training School, Gainesville; Feeble-minded Institute, Austin; Asylum for Negroes, Rusk.

TEXAS, UNIVERSITY OF. A co-educational State institution, founded in 1881 at Austin, Texas. There is a medical department at Galveston, Texas. The enrollment of the university was enlarged in 1919. Much work was done during the war, for the government, at great expense to the State and the university. President, Robert E. Vinson, LL.D.

TEXTILE MANUFACTURING. In 1919, the resources of the world's textile industry were called upon to meet demands for clothing on an unprecedented scale, due to the shortages produced by the ravages of war and the consequent curtailment of production, ranging from raw materials to finished product. As a necessary corollary of this condition, must be considered the reduced capital and purchasing power of the countries which suffered the most, and the increased purchasing power of the working classes of many of the countries which suffered little, if any, direct effect of the great conflict. Thus in Belgium and France, and in Italy to a less extent, four years of war wrought vast damage to textile plants; but in 1919 every effort was made to reestablish the industry. In central Europe the absence of raw materials was the most serious consideration, and what were once vast industries in Czecho-Slovakia, Poland, Germany, and Austria were unable to secure the necessary cotton and wool to become a large factor either for local or export production.

In textiles, as in other industries the world over, labor questions were serious, and in the Allied countries there was established a working week of 48 hours in place of 56 to 63 hours in vogue before the war. The result of this measure was a decrease in production computed at about 12 per cent for Allied Europe, there being but few instances where greater efficiency was able to offset in proportion the decreased working time. For American textile plants a similar decrease was reported, though due in large measure to strikes. In fact, the Far East was the exception to the limited expansion of the textile industries, and here mills were being built, equipped and operated on an extended scale, though the Japanese were delayed in securing machinery and other needed equipment for which they had placed orders.

There was published during the year, by the War Industries Board at Washington, a series

of pamphlets showing and discussing the course of prices during the war. This matter was of special interest in view of subsequent developments. The pamphlets dealt with the various major industries, and the range of prices for the leading textile products during the five years, as shown, is summarized herewith, though reference should be made to the original documents for a very thorough discussion of causes, effects and general progress.

COTTON AND COTTON GOODS

In the American textile industry a serious feature of the year was the decreased production made possible by the large profits to capital, and the increased wages when working on certain restricted lines, rather than aiming to secure maximum production with a consequent reduction of prices to the general consumer. As a result of limited output in many lines of textiles, goods were allotted by the mills and their agents to anxious customers, and in such allied industries as the clothing trades there was, as a result, high prices and shortage of production, with an especial demand for the better fabrics.

With cotton prices climbing during the year, after an initial recession in February and again in September, reaching a maximum of 40 cents, it was, of course, natural that cotton futures should rise in proportion, and as a further stimulative there was an increased foreign demand. At the end of the year practically all cotton goods stood considerably in advance of the closing prices of 1918. See COTTON.

In the woolen and worsted industries in the United States, the year saw a transformation from a low-priced to a high-priced market, with an active demand developing at the end of the year. In men's wear there was a decreased production and increased prices, and the same held true in dress goods where, in the second half of the year, prices moved up from 50 to 100 per cent. See WOOL.

The fabrics entering into clothes were more expensive than ever before, not merely on account of the general increase in prices, but in large measure on account of the demand for finer fabrics made up of the finer grades of wools of which the supply was limited, the

shortage in the world's supply of finer wools being estimated at the end of the year at 200,000,000 pounds. William M. Wood, President of the American Woolen Company, late in December summarized the reasons for high prices, from the standpoint of the manufacturer, as follows:

"First, the people demand cloth of fine wools, and will buy no other. They will not take fabrics containing the coarser wools, although much cheaper in price.

"Second, there is a shortage in the world's supply of fine wools amounting to some 200,000,000 pounds.

"Third, our government released to the British government some 66,000,000 pounds, which if it had been held here would have helped us out a little.

"Fourth, and lastly, because our government has so conducted the sale of its own wools as to sustain these tremendously high prices, especially of the finer wools which are in such great demand.

"It is my belief that as long as people continue to demand clothing made of wool which costs anything like \$2.75 a pound, the price of clothing is not going to be much reduced. If our people would consent to wear good, substantial, durable clothes made of the coarser wools, clothing could be purchased at considerably lower prices than those which now prevail."

An interesting record of the wool and worsted industry is shown in the monthly reports of the engagement of machinery, made by the Bureau of the Census. The report showing the status of the industry on Dec. 1, 1919 presents a summary of reports from 924 manufacturers. The data together with percentages for 12 preceding months for comparison, follow:

MACHINERY REPORTED AS OF NOV. 1 1919

	Wider than 50-inch reed space	Looms Under 50-inch reed space	Carpets and rugs	Sets of cards	Combs	Spinning spindles	
						Woolen	Worsted

Dec. 1, 1918	22.5	24.9	58.0	13.8	17.8	16.1	27.4

In knit goods and hosiery the year, after opening weak and with fluctuations, saw increased demands and appreciation of values, ranging all the way from underwear, where there was limited production, to hosiery where, from cotton to silk, the demand was sustained and prices rose. In hosiery the only small demand was in low-ends of which stocks had accumulated.

NEW ENGLAND COTTON MILLS. The cotton mills of New England enjoyed a prosperous year

in 1919 and the dividends distributed at Fall River were the second largest in the history of the local industry. It was stated that the dividends paid during 1919 by the listed cotton manufacturing corporations of the city showed a total of \$4,853,895, being the second largest total in the history of cotton manufacturing there. The largest total was that of 1918, when it was \$6,076,326, exceeding this year's total by \$1,222,431. The total of 1917 was the third largest, being \$633,785 lower than the total of 1919.

The average rate for 1919 was 14.486 per cent, for 1918 18.462 per cent, and for 1917 12.822 per cent. There were 38 corporations listed, all cloth manufacturing concerns except Shawmut Mills, which made yarns for its finished product.

At New Bedford the year 1919 proved to be fully as profitable a period for the fine cotton goods mills as 1918 and the dividend distribution for the year was slightly in excess of that for 1918. The total for all those New Bedford issues on which the dividend rate was publicly announced was \$6,441,175 for 1919 as against \$6,153,340 distributed by the same corporations during 1918. The difference of less than \$390,000 made approximately one-half of one per cent difference in the average yearly rate, which was 13.584 per cent for 1919 as compared with slightly less than 13 per cent for the previous year.

SOUTHERN COTTON MILLS. The year 1919 saw a greater amount of building and enlargement of cotton factories in the cotton-growing States than ever before was experienced since this industry had been located in the south. The established plants had been unusually successful in the earning of dividends in the period after

the armistice, and were putting back in the form of capital outlay for plant and equipment a large part of their earnings, together with new investments. Experience had shown that the most successful field for southern textile activity was in the production of the finer grades of cloth and big quantities of yarn demanded by the knitting mills. In addition, many of the new mills were spinning yarn for hosiery mills. In the direction of new equipment, New England was furnishing most of the textile machinery for

the southern mills, and the machinery works of that section had contracts on file for several years of their production to meet the needs of southern textile mills.

The total of spindles and looms in the reports of 1919 is 770,000 and 11,000 for both the new and enlarging mills. Conservatively estimated at \$300 for looms and \$70 for spindles, a proper figure for an average according to mill engineering experts, these spinning and weaving equipments indicated an investment of \$58,900,000 for the spindles and \$3,300,000 for the looms, with their accompaniments in the way of buildings, etc.

TEXTILE MILL CONSTRUCTION. In new mill construction during 1919 there was an increase over the previous year which doubtless would have been greater if mill equipment could have been more readily obtained from the manufacturers of machinery who were unable to meet the demand for new looms, spindles, etc. The high cost of construction also had a deterrent effect upon a number of new projects in the textile as in other industries, although in some cases manufacturers felt justified in view of existing business and anticipated conditions in securing increased plant facilities even at an abnormal cost, although many concerns did not take this condition into consideration at all, believing that their increasing business would warrant any outlay in expense. According to the authoritative summary of mill construction annually compiled by the *Textile World Journal* there were 289 new mills erected, a number in excess of 1918 but not reaching the mark attained in 1917. The average for 10 years was 260.

Comparison of new mill construction of the 10 years 1910-19 follows:

	1919	1918	1917	1916	1915
Cotton	74	29	52	51	24
Wool	54	24	24	23	19
Knitting	84	120	97	113	111
Silk	61	49	86	60	25
Miscellaneous	16	27	38	33	40
Total	289	254	297	280	219

	1914	1913	1912	1911	1910
Cotton	26	27	37	32	67
Wool	21	24	24	20	31
Knitting	110	142	122	92	113
Silk	51	54	46	38	34
Miscellaneous	37	30	36	26	29
Total	245	277	265	208	274

In the above summary for 1919 the most impressive development is that of the cotton mills. There were to be noted 74 mills or large additions, and in this division of textiles the yarn industry made the greatest gain, 22 new mills being listed under hosiery and fine and coarse yarns, while auto tire fabrics follow with five, heavy ducks also being included in the product of some of the latter plants. As regards distribution by States North Carolina led in new mill construction, with Rhode Island, Massachusetts, Georgia, and South Carolina, following in the order named. The large plant of the Pacific Cotton Mills Company, at Los Angeles, Cal., operated by the Goodyear Tire & Rubber Co of California was cited as a striking addition to the leading cotton mills of the year.

In addition to new construction conditions in the industry were such that many old established

concerns made important enlargements and improvements to their plants during 1919.

The new woolen and worsted mills of 1919 were fairly well distributed; five were in New England, four in Pennsylvania, three in New York, two in California, one each in Portland, Ore., and Chicago, Ill. In the Dominion of Canada three new mills were built. The majority of the new woolen and worsted mills however were not of large size in comparison with the extensions made by old companies, as notable additions and improvements were made to a number of plants already in operation.

While the gain in new mills for the knitting industry was not so great as in 1918, when 120 mills were built, it was however marked and important. Thirteen new mills were built to be operated on sweater coats, located principally in New England, New York, and Pennsylvania; while silk hosiery was to be the produce of nine new plants covering the same States with the addition of New Jersey. The new mills of the Southern States were to confine their operations to cotton or mercerized hose. Jersey cloth continued in demand and was manufactured by seven new concerns.

Numerous enlargements and improvements to knitting mills were made on an extensive scale, and the purchase or leasing of existing mills was a feature of the 1919 expansion.

The silk industry continued to locate and show the greatest expansion in New Jersey and Pennsylvania. In these States new mills were built and many new concerns occupied old plants or leased space in established mills.

The miscellaneous mills included in the table comprised 10 whose activities embraced dyeing, bleaching, and finishing.

BRITISH TEXTILES. During the year 1919 a total of 162,666,000 pounds of cotton yarn was exported, as compared with 87,288,000 pounds for the year 1918. The total in piece goods exports in 1919 was 3,528,757,000 yards, as compared with 3,699,253,000 yards for the year 1918. These figures were subdivided as follows:

	Yards	
	1919	1918
Gray goods	841,358,000	754,098,000
Bleached	1,084,083,000	1,200,715,000
Printed	690,829,000	809,353,000
Dyed	912,487,000	935,087,000

During the year 1919 a total of 24,651,000 pounds of worsted yarns were exported, as against 13,874,000 pounds for the year 1918. Exports of woolens were 130,988,000 yards in 1919, compared with 67,383,000 yards in 1918, and of worsteds 33,266,000 pounds in 1919, compared with 31,081,000 pounds in 1918.

In Great Britain there was a reduction in output, partly accounted for by a 14 per cent reduction in working hours and by the fact of a smaller number of operatives and that some of the machinery is not up to normal.

According to a statement dealing with 23 cotton spinning companies, the profit of their share capital was 35.95 per cent, as compared with 34.34 per cent for 1918. The percentage of profit on share and loan capital combined was 25.84 per cent, compared with 21.90 per cent in 1918. The 23 companies made a combined profit of £340,000, which gives an average profit of £14,786 a company. These companies had a

prosperous year from the dividend point of view and perhaps constitute about the best group of mills in Lancashire.

In addition to dividend distribution, it was further stated that they had amassed considerable reserves. A computation was made on 100 companies with a share of capital of £4,723,475. The average dividend paid by these companies was 21.34 per cent on share capital. Undoubtedly there was also a large amount of loan capital which had been held at low rate of interest. Many of these companies have issued a bonus in addition to dividends, and some of them have recently increased their nominal capital by bonus additions which have been paid out of reserves. In this connection it was of interest to recall that these profits were being studied by the operatives as a basis for future wage demands. According to some views the coming year will be a test for many of the Lancashire cotton mills, particularly those that have been refloated during the past months or which have increased their capital value to make it consistent with the present price of money. The figures quoted above represent little more than one-sixth of the entire spindleage of Great Britain and, of course do not afford a fair idea of what was done in the whole of the Lancashire cotton industry.

FRANCE. Prior to the war, in 1912, France had 140,000 looms, of which 110,000 were machine, and 10,000 hand looms. The coming of the war was particularly unfortunate, as it overtook France in a period of rapid industrial growth. From 1910 to 1912 her production of cotton textiles, including hosiery, lace and other trimmings, and the like, had increased from 120,000 tons to 225,000 tons. She imported some 24,392 tons of finished cotton products—and she exported 50,613 tons. Of the cotton textiles imported into France, Great Britain furnished 50 per cent and Germany 32 per cent. Of the cotton textiles exported by France, French Colonies took 55 per cent. Under the post-armistice conditions by adding the 46,000 looms of Alsace and keeping the same proportions for the normal year when it comes again, France would have a production of 273,000 tons of cotton textiles, of which she could export 96,000 tons.

These significant figures do not include the production of cotton threads and yarns and their waste, for whose manufacture France had before the war 7,500,000 spindles. In this line French production yielded 197,500 tons, which was 5 per cent of the world's production. This was about the figure of French consumption, the few exports (9000 tons) being balanced by the imports. Alsace-Lorraine added 1,700,000 spindles, which would bring up French production—when ever the ruined factories of the regions devastated by the Germans are reconstructed—to a point where it would be possible for France to export 12,000 tons clear. It was the opinion of experts, expressed in terms of import and export, that France—after reconstruction—should have 9,425,000 spindles, 166,000 looms, and 290 machines for cotton prints. To keep these working, she would need each year 338,000 tons of raw cotton—and this must be supplied by imports, as, with the French activity and ability to reestablish, the textiles factories will be in active operation long before her colonies can supply any considerable portion of this amount. France should produce 205,000 tons of cotton threads

and yarns, of which she will be able to spare 36,000 tons to sell abroad, and 272,600 tons of textiles, of which 100,000 tons will be available for exportation. See SILK.

TEXTILES. See CHEMISTRY, INDUSTRIAL.

THAYER, STEPHEN HENRY. Banker and author, died in New York city, December 17. His death occurred on his 80th birthday. He was born at New Ipswich, N. H., Dec. 16, 1839. He engaged in banking and was a member of the New York Stock Exchange for 35 years. He had been in the early part of his life a director in several steamship and mining companies. Later he devoted a large part of his time to editing and writing, and was financial editor of the *Christian Union* and *Outlook* from 1883 to 1894. His books include, *Songs of Sleepy Hollow* (1886); *Songs from Edgewood* (1902); and *Daughters of the Revolution*, a novel (1900); and he was the author of various essays on American and British poets.

THEOSOPHICAL SOCIETY. An international society whose president is Mrs. Annie Besant, with headquarters at Adyar, Madras, India. The American section has its headquarters in Krotana, Hollywood, Los Angeles, Cal., where the Krotana Institute is maintained. The society originally had its headquarters in New York, but they were removed to India in 1879. At the close of the fiscal year, the American section consisted of 198 lodges, with a total active membership of 7048, a slight increase over 1918. The National Publicity Department issued a number of booklets on subjects related to theosophy, notably, *The Power and Use of Thought*, by C. W. Leadbeater; *Memory Training*, by Ernest Wood; *Modern Science and the Higher Self*, by Mrs. Annie Besant; and *Intuition and Consciousness*, by Francesca Arundale. The officers for 1919 were: President, A. P. Warrington; secretary, Foster Bailey; acting dean of Krotana Institute, Dr. F. F. Strong.

THOMAS, CALVIN. American educator and Germanic scholar, died in New York, November 5. He had been head of the department of Germanic languages and literatures at Columbia University for 23 years. He was born at Lapeer, Mich., Oct. 23, 1854, graduated at the University of Michigan in 1874, taught Latin and Greek at a high school in Grand Rapids, 1874-77, and then studied for a year at Leipzig. In 1878 he became instructor of German in the University of Michigan, where he was appointed to the chair of Germanic languages and literatures in 1886, holding that position for 10 years. After 1896 he held the corresponding chair at Columbia. He was regarded as one of the best Germanic scholars in the country, and by his vigorous and interesting personality exerted a strong influence in educational circles. Unlike many other Germanic specialists in the United States he was outspoken in his hostility toward Prussianism during the war, and condemned the tendency of certain professors of German to sentimentalize in regard to the German character in that time of stress. His contributions to Germanic philology and literature were very numerous, and included, apart from numerous writings and monographs, the following books: *A Practical German Grammar* (1895); *Life and Works of Schiller* (1901); *German Literature* (a history, 1909); *Goethe* (1917). He edited: (English intro., and notes) *Goethe's Torquato Tasso* (1888); *Goethe's Faust* (First Part, 1892; Sec-

ond Part, 1897); Goethe's *Hermann und Dorothea* (1891); *An Anthology of German Literature* (1909); also other German classics for school and college use.

THOMAS, CHAUNCEY. Rear admiral in the United States navy, died at Pacific Grove, Cal., May 12. He was born at Barryville, N. Y., April 27, 1850, and graduated third in his class at the Naval Academy in 1871. He served during the Spanish-American War, being at that time lieutenant-commander and commander and he was made rear admiral on March 10, 1910. Besides other duties he served in the hydrographic office, 1894-96, and the Philippine Insurrection in 1900-01, in which he was executive officer of the *Yorktown*, taking part in several engagements. In 1908 he took the battleship trophy for excellence in target practice. Among his later services may be mentioned that of president of the board of inspection and survey for ships and commander-in-chief of the United States Pacific fleet. He was retired from active service April 27, 1912.

THOMPSON, DWINELL FRENCH. College professor, died at Troy, N. Y., April 19. He was born at Bangor, Me., Jan. 1, 1846, and graduated at Dartmouth in 1869. After 1872 he was professor of descriptive geometry and drawing at the Rensselaer Polytechnic Institute and after 1916 was professor emeritus. He edited works pertaining to draughtsmanship.

THOMPSON, JOSEPH B. Congressman, died at Glen Cove, L. I., March 8. He was born in Grayson County, Texas, April 29, 1871, and graduated at Savoy college, Texas, in 1890. Two years later he was admitted to the bar and practiced in Indian Territory. He was a delegate to the Democratic National Conventions of 1900, 1904, and 1908, and was a member of Congress from 1913 to 1919.

TIBET. An extensive region forming a dependency of China, reaching from the Pamirs eastward to the frontiers of China. Estimated area 463,200; estimates of population vary from 1,500,000 to 6,000,000; a probable estimate, about 2,000,000. Capital, Lhasa, with a population of from 15,000 to 20,000. Agricultural methods are primitive. Gold, borax, and salt are products. Trade is chiefly with India and China. In 1916-17 imports from India were £144,749, and the exports to India were £331,079.

TICK ERADICATION IN CATTLE. See VETERINARY MEDICINE.

TILFORD, HENRY MORGAN. American financier, died in New York City December 3. He had been vice-president of the Standard Oil company of New York, and for more than 20 years one of the chief influences in the Company. He was born at Lexington, Ky., in 1857; entered the Standard Oil company in 1887 and was active in promoting the business in the West. He was subsequently called to New York which remained his headquarters. He retired from active service in 1911.

TIMBER. See FORESTRY.

TIN. The embargo on the importation of tin into the United States continued until Aug. 1, 1919, and this together with disturbed conditions of exchange affected the market, which fluctuated almost as much as in 1918. As the exchange value of the pound fell in New York the lower became the import cost there and conversely the higher went prices in London. The average London price of tin before the war in

1911, 1912, and 1913, was £201 per long ton, and this when compared with the low value of the pound on the sole basis of exchange value would involve the marking up of the price to £268. This however was but one of the factors governing the tin market in 1919 and it came out that in the previous year the War Industries Board in the United States had made large purchases so that an American supply was assured. The war surplus brought over and the imports of the year as will appear from the tables below gave the United States an ample visible supply at the end of the year though considering all nations and services not sufficient to reduce prices in the immediate future. The fluctuations in the prices of tin at New York and London during 1919 and previous years will appear from the accompanying table from the *Engineering and Mining Journal* (New York):

MONTHLY AVERAGE PRICES OF TIN IN
1917, 1918, AND 1919

Mo.	New York			London		
	1917	1918	1919	1917	1918	1919

(a) No average computed

New York in cents per pound, London in pounds sterling per long ton.

The highest and last price in London for standard tin was £341¼.

The New York Metal Exchange for the first time since the war compiled statistics covering the movements of tin during the year 1919, including shipments from points of production, deliveries and visible supply. In order to make comparisons with normal times the figures for 1919 are contrasted with corresponding items of 1913.

The figures represent tons of 2240 pounds. They are given as follows:

SUPPLIES			
Shipments from—	1919	1913	
Straits Settlements	49,763	62,500	
Australia	2,900	3,200	
Bolivia	25,824	24,850	
South Africa	5,544	3,200	
China to Europe and U S	565	2,450	
Banka sales	14,291	14,800	
Billiton sales	981	2,200	
Production in Cornwall	3,800	5,800	
Grand total	103,668	119,000	
DELIVERIES			
	1919	1913	
London deliveries	19,037	17,897	
Continent of Europe	10,656	25,631	
Cornwall production figured as delivered	3,800	5,800	
Arrivals of Bolivian in Europe	14,228	24,850	
African production figured as delivered	5,544	3,200	
Arrivals of Chinese in Europe	400	2,450	
United States	43,897	45,551	
Grand total	97,562	116,079	

VISIBLE SUPPLY

	Year ending Dec. 31,	
	1919	1918
London—

Total	43,897	67,881	62,730	60,061

Classification of tin imports into the United States January 1 to December 31:

	1919	1918
Straits	26,225	34,243
Australian	1,675	3,345
Banka and Billiton	2,271	7,590
English	4,700	6,647
Chinese	165	5,967
Sundries	368	235
Total, tons	35,404	58,027

Comparative statement of arrivals of Bolivian tin ores, etc., in Europe and the United States reduced to fine tin (in tons of 2240 pounds) gave European receipts for 1919 as 14,228 tons as compared with 17,329 tons in 1918, and United States receipts 11,596 tons in 1919 as compared with 9854 in 1918.

In view of the fact that through the Straits Settlements come the world's largest supplies of tin the industry in the Federated Malay States is worthy of attention. The value of the 37,370 tons of tin exported from the Federated Malay States in 1918 was £11,032,234, which compared with £8,489,610, the value of the 1917 export of 39,833 tons. The Customs record of exports from each of the four States was as follows:

	1917		1918	
	Tons	Value £	Tons	Value £
Perak	24,643	5,264,215	22,984	6,794,986
Selangor	10,960	2,323,541	10,744	3,171,762
Negri Sembilan	734	157,346	625	181,969
Pahang	3,496	744,508	3,017	883,517
Total	39,833	8,489,610	37,370	11,032,234

The amount of export duty collected in 1918 was £1,533,240, compared with £1,102,193 in 1917 and £928,031 in 1916, in both of which latter years the export was larger. The explanation was that duty was paid on a sliding scale based on the price of tin. To the 1918 revenue for duty had to be added £226,192 raised as a war tax by the States for contribution to the

Y-B-19-22

Imperial Exchequer. This special surtax was suspended on December 28th. In 1918 the highest price for tin constituted a new record.

In 1918 the idle plant in the Malay States was extensively employed, and every machine available and able to be repaired was used. Fourteen bucket dredges operated in Perak, one in Selangor, and one in Pahang. The total output by bucket dredges was 3299 tons. The geological survey of the Malay States was interrupted in 1918, due to the absence of the government geologist and his assistant on war service. The employment of a staff of economic mining geologists was under consideration, and various methods developed in which conservation of resources was contemplated, as it was stated that the tin deposits in the Federated Malay States were by no means inexhaustible. See CHEMISTRY, INDUSTRIAL.

TIROL. An Alpine region which before the disruption of the Austro-Hungarian Empire was a crownland of Austria, making up the greater part of the administrative district of Tirol and Vorarlberg; with Bavaria on the north and Salzburg and Carinthia on the east. Area 10,302 square miles; population according to the census of Dec. 31, 1910, 946,613.

TOBACCO. The tobacco crop in the United States, in 1919, amounted to 1,389,458,000 pounds, being surpassed only by the crop of 1918 with 1,439,071,000 pounds. The production in 1919 was nearly 300,000,000 pounds above the five-year average. The acreage was the largest ever planted, despite warnings against plunging in that crop as a result of high prices due to war conditions. Four large crops have now been grown in succession, and the domestic manufacture of leaf tobacco has shown a large increase due mainly to the increased production of cigarettes.

Tobacco has become one of the great sources of revenue to the government in the United States. The total receipts for all tobacco taxes during the fiscal year 1919 amounted to \$206,003,091.84, an increase of \$49,814,431.94 or 31.8 per cent over the preceding year. The total receipts were lower than originally estimated because considerable quantities of tobacco were withdrawn tax free for the use of the army and navy, and manufacture was somewhat curtailed by transportation and labor shortages. The rapid increase since 1910 in the number of cigarettes manufactured compared with the number of cigars is an important tendency in the industry. In 1919 the number of cigarettes was 46,500,000,000 while that of cigars was approximately 8,000,000,000, the same as in 1910. For the first time the amount of leaf used in cigarette manufacture was larger than in the manufacture of cigars, the amounts being approximately 177,000,000 and 162,000,000 pounds, respectively. The largest increase in revenue was from cigarettes and the smallest from little cigars. The success of the prohibition movement in the United States was followed by organized agitation against tobacco.

Tobacco consumption in Japan has increased greatly from year to year. The total value of the product manufactured and disposed of in that country for the fiscal year ended March, 1919, was reported as \$65,294,793.

TOBAGO. See TRINIDAD AND TOBAGO.

TOGO. Formerly a German colony in West Africa constituting a Protectorate and situated

on the coast between Dahomey and the Gold Coast. It surrendered unconditionally to the Entente Allies in August, 1914, and its political status was the subject of determination along with that of the other German colonies at the Peace Conference in 1919. Area, 33,700 square miles; colored population (1913), 1,031,978; European population (estimated in 1918), 110. It was the smallest of the German African colonies but had a larger average population per square mile than any of the others. The southern half of the region is peopled by natives of very divergent linguistic type, speaking some 30 different languages. The northern half is inhabited by tribes descended from Hamitic stock. The soil is fertile in the coast region where the chief products are corn, yams, tapioca, ginger, and bananas. The chief trade is in palm oil, palm kernels, and gum. There are plantations of palms, cocoa, coffee, manioc, kola, rubber, fibrous plants, etc. The imports in 1917 were £345,866; exports £473,774. It was invaded by French and British forces in 1914 and after the surrender of the Germans (August 7th) was provisionally divided into two spheres; one administered under the Government of the Gold Coast (British) and the other under the Government of Dahomey (French).

TONGA or the **FRIENDLY ISLANDS**. Three groups of islands in the Pacific Ocean, constituting a French Protectorate; lying between 15° and 23° 30' south and 173° and 177° west. Area, about 390 square miles; population (estimated 1917), 23,766, consisting of 22,590 Tongans, 300 half-castes, 529 other Pacific islanders, and 347 Europeans. The natives have been for the most part Christianized. Capital, Nukualofa.

TONGKING. A territory annexed by the French in 1884 and now comprising the northernmost division of the colony of French Indo-China: bounded on the north by the Chinese provinces of Kwangsi and Yunnan. Capital, Hanoi, with a population (1915) of about 150,000. Hanoi is the capital also of French Indo-China. The chief crop is rice. Other products include corn, sugar cane, silk, cotton, coffee, fruit, and tobacco. See **FRENCH INDO-CHINA**.

TORONTO, UNIVERSITY OF. An institution of learning, located at Toronto, Canada. In the fall of 1919 there were enrolled 4332 students, and over 500 members in the faculty. The income for the year 1918-19 was \$984,733, and the expenditure \$1,191,602. The deficit of \$200,000 was met through a special grant from the government. The assessed valuation of the university proper, as of June 30, 1919, was \$7,776,887. The library contains 158,474 volumes. In 1919-20 a six-year course in medicine was introduced, leading to the degree of M.B. In the fall of 1919 there were enrolled in the College of Medicine 1089 students. A gift of \$500,000 was received from Sir John and Lady Eaton for medicine; also a legacy of \$50,000, from the late Dr. W. J. Mickle, to found two fellowships in the Faculty of Medicine. Hart House, the gift of the Massey Foundation, comprising a Students' Union, Y. M. C. A., gymnasium, dining hall, and theatre, was opened in 1919. A legacy of \$2000 was received from the late Dr. R. A. Reeve to found a scholarship in household science, and a gift of \$2000 from Mr. T. M. Porter to found a scholarship in the University Schools. The university was founded in 1827. Presi-

dent, Sir Robert A. Falconer, K.C.M.G., M.A., LL.D., Litt.D.

TORPEDO BOAT DESTROYERS. See **NAVAL PROGRESS**.

TORPEDO BOATS. See **NAVAL PROGRESS**.

TOWER, DANIEL BRINK. American composer, died in Chicago, October 16. He was born at Rome, Pa., March 5, 1850, and began as a teacher of music at Binghamton, N. Y., in 1873, but afterwards joined Dwight L. Moody as a soloist and musical director (1884). He wrote or edited a large number of works on music including many collections of revival hymns, famous hymns, gospel songs, choruses and hymns for male voices, etc.

TRACK AND FIELD ATHLETICS. See **ATHLETICS**.

TRADE UNIONS. During the last year, the scope and influence of labor organizations, as well as their membership, have greatly increased. The recognition of the trade unions by many of the governments during the war (see **NATIONAL WAR LABOR BOARD**) gave additional impetus to the movement. Labor organization has gained prominence in this country due to the unusual number of strikes and lockouts (q.v.) in major industries, as well as through their acceptance as the representatives of labor in the President's Industrial Conference (see **ARBITRATION AND CONCILIATION**). The tendency has been largely towards the development of one large federation, the American Federation of Labor (q.v.), while in a number of countries, Great Britain, Germany, Spain, and others, there is a definite recognition of labor in politics. See also **LABOR**; and for programmes of reform, see **INDUSTRIAL RECONSTRUCTION**; for settlement of disputes, see **ARBITRATION AND CONCILIATION**.

NATIONAL LABOR PARTY. Although the American Federation of Labor has stated as its policy, a non-partisan attitude in politics, there has been an increasing demand for an active labor party. On August 18th, a conference was held in Chicago by 30 executive committeemen representing nine States having organized labor parties. As a result of this conference, on November 22d, the opening session of a Labor Congress was held in Chicago. Some 1000 delegates were present, representing State labor unions, some affiliated with the American Federation of Labor, delegates from farmers' organizations, cooperative societies, non-partisan and Plum-plan advocates, and other workers for more advanced labor and social legislation. A new labor party was formed which adopted a programme demanding free speech, free assemblage, and a free press. The convention announced its intention not to nominate a national ticket at that time, but to issue a call for a convention to be held next Spring for that purpose.

RAILROAD BROTHERHOODS. The largest labor organization in this country not affiliated with the American Federation of Labor, are the railroad brotherhoods. At the Atlantic City Convention, on June 23d, President Gompers of the American Federation of Labor, announced that application for membership had been made by the Order of Railroad Conductors, Brotherhood of Locomotive Engineers, Brotherhood of Railroad Firemen, and Brotherhood of Railroad Trainmen. The total membership of the "Big Four" is over 500,000.

INTERNATIONAL RELATIONS. The International Trade Union Conference, a by-product of

war coöperation, was attended by 41 delegates representing 11 countries, including the United States and Great Britain. It took up a discussion of labor legislation, and outlined a programme for the Peace Conference. A permanent committee and a permanent international labor office of control for protection of the working classes is anticipated, as is also an International Labor Parliament to be called once a year, insisting on a prompt and definite reestablishment of an international trade union body.

GREAT BRITAIN. British labor has more nearly reached the stage of complete organization than that in any country. In June, figures furnished by the London agent of the Bureau of Labor Statistics, reported the total trade-union membership as nearly 5,436,000 of which 890,000 are engaged in mining.

At the present time, there are two different types of labor organizations active in Great Britain. The organization known as the Trades Union Congress is based upon trade unions, very much similar to those in the United States, with each craft as a basis of organization. There is likewise, an organization having each industry as its basis. This is known as the Whitley Council, and is being introduced through all the industries, to bring about better cooperation between employer and employee. For details of this plan, see **ARBITRATION AND CONCILIATION**.

The 51st annual Trades Union Congress was held in Glasgow on the 8th of September. There were present 200 delegates, representing 5,248,330 workers, in comparison with 191 representing 4,501,022 in 1918, or an increase of 747,308 over the previous year. Every industry represented showed an increase over the previous year, the greatest being in the Chemical, gas, and general laborers, from 865,270 to 1,912,548. Some of the other industries were: Building 276,950; mining and quarrying 684,300; textiles 474,204; transport, 800,936; shop assistants and clerks, 150,065. The more important decisions of the Congress are as follows—instructing the Parliament Committee to draft a policy for the control of industry "without wage slavery"; request for a national conference with regard to the Conscription Act; rejection of government scheme for control of coal industry; offer to coöperate with Miners' Federation of Great Britain to endeavor to secure the scheme recommended by the majority of the Coal Industrial Commission; request for the repeal of the Military Service Acts, and the withdrawal of troops from Russia.

CANADA. The annual report for 1918 on labor organization in Canada, shows that trade unions have reached their highest point in the Dominion. At the close of 1918, membership totaled 248,887 composed of 2274 branch unions, a total increase for the year of 44,257 in membership and 300 in local unions. There are 96 international organizations having one or more local branches in Canada, and composing 1897 of the branch unions, a gain over 1917 of 195. International membership reported from respective headquarters was 201,432, an increase of 36,536. The total benefits paid by international organizations in Canada during 1918 were \$16,802,092, an increase of \$3,626,713 over 1917. Payments made by local branch unions aggregated \$431,504, an increase of \$118,388 over 1917. For the international unions, the totals were: Death benefits, \$12,679,934; unemployment and traveling expenses, \$91,372; strike benefits, \$1,973,

418; sick and accident benefits, \$1,294,268; old age pensions, \$763,100.

GERMANY. Just before the outbreak of the war, the German trade unions had held their ninth Congress in Munich. During the war, the convening of the labor class was impossible. The end of the war, however, was soon followed by the 10th Congress, which was held in Nuremberg from June 30th to July 5th. In point of membership, this Congress showed the trade unions to have reached the highest point in their history. In July, 1914, the membership of the Free Trade Unions was 2,512,000. It fell to 995,000 during the first half of 1917, but grew in the middle of 1918 to 1,370,000, and by the end of 1918, had a membership of 2,860,000. As a result of the revolution, in February, it reached the third million, in May the fourth, and on the occasion of the Congress, the last of June, the membership was 5,500,000. This Congress had 644 delegates. In order to create a closer tie between the individual German Free Trade Unions, a new Trade Union Federation was formed, the object of which is the constant coöperation of various unions in the protection of the interests of organized workers in Germany. A definite political neutrality was agreed upon.

ALSACE-LORRAINE. A conference was held in Strassburg on January 4th, with the end in view of regulating the relations of the Alsace-Lorraine trade unions with the French trade union's federation. After a lengthy discussion, a regulation proposed by Herr Imbs, providing for three district associations, with headquarters at Metz, Strassburg, and Muhlhausen, to embrace all the 48 existing trade union groups, was carried unanimously. These three associations form the regional association for Alsace-Lorraine, and will be joined to the French trade unions' federation as such.

SPAIN. The General Union of Workmen in Spain held its 13th annual convention in Madrid Sept. 30, 1918, with 124 delegates present, representing 82,024 workers. This union has 468 branches and 89,601 members. Although a general strike had been attempted in August, 1917, the labor organizations were not strong enough nor sufficiently equipped to carry it through. Measures urged by the convention were: establishment of minimum wage; prohibition of woman and child labor, in work disproportionate to their strength; equal pay for sexes in equal work; better education; more satisfactory accident compensation.

DENMARK. On April 25th, was held in Copenhagen a general meeting of the Danish Cooperative Trade Unions, embracing 255,000 organized laborers. There were 456 representatives present and also delegates from Germany, Sweden, and Norway. During the period 1916-1918, the number of organizations increased from 51 to 54, the number of local unions from 1315 to 2367, and the membership from 132,000 to 255,150, or a growth of 93.3 per cent.

TRAIL, JAMES WILLIAM HELENUS. Professor of botany at the University of Aberdeen after 1877, died September 18. He was born in the Orkney Islands, Mar. 4, 1851, and was educated at the University of Aberdeen. He traveled as a naturalist in Brazil 1873-75, and published many papers on botany and zoölogy.

TRANSVAAL. See **SOUTH AFRICA, UNION OF.**

TRANSYLVANIA. From 1867 to the clos-

ing months of 1918 a part of the crownlands of Hungary; political status in 1919 indeterminate pending final settlement by the Treaty. Area 22,318 square miles; population according to the census of Dec. 31, 1910, 2,678,367; distributed according to the languages spoken as follows: Rumanian, 1,472,021; Hungarian, 918,217; German, 234,085. Rumania claimed the country, alleging that despite the antiquity of the Austrian annexation it was plainly a part of Rumanian territory and she compared her claim to that of France on Alsace-Lorraine. The Transylvanians declared their independence of Hungary on Dec. 2, 1918, and on Jan. 11, 1919, Rumania by royal decree annexed the territory. See WAR OF THE NATIONS.

TRAUBEL, HORACE. American author, died at Camden, N. J., September 9. He was especially known as a friend and literary executor of Walt Whitman. He was born at Camden, N. J., Dec. 18, 1858, and educated at the public schools there. He was editor of the literary paper the *Conservator*, published in Philadelphia, and the author of the following works: *Chants Communal*, (1905); *With Walt Whitman in Camden* (a diary, vol. i, 1905; vol. ii, 1908; vol. iii, 1914); *Optimos* (poems, 1910); *Collects*, (1914).

TRIESTE. Before the disruption of the Austria-Hungarian empire a crownland of Austria, consisting of the Mediterranean port of Trieste with the surrounding region; occupied by Italy after the war. A semi-official estimate placed the population of the city itself at 190,013 in 1919. From November, 1918, to July, 1919, the first period under Italian occupation there was very little importation. See WAR OF THE NATIONS.

TRINIDAD AND TOBAGO. A British colony in the West Indies comprising the islands of Trinidad (area 1860 square miles), and Tobago (114). Total population, 333,552; estimated Dec. 31, 1917, 377,021. Capital, Port of Spain, population (60,000) for the year ending Mar. 31, 1917. The financial and commercial figures were as follows: Revenue, £1,098,183; expenditure, £1,097,696; imports, £5,308,996; public debt, £1,651,853. Governor at the beginning of 1919, Major Sir J. R. Chancellor.

In 1919 measures were taken to promote the fruit industry of the islands. It was proposed that the local industries should be organized in such a way that the planters throughout the colony would have a definite assurance that their fruit would be taken. For the purpose of export trade especial attention was called to the growing of oranges, grape fruit, and mangoes.

At the close of the year the administrative council authorized the government to declare certain articles to be in common use, and to prescribe the maximum retail price on them with a view to preventing profiteering. The penalties for the violation of this act were severe.

TRINITY COLLEGE. An institution for the education of men, at Hartford, Conn. Enrollment for the fall of 1919, was 226, with 18 members in the faculty. Volumes in the library, 90,000, with about 45,000 pamphlets. Productive funds of the college total \$1,500,000. The college was founded in 1823 as Washington College, by members of the Protestant Episcopal Church. The present name was adopted in 1845. Acting President, Henry A. Perkins.

TRIPOLI. See LIBYA.

TROPICAL STORM. See HURRICANES.

TRUMBULL, JONATHAN. Writer and librarian, died at Norwich, Conn., May 21. He was born at Norwich, Conn., Jan. 23, 1844, and was educated at the free academy there. He was prominent for many years in library work, and wrote historical works on Israel Putnam, Joseph Trumbull and *The Share of Connecticut in the Revolution*, and literary works on Shakespeare.

TRUMBITCH, ANTE. Serbian representative at the Paris Peace Conference. He was Foreign Minister of the new Jugo-Slav state, consisting of Serbs, Croats, and Slovenes. He had been a prominent lawyer in Dalmatia where he became president of the Diet, and which he represented in the Austrian Parliament. He was one of the framers of the resolution of Fiume in 1905 for the union of Croats and Serbs. He escaped from Austria just before the war, and constituted with other leaders the southern Slav committee, which chose him as president. In July, 1917, he concluded with Serbia the famous Declaration of Corfu, which led to the organization of the southern Slav state. In March, 1918, he concluded with the Italian representative the agreement between the southern Slavs and Italy, which was ratified by the congress at Rome and approved by Signor Orlando in April of that year. After the creation of the new Southern Slav state, he was appointed foreign minister.

TRUSTS. The country's gradual return to a peace basis in 1919 led to resumption of the operation of the anti-trust laws. In view of new problems created by recent industrial activities, there was also a demand for legislation which would adequately provide for conditions which did not exist when the laws were enacted. The desire for new legislation was reflected in the recommendation of the United States Chamber of Commerce on April 4th that Congress reconsider the existing anti-trust laws. This recommendation was the result of the Chamber's referendum vote of the business interests of the country as represented in trade and commercial organizations. The proposals, advanced by a special committee which had studied the subject, were voted on as follows: (1) Congress should be asked immediately to consider the present situation of all statutes constituting our anti-trust legislation—for, 1543; against, 51; (2) in consideration of existing anti-trust legislation, there should be formulation of standards of general business conduct, to be administered by a supervisory body—for, 1159; against, 389; (3) an enlarged Federal Trade Commission should be made the supervisory body—for, 1102; against, 437; (4) in view of the importance of the functions of the Trade Commission, the membership of the Federal Trade Commission should be increased to nine—for, 1104; against, 422. The need for new legislation is seen in the new type of trust which has arisen since the present laws were made. The modern trust seeks not only to overcome competitors, but also to gain control over competing or substitute commodities.

As a result of the war, government suits against several companies were postponed for that period, and reopened in 1919. Few of these suits were decided in the year.

On Dec. 9, 1918, the Supreme Court decided

that the Du Pont powder interests were not a trust, and need not pay damages asked by the Buckeye Powder Company. The latter concern charged the Du Pont firm with using unfair methods, such as price cutting, to force them out of business.

NATIONAL ASSOCIATION OF AUTOMOBILE ACCESSORY JOBBERS. Members of the National Association of Automobile Accessory Jobbers, who had been on trial before Judge Learned Hand on a charge of violating the Sherman Anti-trust Law, were found not guilty by the jury on Feb. 7, 1919. The defendants had been charged with seeking to fix prices, restrain trade and limit output. The trial was begun on January 14th. In the indictment, charges dating back to the formation of the association at the Union League Club, Chicago, on May 11, 1915, were made against certain officers and members of the National Association of Automobile Accessory Jobbers.

CORN PRODUCTS REFINING COMPANY. On March 31st, following an agreement made between the government and the Corn Products Refining Company, after the United States Supreme Court had dismissed the company's appeal from a conviction for violating the Sherman Anti-trust Law, Federal Judge Learned Hand filed a final decree requiring the dissolution of the \$80,000,000 concern by Jan. 1, 1921. The final decree makes a complete dissolution necessary, and prohibits it from separating the units and placing men under some central control in charge of them. The company was charged with being an illegal combination and with incorrigible persistence in interfering with the course of trade. The object of the decree was to restore competitive conditions, and the court reserved the right to take any action necessary to restore such conditions. All the officers of the company were made defendants in the government's suit. The decree provided that the company should not permit its assets to be diminished or used for other purposes than that for which they had been used ordinarily. The suit was begun by the government on Mar. 1, 1913. The complaint against the company stated that it controlled 60 per cent of the trade in glucose, starch, and their by-products. It was charged also that the company attempted to obtain freight rates that would make it easier to drive competitors out of business. In giving his opinion Judge Hand said that, "the conduct of the company showed an intent, the execution of which it was the purpose of the Anti-trust Act to prevent. There was no doubt of the intent to dominate the industry."

BALTIMORE FEDERAL LEAGUE CLUB. The Baltimore Federal League Club was awarded \$80,000 damages by the jury of the District Supreme Court of Washington, D. C., on April 12th. The suit brought against organized baseball charged it with being a combination in restraint of trade and thus violating the Sherman Anti-trust Act. The Baltimore Club claimed that it had incurred damage to the amount of \$300,000, and under the provisions of the Anti-Trust Law it sued for \$900,000. If final judgment is entered the damages will amount to \$240,000. Judge Stafford, before whom the case was tried, decided that the law had been violated, and so instructed the jury. He left the amount of the damages to that body. The defendants were the National League and its eight component clubs,

the American League and its separate clubs, August Herrmann, Baneroff B. Johnson, and John K. Tener.

COLGATE AND COMPANY. On June 2d the Supreme Court of the United States affirmed the decision of the United States District Court for the District of Eastern Virginia in the government's suit against Colgate and Company. The decision gives the manufacturer the right to refuse to sell to the price cutter, without incurring any criminal liability under the Sherman Law. In giving his decision, Justice McReynolds said, "In the absence of any purpose to create or maintain a monopoly, the act did not restrict the long-recognized right of a trader or manufacturer engaged in an entirely private business, freely to exercise his own independent discretion as to the parties to whom he will refuse to sell. The trader or manufacturer may announce in advance the circumstances under which he will refuse to sell."

During the past year the activities of the "Big Five" packers, Armour, Swift, Wilson, Cudahy, and Morris, were investigated by government agents. It was claimed that the "Big Five" not only controlled the meat packing industry, but also the butter and egg business, oleomargarine, the manufacture of fertilizer, the production of cottonseed oil, perfumes, and leather novelties, and that they were extending their control over the wholesale grocery business. Announcement of the government's intention to bring suit against the packers was made by Attorney-General Palmer on August 6th. The Attorney-General declared that the big meat packers were in "a conspiracy to control the table of the American citizen." The Chicago Grand Jury, which came into session in September to hear the case of the government against the "Big Five," who, it was claimed, had violated the anti-trust laws, was dismissed on October 3d, on its failure to return the anticipated indictments. A new Grand Jury was summoned to be sworn in on October 7th and to continue the case. On December 18th an agreement was reached between the Federal authorities and the "Big Five" for the filing of a decree in the anti-trust cases then pending. The settlement was far-reaching in its effects. The government agreed not to press its suit against the packers, but obtained the entry of a perpetual injunction to preclude the recurrence of certain alleged objectionable practices. The Court retained jurisdiction so that at any time action might be taken to compel compliance with any detail of the settlement. The objects of the decree were to eliminate: (1) "the alleged evil of stock-yard ownership" with its control over purchases of live stock to the exclusion of outsiders"; (2) "the alleged terminal railway evil" with the discrimination made possible thereby against the interests of independent packers"; (3) "the alleged forcing out of independents"; (4) "the alleged misuse of cold storage warehouses"; (5) "the alleged evil of controlling important substitutes for meat," such as fish, vegetables, and so forth." The decree provides that the packers and their subsidiaries must begin immediately and, within two years, complete the sale of "all their holdings in public stock yards, stock-yard railroads and terminals, and their interests in market newspapers and cold-storage warehouses, and forever disassociate themselves from the retail business and food lines unrelated to meat packing." The packers were

permitted to keep their cold-storage cars and other rolling stock on condition that their cars and warehouses be used only for handling meat and meat by-products. In their acceptance of this decree the packers asserted that they had not been guilty of violating the law, and claimed that they were actuated only by patriotic motives.

Bills placing the meat packing industry under Federal Control were introduced during the past year in the U. S. Senate by Senators Kendrick of Wyoming and Kenyon of Iowa.

TSING-TAO. See KIAO-CHOW.

TUBERCULOSIS. The problem of tuberculosis in limited communities is believed to be nearing solution and a prominent medical sanitarian has recently announced that he would be willing as a purely business proposition to assume all of the responsibilities of a contract to dispose of the disease as far as a given community is concerned. The problem as it affects the individual is of course quite another matter. The developments of the past year are in theory rather unfavorable for the potential or actual sufferer from the disease, for several reasons. One is the underfeeding which may result from the increased cost of living, which includes the diminished amount of housing space per capita due to increased rentals. Another is the damage which may have been caused by the influenza pandemic of one year ago in lowering the general resistance to disease. To offset these we have the benefit likely to accrue from prohibition, and from the steady increase in community welfare work and the activities of insurance companies and large corporations in preventing the diseases of occupation and in caring for the incipient case. Realization of the fact that people acquire immunity to the disease only by having it while young in a mild form has of course greatly stimulated the hope of securing artificial immunity. Recently the discovery has been announced by Wildbolz that if a subject is developing the disease the simple expedient of inoculating him in the thickness of the skin with his own urine in 10 fold concentration will cause a characteristic intradermic reaction which will prove an absolute diagnostic test. This reaction is free from some of the disagreeable consequences produced by the diagnostic action of tuberculin and may possibly pave the way to a simple and safe method of self-immunization such as comes about from Nature's own processes.

TUFTS COLLEGE. A non-sectarian institution, partially co-educational, at Medford, Mass. The enrollment for the fall of 1919 was 1958, with 315 members in the faculty. Productive funds amount to \$2,550,000; the endowment is \$3,630,000; the estimated income for the year is \$400,000. The library contains 75,000 volumes. Tufts was founded in 1852. President, John Albert Cousens.

TUKUSHIMA, Lieutenant-general Baron YASUMASA. Japanese official, died at Tokio, February 18. He first won renown as a traveler when on leaving Berlin, where he had been military attaché in the 1890's, he rode through Siberia, Mongolia, and Manchuria, and arrived at Vladivostok after a journey of 15 months. He commanded the Japanese expeditionary army during the Boxer troubles in 1900. He won a still higher reputation for his service during the

Japanese War with Russia when he was in the army of Marshal Oyama.

TUNGSTEN. A total of 5,041 short tons of concentrated tungsten ores, carrying 60 per cent tungsten trioxide, was produced in the United States in 1918. This was a decrease of 1101 short tons from the year before. Imports equivalent to 11,750 short tons were recorded in 1918 and exports equal to 1265 tons, giving an apparent consumption, according to the *Geological Survey* of 15,526 short tons. Colorado, California and Nevada, in the order named, were the principal producing States. China (Hongkong), Peru and Japan furnished the largest part of the tungsten imported. Imports in 1918 reached a value of \$11,409,237. Prices for tungsten ranged from \$15 at the beginning of 1918 to \$11 at the end. See **CHEMISTRY, INDUSTRIAL.**

TUNIS. A French Protectorate on the Mediterranean coast known as the Regency of Tunis lying to the east of Algeria and to the west of Tripoli. Area, estimated from 50,000 square miles to 64,600 square miles; population estimated in 1913 at about 1,953,000, of whom the majority are Bedouin Arabs, and Kabyles (1,781,000 in 1913). The French element in 1913 was only about 48,000; the Italian 112,000; there were also represented in the foreign population the Anglo-Maltese, Spaniards, Greeks, Turks, and Jews (the last-named placed at 50,383). Capital, Tunis, with a population of 278,063 of whom 164,668 were Moslems. The country derives its wealth from agriculture and mining but of late years the international trade has greatly developed under French direction. The chief products are flour and cereals, olives, grapes, dates and other fruits. In 1919 the harvests of wheat and barley were reported as likely to be insufficient for the needs of the ensuing year. Next to the cereal crops the olive oil and wine are the most important products. The raising of live-stock is also important. Cattle of superior quality are raised in the north and sheep and goats in the southern and central regions. The sheep are especially valuable as the wool is highly prized for the manufacture of native textiles. In 1919 the entire wool clip was taken over for that purpose. Among the profitable by-products may be mentioned camel's hair and goat's hair, which have been exported in increasing quantities to France. The mining industry includes the production of phosphates, iron ore, lead, zinc, manganese, lignite, and other minerals. Industry was injured during the war chiefly owing to the scarcity of labor and the lack of shipping facilities. There was a serious falling off in the phosphate supply in 1918, when it was especially needed to stimulate agricultural production in Europe. Other mineral products also fell off as a result of the war; but the lignite beds in the north were exploited more largely than ever before (70,000 tons in 1918, compared with 32,000 in 1917). The forest lands controlled by the state are for the most part in the northern and central regions and comprise cork, pines, juniper, wild olive, cedar, and carab. The cork oaks cover a wide area and produce a considerable quantity. Manufacturing industries are undeveloped although the resources for them are extensive. The manufacturing industries include saddlery, shoe making, textile weaving, the manufacturing of perfumes, silk and cotton manufactures, and dyeing. They suffered

during the war for the lack of transport. There was a scarcity of agricultural labor throughout 1918 and those who were engaged received much higher wages than before. The formation of trade unions continued among the industrial and commercial classes, the native employees having organized for the protection of their interests, but no immediate labor conflicts were reported. The unions in 1918 had not as yet demanded the eight-hour day. The government concerned itself with the living conditions of the wage earners, adopting various measures in regard to exports and imports of necessities with a view to supplying the needs of the people at reasonable prices. The general cost of living, however, did not diminish and the question of housing was serious.

No later figures for shipping are available than for 1917, when the total tonnage of merchandise cleared amounted to 1,433,613. The railway system in 1918 comprised 2042 kilometers of which three-fourths were in the hands of the Bona-Gullma company.

The above information is based upon the report of the United States Bureau of Foreign and Domestic Commerce, published at the close of the year. The same source supplies the following figures for the budget estimates of 1918.

The government's estimate of its receipts from ordinary sources in 1918, as submitted by the budget commission, may be summarized as follows:

	Francs
Direct imposts	12,910,500
Indirect imposts and revenues	23,754,500
Proceeds of State monopolies and industrial exploitation	24,670,900
Proceeds and revenues of the State's domain	4,102,400
Sundry receipts	4,457,260
Total	69,895,560

The ordinary expenditures for 1918 were estimated as follows:

	Francs
Department of Finance	37,561,088
Postal and telegraph service	3,982,880
General administration	7,776,263
Department of Agriculture, Commerce, and Colonization	1,898,755
Department of Instruction	4,587,960
Tunisian Army	608,667
Department of Public Works	12,419,149
Unforeseen expenses	1,060,000
Total	69,894,762

COMMERCE. The following information in regard to the foreign trade of Tunis in 1918 was supplied by the United States Bureau of Foreign and Domestic Commerce at the close of the year 1919.

In spite of adverse conditions, due to the war, the whole volume of the foreign trade of Tunis amounted during 1918, according to the latest statistics available, to 336,990,794 francs, of which 207,442,588 francs represents the value of imports and 129,548,206 francs the value of exports, as compared with aggregates of 267,713,764 francs and 322,918,283 francs, respectively, for the years 1917 and 1913. During 1913 imports were valued at 144,254,678 francs and exports at 178,663,605 francs; in 1917, at 142,041,685 francs and 125,672,079 francs, respec-

tively. France was the best customer of Tunis in 1918, taking merchandise valued at 82,253,461 francs, or 63 per cent of the Regency's total exports; and selling this country goods to the value of 63,958,456 francs. From Great Britain Tunis imported 60,894,286 francs worth of goods, and from the United States, third in order, 16,104,517 francs worth, exclusive of Philippine leaf tobacco valued at 600,000 francs. China, Italy, and Algeria come next in order as sources of supplies for Tunis, each selling this country between 11,000,000 and 12,000,000 francs' worth of goods. England, Italy, Algeria, Tripoli, Egypt, Spain, and Malta, in the order mentioned, were, after France, the most important purchasers of Tunisian products in 1918. The changes during the past decade in the foreign trade of the Regency are illustrated in the following table which shows, respectively, the leading sources of supplies of Tunis and the principal markets for its products, in percentages representing the proportionate share of each country in the Regency's annual foreign trade:

Years	Imports				Other countries
	France	Great Britain	Italy	Algeria	
1909	60 63	8 19	4 73	8 18	18 27
1910	56 17	10 44	5 57	11 72	16 10
1911	56 94	10 75	5 12	9 87	17 32
1912	51 36	9 31	5 74	11 41	22 18
1913	52 84	9 98	6 32	9 75	21 11
1914	44 31	8 12	7 16	13 63	26 78
1915	44 69	15 15	12 39	12 75	15 02
1916	40 85	21 93	10 53	8 60	18 09
1917	38 21	23 06	9 07	8 62	21 04
1918	30 83	29 35	5 71	5 62	28 49

Years	Exports			
	France	Great Britain	Italy	Algeria
1909	46 05	15 36	17 17	4 29
1910	49 32	8 95	18 26	5 26
1911	51 22	14 18	12 08	4 16
1912	43 82	8 80	16 33	5 00
1913	40 92	8 73	14 45	4 65
1914	31 58	12 29	24 36	4 35
1915	49 54	14 60	18 00	2 52
1916	43 77	17 96	13 42	4 19
1917	64 25	11 93	7 09	5 90
1918	63 49	15 11	8 21	6 09

The development of trade with the United States during the past 10 years is shown by the following table of imports from and exports to that country, compiled from Tunisian official statistics:

Years	Imports Francs	Exports Francs
1909	2,350,121	261,980
1910	1,878,719	222,670
1911	2,620,069	116,798
1912	6,592,692	27,020
1913	7,117,039	278,775
1914	8,927,725	680,551
1915	3,493,211	180,181
1916	8,168,961	1,271,207
1917	7,116,434	148,682
1918	16,104,517	26,000

GOVERNMENT. The French established control over Tunis in 1881. The country is now under the direction of the French foreign office and administered through a French resident-general. The local ruling family received annuities from the French revenues. In 1914 the penal law was codified. The Bey at the beginning of 1919 was Sidi Mohamed, and the French resident-general was M. Etienne Flaudin (appointed, 1918).

TUNNELS. There were few notable tunnels under construction either for railway or rapid transit or for aqueduct purposes though a number of interesting projects were under discussion. Most notable perhaps was the vehicular tunnel at New York, though the Channel Tunnel from England to France and the tunnel to be built by Japan under the straits of Shimonoseki were actively discussed. At the Catskill Aqueduct (see **AQUEDUCTS**), the Shandakan tunnel was begun. Lack of new railway construction and improvement of course was responsible for inactivity in this field the world over and subway construction (see **RAPID TRANSIT**) was also restricted for similar reasons. Some of the more notable tunnel projects of 1919 are discussed in the following paragraphs.

HUDSON RIVER TUNNEL. Following legislative appropriations made in the spring of 1919, the States of New Jersey and New York in September entered into a formal agreement through their Inter-State Bridge and Tunnel Commissions to build and operate the vehicle tunnel under the Hudson River between Manhattan Island and Jersey City, which had been under discussion for several years previously. Authority already had been granted by Congress for the States of New York and New Jersey to agree together in the matter of the construction of the Hudson River Tunnel, as this permission was required under the Federal Constitution. The appropriation acts gave authority to the commissions to contract with each other for this purpose, and the details of the agreement were under discussion during the intervening time. The contract entered into protects either State in case of default by the other, there being no obligation to make further appropriations, and in the event of any default the other side may complete construction and collect tolls at both portals until the cost in default is paid. Taxes of either State must be collected from the toll income taken on its own side. The plan was to fix such tolls as would repay principal and interest within 20 years.

On July 1, 1919, the Engineering Department of the joint commissions was organized with Clifford M. Holland as chief engineer. Mr. Holland had had 13 years' experience in the planning and construction of tunnels under the East River and immediately proceeded to the preparation of preliminary plans and estimates for the consideration of the Board of Consulting Engineers, composed of Messrs. William J. Wilgus, John A. Benschel, William H. Burr, Edward A. Byrne, J. Vipond Davies and Henry W. Hodge. The geological conditions along the route of the tunnel and its approaches were studied during the year in view of an extensive series of borings, and studies were also instituted in regard to the ventilation of the tunnel, considering especially the exhaust gases of the motor vehicles.

It was estimated at the end of the year that the proposed tunnel would cost \$28,669,000 and would require three and a half years to build. Both the cost and the time were estimated on a minimum basis. When the tunnel was first discussed the cost was estimated at \$12,000,000 independent of approaches, but material and labor cost had risen in the interval at an extraordinary rate.

According to the preliminary plans prepared the interstate tunnel was to lie an average of 60 feet beneath the surface of the river at low

tide, which is 10 feet deeper than the requirements of the War Department. The tunnel was to be 5400 feet long between shafts placed just inside of the pierhead lines. Part of the work was to comprise the building of modern piers to be constructed so as to protect the tubes from damage.

On the New York side the tunnel was to emerge at Canal Street. There were to be two plazas, one at Broome Street leading into a roadway connecting with the tunnel's mouth at Broome Street and forming the entrance. This will be the entrance. The exit was to be to a plaza on Vestry Street. Both exit and entrance will be approximately 1800 feet east of the river's edge. On the New Jersey side both the exit and entrance were to be located in the neighborhood of Twelfth and Provost Streets, Jersey City, almost in the centre of the area now occupied by the yards of the Delaware, Lackawanna & Western, the Pennsylvania and the Erie Railroads.

The type of tunnel recommended in the plans under preparation was a pair of twin cast-iron tubes with an external diameter of 29 feet, to accommodate two lines of traffic in each direction with a 20-foot roadway.

One tube approach would be located under Canal Street and the other under Spring Street, coming together at the waterfront, the tubes crossing the river together and dividing in Jersey City, so that one would go up Twelfth Street and the other Fourteenth Street.

The maximum adverse grade for westbound traffic is 3.5 per cent and for eastbound traffic 3.52 per cent, grades which compare with those used over the East River bridges. These adverse grades are comparatively short, extending only from the tunnel portal to the points where the tunnel roadway meets the street grade.

The clear headroom of the tunnel in these plans was fixed at 13 feet 6 inches and the width of roadway for two lines of traffic, allowing clearances for safe and convenient operation, was fixed at 20 feet, which corresponds very closely to the width of the roadways over the Williamsburg Bridge across the East River, New York City. These plans were to be formally presented and discussed early in 1920, so that construction could be undertaken speedily.

The New York commission consisted of General George R. Dyer, chairman; E. W. Bloomingtondale, vice chairman; McDougall Hawkes, A. J. Shamberg, Grover A. Whalen, Frank M. Williams; Counsel Paul Windels and Secretary Morris M. Frohlich.

The New Jersey commission consisted of Weller H. Noyes, chairman; Samuel T. French, vice chairman; Thomas J. S. Barlow, Theodore Boettger, T. A. Adams, Palmer Campbell, Richard T. Collings, Daniel F. Hendrickson; Counsel Emerson Richards and Secretary Charles R. Bacon and Assistant Secretary E. Morgan Barradale.

PROPOSED COLORADO STATE RAILWAY TUNNELS. The construction of three long tunnels in Colorado to reduce present open-pass summit elevations of railways crossing the mountains was advocated by the State Railroad Commission in a report to Governor Shoup, and the State was urged to finance the undertaking as any private interest in such a plan in the near future was inconceivable. The three tunnels proposed were as follows: On the Denver & Salt Lake R. R. near James Peak, 6.4 miles long, at an elevation of 9100 feet; near Marshall Pass, 6 miles long,

elevation 9500 feet; and a shorter tunnel near the Cumbres Pass. By such construction the present maximum grades of 3 per cent to 4 per cent could be reduced to 2 per cent.

In view of the time required in construction, the Commission recommended that work should be begun at once and prosecuted vigorously and without interruption, bonds being issued to provide for the construction of these tunnels. In order to do this it was proposed that an amendment to the State constitution to provide for such a bond issue should be submitted to the voters at the next election.

PITTSBURGH TUNNEL. In December, 1919, a contract for building the South Hills tunnel at Pittsburgh for Allegheny County was awarded. This work involved the driving and lining of two parallel 25-foot tunnels 35 feet apart, 5700 feet long, through shale rock, and two and one-half years' time is allowed for completion. The contract was awarded, as there was no indication that costs of labor and materials would be less for some time.

CHANNEL TUNNEL. A favorable report was rendered during the year by the Commission which was appointed by M. Claveille, the Minister of Public Works in France, to study the questions involved in the building of the Channel Tunnel. M. Claveille then authorized the French Submarine Railway Association which had obtained the contract for building the tunnel, to begin at once to make studies and experiments of the technical processes involved in carrying out the project. The Minister of Foreign Affairs is to consult also with the British government with a view to appointing a Franco-British Commission to conclude the necessary agreement for the tunnel. Late in the year Prime Minister Lloyd George in England made the important announcement that the British Cabinet had decided that there was no longer any political objection to the construction of the Channel Tunnel. He would not say that the military objection had also been removed, but the cabinet had asked for the considered views of the Admiralty, War Office and Air Force Staff, and after their reports had been received, they would reach a final decision of the matter.

SHIMONOSEKI STRAITS TUNNEL. One of the most interesting tunnel projects discussed in 1919 was announced by the Imperial Government Railways of Japan and involved building a tunnel under the Shimonoseki Strait. A general study of the geological formation of the sea bed in the strait and the drafting of the general plan of work in preparation for the actual undertaking of tunneling, was to require some two years, so that the real work of construction would not commence until 1921. The preliminary plans involved the sending of engineers and workmen to America and Europe to make a study of what has been achieved in these countries in the way of tunnel engineering. The line was to be seven miles long, one mile of which would be entirely under the sea. The approximate cost of the undertaking was estimated at about \$10,000,000, and the work was expected to be completed in 1928. See **AQUE-DUCTS; RAPID TRANSIT.**

TURKESTAN. A division of Russia, comprising the provinces of Samarkand, Ferghana, Syr-Darya, and Semirychensk with a total population (Jan. 1, 1915), of 6,684,400 and a total area of 420,807 square miles. At the beginning

of 1918 Russian Turkestan was reported to have declared itself a republic. On Nov. 21, 1919, according to dispatches published at that time, the Bolsheviks were strong in the towns, and controlled the railway to Merv and the Caspian Sea, but were not strong throughout the country as a whole. Train robberies by Bolsheviks were reported on the Trans-Caspian railway, and the Reds were said to be drafting Turcomans and other Moslems by force. These events followed a period of vigorous propaganda, in which Kazim Bey, a Turk, who had accompanied the German Mission to Afghanistan in 1913 was said to have been especially active. He sought to win over Bokhara to a plan of drawing Persia into a Pan-Islam democratic union, but was driven out of the country. He thereupon threatened to use force against the Emir, who, it was said tore up a part of the railway in the neighborhood of his capital, as a measure of defense. Bolshevik activities were reported elsewhere in the Trans-Caspian district, and they were said to be threatening the route to Krasnovodsk on the Trans-Caspian railway near the sea. In Khiva, as well as in Bokhara, the people were said to be hostile to the Bolshevik doctrines.

TURKEY or the OTTOMAN EMPIRE. A country of Asia Minor bordering the eastern shore of the Mediterranean; its limits and political status were indeterminate during the year, being one of the subjects for adjustment at the Peace Conference.

AREA, POPULATION, ETC. Turkey in Europe after the Balkan wars had an area of 10,882 square miles and a population of 1,891,000. Turkey in Asia comprised Anatolia, Arabia, Syria, Palestine, Mesopotamia, and Kurdistan and certain islands of the Mediterranean. After 1913 the Turkish territory was diminished. Turkey in Europe was for the most part divided between the States of Bulgaria, Serbia, Greece and Montenegro and most of the remainder was formed into the independent State of Albania. Mesopotamia in 1919 was under British administration, and Syria and Palestine under British and French. In 1918-19 the Aegean islands passed into the possession of Greece and Italy and their final destination was the subject of consideration at the Peace Conference. The overlordship possessed by the Sultan over Cyprus and Egypt had come to an end during the war, the former being annexed to the British Empire (November, 1914), and the latter being declared a British protectorate (January, 1915). At the beginning of 1919 the total area was estimated at about 613,724 square miles and the total population at about 20,973,900. The population of the chief towns was estimated as follows: Constantinople, 1,000,000; Smyrna, 375,000; Damascus, 250,000; Aleppo, 250,000; Bagdad, 225,000. Smyrna in 1919 was occupied by the Greeks. Bagdad had been occupied by the British since Mar. 11, 1917. No later figures for education and production are available than those given in the preceding YEAR BOOK.

COMMERCE. The trade of Turkey in 1916-17 was as follows: Imports, £T22,105,304; exports, £T34,058,581. As Turkey was under the dominion of Germany at that time by far the largest portion of her exports went to Germany and she received a greater quantity of imports from Germany and Austria-Hungary than from any

other country. Before the war England headed the list of importing countries. Conditions during the year 1919 were abnormal and marked by high prices, large production and speculation. In December the Turkish pound fell from 1.20 to 1.03 owing to the gold exports in payment of material received from the United States. At that time nearly one-half of the trade of Constantinople was with Russia and the rest with the Balkan States and with other parts of Turkey. The chief imports were as follows: Cotton, wool, linen, and silk textiles of every description; hosiery, boots and shoes, ready-made clothing, leather and leather goods, tinned goods of all kinds, sugar, flour, butter, margarine, and fats of all kinds, cocoa, chocolate, biscuits, tea, confectionery, cottonseed oil, mineral oils, and drugs; machinery of all kinds, including agricultural implements and machines, and mining tools and machinery, sewing machines, typewriters, automobiles, bicycles, and carriages, iron and steel rails, and iron, brass, and tin sheets, nails of all kinds, wire, iron tubing, cutlery, and general hardware, glassware and earthenware; coal and coke, heating, gas and electric appliances, portable constructions and houses, materials for construction of all kinds, timber, furniture, paper, cardboard, and stationery, rubber goods, including overshoes and raincoats, and candles, lamps, etc.

Among the chief items of export from Constantinople and the Near East were the following: Leaf tobacco; wool and mohair; rugs and carpets; flaxseed, olive oil, castor beans, and nuts, including walnuts; hides and skins; currants, sultana raisins, dried figs, and other dried fruit; opium; salt, and various other minerals.

RAILWAYS. On Nov. 1, 1914, the railway mileage of European and Asiatic Turkey exclusive of the new extension of Bagdad railway was for European Turkey 1046 and for Asiatic Turkey 2865. See **BAGDAD RAILWAY**.

FINANCE. The following table and list of the chief items of expenditures is taken from the *Statesman's Year Book* of 1919:

	1914-15 £ T	1915-16 £ T	1916-17 £ T	1917-18 £ T	1918-19 £ T
Revenue	31,921,163	26,836,438	25,612,572	23,584,165	33,965,698
Expenditure	34,007,619	35,657,545	39,724,720	53,304,511	51,762,761

The main items of expenditure in the budget for 1918-19 were: Finances, £T10,395,120; post-office, £T1,188,981; police, £T2,564,757; justice, £T1,068,141; education, £T1,072,537; commerce, £T1,582,891; army, £T6,044,101; navy, £T1,704,057. According to the report of Sir Adam Block early in 1919 the figures for the Turkish debt stood as follows:

	1914-15 £ T	1915-16 £ T	1916-17 £ T
Gross receipts	3,627,913	2,868,156	3,632,692
Expenditure	739,825	849,473	877,246
Net receipts	2,888,088	2,018,683	2,755,446
Surplus after service of unified debt . . .	730,713	138,692 (Deficit)	598,071

ARMY. Official figures giving the losses of the Turkish army during the war were published in February. The number of dead, wounded prisoners, and missing was placed at nearly 1,000,000, that is to say, 948,477, distributed as follows: Killed or dead from wounds or dis-

ease, 436,974; wounded, 407,772; prisoners and missing, 103,731.

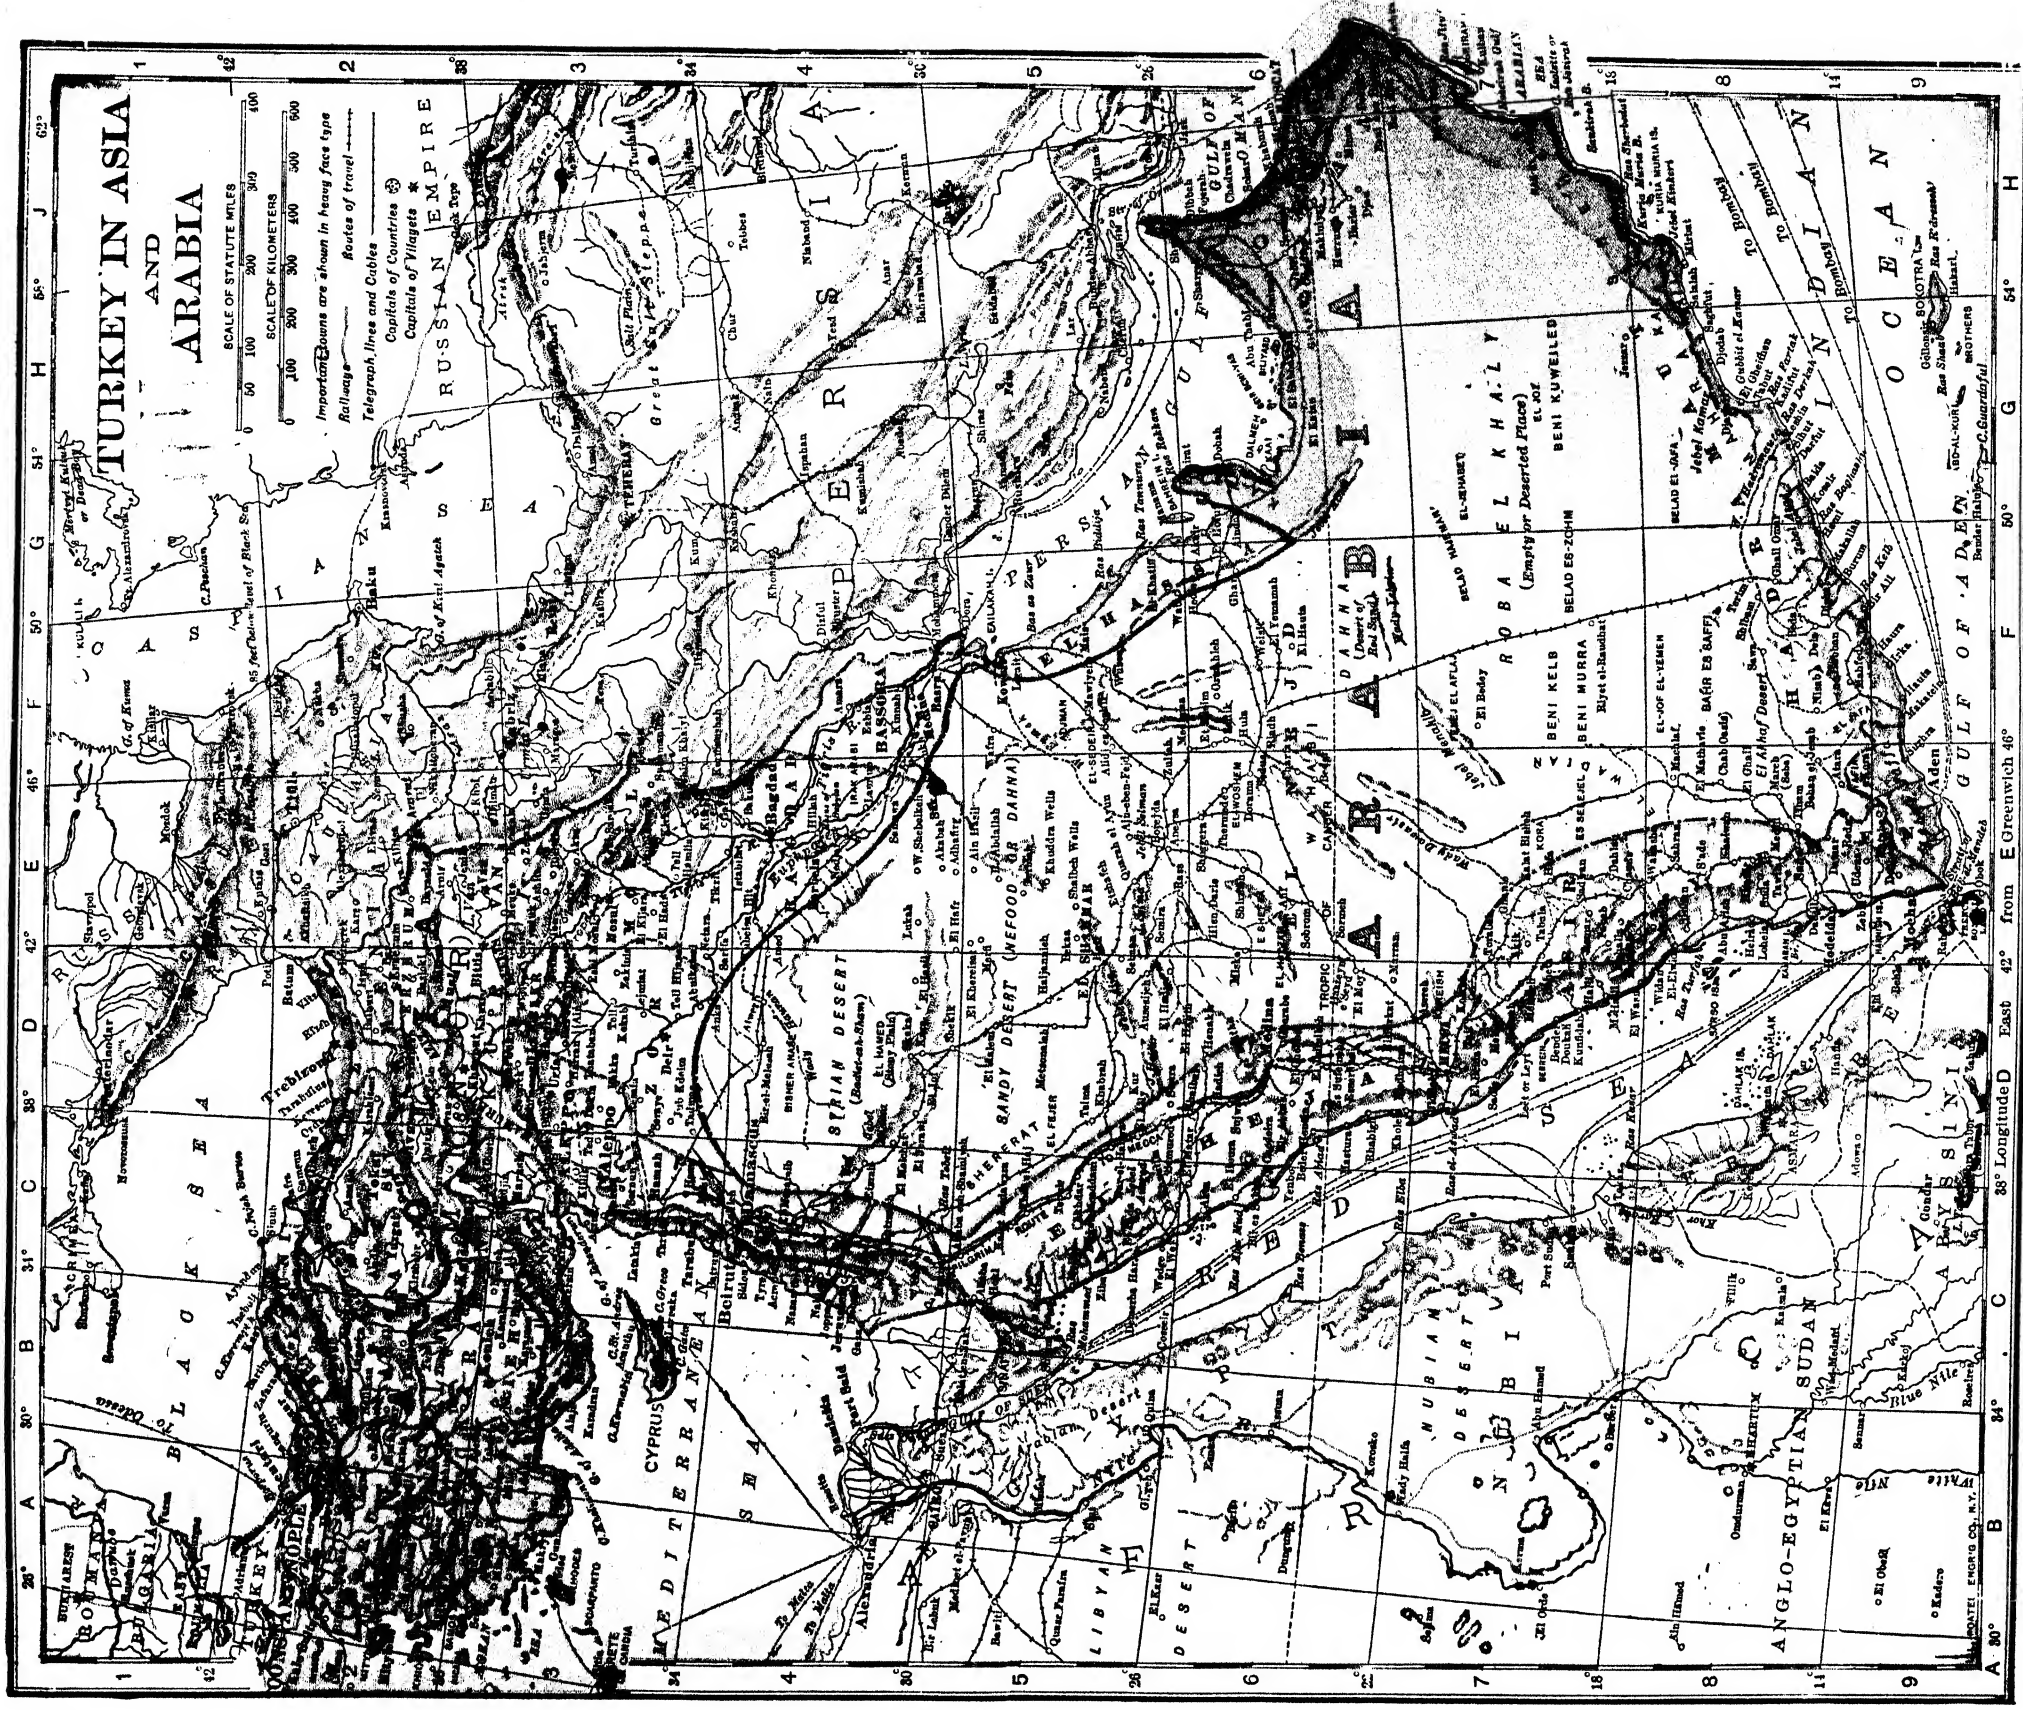

GOVERNMENT. Sultan, Mohammed VI (born Jan. 12, 1861), succeeded to the throne July 3, 1918. Ministry as constituted in May, 1919: Grand Vizier and Minister of Foreign Affairs, Damad Ferid Pasha; Interior, Ali Kemal Pasha; Justice and Finance, Vassi Pasha; War, General Shevket Torgut; Marine, Avni Pasha; Public Instruction, Handi Pasha; Sheikh-ul-Islam, and Minister of Pious Foundations, Mustapha Sabri Effendi.

HISTORY

QUESTION OF CONTROL. Upon the opening of the Peace Conference the following terms were proposed by the president of the French Republic for the settlement with Turkey: Restitution and reparation to populations and individuals; re-arrangement of the map of Turkey in conformity to the will of the peoples inhabiting it; punishment of the guilty. There was much discussion during the year of the means of execution. In France and England various schemes for the distribution of responsibility were proposed. Many favored a plan that would make England sponsor for the Arabs, France for Syria, Greece for Smyrna, the United States for Armenia, and the League of Nations for Constantinople and the rest of the Turkish empire. It was pointed out that Greeks, Armenians, and Arabs ought not to be put back under the Turkish domination. Events following the armistice it was argued, had shown that the Turkish government was as unfit as ever to govern others or even to govern the Turks, having learned nothing from its defeat. The Allies had found it necessary to take control of the main branches of the administration at Constantinople and to invite the Greek army to occupy Smyrna and its environs. The terms of the secret treaty concluded early in the war between France and Great Britain and concerning Asia Minor were made public in January. By these France was to control Syria, Lebanon and

a portion of Armenia lying west of the Euphrates known as Armenia Minor; Great Britain was to direct Mesopotamia and portions of the Arabian peninsula; and Palestine was to be under international protection. (See **WAR OF THE NATIONS**.) At the close of February dispatches indicated an understanding between the Moscow government and certain elements in Turkey, where among the members of the Union and Progress party Bolsheviks had made some converts. It was reported that the Enver Pasha was approaching at the head of a Bolshevik army. Disaffection was indicated among certain extreme Nationalists and Moslems.

CHANGE OF MINISTRY. Late in December, 1918, the Young Turks through their committee of Union and Progress tried to regain the power but the Sultan dissolved parliament, and the liberals succeeded in securing control. A new liberal ministry was formed under Prince Sahaheddin. There was another dissolution of parliament early in March. A new cabinet succeeded under Damad Ferid Pasha, Grand Vizier

and foreign minister (as noted above), and the Young Turk officials who were still in office were dismissed. A delegation headed by the Grand Vizier was now dispatched to the Peace Conference but the Allies refused to deal with it, saying they would deal later with Turkish affairs.

NATIONALIST MOVEMENT. The reports in the newspapers of conditions in Turkey during the war were confused and difficult to understand. There was evidence of a national movement extremely hostile to the government in Anatolia. It was said in the first place that the government had started the movement in order to protect the interests of Turkey, but it had got out of hand and fallen under the control of elements hostile to Constantinople. Upon the appointment of the Ferid ministry the Sultan issued a proclamation against the rebels, and placed himself squarely behind the ministry, which was unpopular on account of its insistence on remaining in power. In the region around Constantinople English troops were in occupation and the restoration of order was not difficult, but beyond the range of the railways which might be occupied by the troops of the Allies it was more difficult. The Grand Vizier Damad Ferid told the press that he was sure that the Anatolian movement would subside at once if the Peace Conference would recall to Paris the Ottoman delegation. This seemed doubtful because according to general opinion the Damad Ferid cabinet, after the failure at Paris and the Greek occupation of Smyrna, was powerless to defend the interests of the country against foreigners. It was reported at the end of October that serious disorders were taking place in several parts of the country, for example, in the neighborhood of Broussa where brigandage was a matter of daily occurrence and where conflicts between the bandits and the authorities were regularly taking place. It happened not infrequently that the police themselves went over to the bandits. Something of a Bolshevik spirit was said to be at the bottom of this brigandage. In Turkish Thrace also there were signs of revolt, and the religious authorities, both Greek Orthodox and Roman Catholic urged that the Allies should send troops into the region. The religious authorities at Tchataldja reported a number of atrocities, and bands of Turks armed with modern weapons were said to be firing upon the Christian houses at Malgara. At Constantinople there was much discussion and recrimination. There was talk of secret funds applied to the enrichment of the Young Turks, and of millions bestowed upon Talaat, Djemal, Enver and their allies. The former minister of the interior, Mohammed Ali Bey was accused of corruption, but on returning from Switzerland he explained the expenditure of the funds entrusted to him as in the interests of Turkish propaganda there. The deportation and massacre of Christians during the war was unceasingly discussed.

TURKEY AND THE POWERS. According to the Treaty with Germany the latter Power agreed to recognize and accept all arrangements which the allied and associated Powers should make with Turkey and in the article 22 of the Covenant of the League of Nations it was declared that certain communities formerly belonging to the Turkish Empire had reached the stage of development where their independence would be

recognized provisionally subject to advice and assistance by the mandatory power until they were able to stand alone. It was further said that the wishes of these communities must be the chief consideration in the choice of the mandatory. Travelers and students of the Eastern Question have criticized severely the policy of the Allies toward Turkey. One of the blunders of the Peace Conference they said was the failure to understand the Turks' point of view. The Powers had gone on with their policy of practically dismembering the Turkish empire without considering what the Turks themselves would do. When they found that the Turks were themselves a part of the problem they were at a loss as to what course to pursue. The conference between M. Clemenceau and Mr. Lloyd George at the close of the year took up matters which in the opinion of the critics should have been considered many months before. There had been a repeated demand that the United States should take part in the Near Eastern settlement by acting as mandatory for Armenia but there had been nothing in the policy pursued by England and France to encourage the United States to enter upon such a task. Both Powers had apparently blundered. England despite the principles of President Wilson was virtually occupying the territory of Arabia, Mesopotamia and Syria. The French were more or less in control of a small part of Syria. In respect to Syria the views of the two Powers were in conflict as is noted elsewhere. (See *WAR OF THE NATIONS*.) It was also stated by observers that Syria almost universally preferred English to French control. As to Cilicia the only question was whether it should be French or should be given to a free Armenia. In the secret understanding between Great Britain, France, and Italy, Southern Anatolia was to be given to Italy, exclusive of a certain portion which was to be given to Great Britain and France. At the close of the year, Italian troops were occupying the country as far north as Konieh; the western coast of Asia Minor was in the hands of the Greeks, and Armenia was demanding independence, and to this all the Powers had agreed in principle. Under these conditions the last hope of the Turks had disappeared, but there were signs that they would not submit to the complete dismemberment of the empire without making a desperate resistance. At the close of the year it was reported that the Turks were engaged in a formidable national movement in which they would be aided by their Turanian neighbors and others, including Kurds, Persians, Tartars, Tcherkessians, Afghans, Georgians and perhaps the Russian Bolsheviks. The new cabinet at Constantinople was friendly to the Young Turk movement whose leaders were Talaat, Enver and Djemal, all of whom were abroad seeking to form alliances—Djemal in Berlin, Talaat reported to be on his way to Moscow and Enver reported to be in the Caucasus stirring up the Tatars. Bolshevik agitators were reported to have been stirring up Afghanistan against England and there were rumors of disorder in Persia. In short it was predicted at the close of the year that Bolshevism would extend over all this region and that the Turkish alliance would be strengthened greatly by the influence of European Bolsheviks. This at least was what the Turks were

hoping for. In April, 1918, an organ of the Young Turk party had declared that it was their policy to penetrate Egypt, and Central Asia in order to open a road to Afghanistan and India and other Moslem countries. This would unite some 300,000,000 believers against the infidels. The belief in the Bolshevik adventure in the east was strong in certain quarters where the words of Trotsky implying a threat of eastern conquest were taken seriously. As an illustration of the extremes to which these views went, the following passage from an interview with Dr. W. D. P. Bliss, who had for many years been studying the problems of the Near East is of interest:

"There is a direct rail connection from Berlin through central Asia to Samarkand, and even beyond to Andijan, on the borders of China. All central Asia is Turanian. One may ride from the Bosphorus almost to Peking and talk some dialect of Turkish, or akin to Turkish, practically all the way. And Central Asia can supply Germany. In recent years Turkestan has been largely covered with cotton plantations. The grain and corn of Ukraina and central Asia could feed all eastern Europe and western Asia. The sheep in central Asia are said to number 200 per inhabitant. The Asiatic steppes are swarming with cattle. In the Caucasus, Ural, and Altai Mountains, and other regions, are coal, iron, copper, and other minerals, while the oil fields of Baku and elsewhere are well known. All of this is counted on by the clever Bolsheviks and the Young Turks. They at least know what they are doing."

The remedy proposed by the above writer as well as others in the press was that the Allies should give the Turks a fair chance in Western Asia Minor and that the United States should recognize an Armenian republic reaching across Eastern Asia Minor and give it the necessary aid. It was argued that the Armenians were strong enough to hold their own. In 1914 they had refused an offer of independence in return for the support of Turkey and the Central Powers. This refusal led to massacres and deportations. The Turks believed that this policy was a military necessity and that if they did not deport the Armenians the Armenians would attack them, perhaps with success. The Armenians were actually successful against the Turks in the Caucasus and this success was decisive. The German general commanding in Syria attributed the reverse in Palestine to the fact that the Turks, contrary to his orders, had insisted upon sending troops to fight the Armenians in the Caucasus. The Turkish commanders in the Caucasus said that if it had not been for Armenia the Turks would have conquered the Caucasus. It was argued that an Armenian army could maintain itself with comparatively little support from the Allies.

CABINET CRISIS. The prestige of the Damad Ferid ministry had been waning for some time past and its fall became certain after the Ottoman delegation to the Peace Conference returned to Constantinople, having failed to obtain satisfactory conditions from the Allies. Meanwhile members of the old committee of Union and Progress, who were figuring as Nationalists, had gathered together some remnants of the former army and claiming the mastery of Anatolia independently of the government of Constantinople. In the first week in October the cabinet was overthrown. At that time the whole of Asia Minor, according to the press, had practically thrown off the rule of Constantinople. The Nationalist forces under Mustapha Kemal, numbering according to some accounts 300,000 men, had captured Konieh and

their leaders set up a new government at Erzerum and called for a new national election which was to take place independently of the control of the Entente. Kemal sent an ultimatum to the government calling upon the ministry of Damad Ferid to resign. On October 6th it was announced that a new cabinet had been formed as follows: Grand Vizier, General Ali Riza Pasha; Minister of Foreign Affairs, Mustapha Rechid Pasha; Minister of War, Djemal Pasha; Minister of the Interior, Damad Sherif Pasha; Minister of Justice, Mustapha Bey; Minister of Public Works, Hamed Avouk Pasha; Minister of Agriculture, Hadi Pasha; Minister of Instruction, Said Bey. The Sultan declared that the programme of the new cabinet included the holding of elections, and the calling of parliament. It was believed that this meant the triumph of the Nationalist principles and that the government would take its stand on the maintenance of the Turkish empire. At this time the policy of the Allies which had produced this result was sharply criticized in the French press, where it was pointed out that ever since the armistice on Oct. 30, 1918, the Allies had steadily blundered. For example, British military and civil agents for a long time had possessed an influence completely overshadowing that of the French, and they bore the largest part of the responsibility. Instead of preparing an international control, they tried to secure themselves in privileged positions, and embarrassed the future action of the Allies. When the commissioners of other Powers were consulted the situation was already hopeless, and the first effect of the victory was lost. The Turks perceived once more that in the face of divided enemies they might hope anew for success. It would have been possible at the beginning of 1919, said the critics, to organize an effective system, but now it was too late. They proposed that the Allied Powers should henceforth follow a policy based on these principles: First, that the Turks are absolutely incapable of governing either themselves or other people, except by violent methods; second, that the true interest of all the Christian Powers was to come to an understanding with one another for the establishment of the collective control; third, that such a control was in the interest of the Turks themselves and of their friends. If the Christian Powers continued at their old game of intrigue, they would end by being the laughing-stock of the Turks, and Turkey would pass through a long period of confusion which would trouble the whole of Europe.

In the latter part of November Mustapha Kemal Pasha made the following proclamation in the name of the committee for the defense of the rights of Anatolia and Rumelia:

"The Entente Powers will pursue their project of depriving our nation of the fairest portion of its country. They are working to balance their interests by partitioning our country. The massacres and atrocities committed in the Aidin vilayet, which Greece was allowed to occupy in order to pave the way to a partition of Turkey, were identical with those now committed in the Adana vilayet occupied by the French, using the Armenians as their instrument. We protest with all our energy against the illegal acts committed up to the present by the Entente Powers and we hope that they will learn to cherish juster sentiments toward our nation. The result which will be brought about by the inhuman methods embarked upon by those Powers without consenting to listen to the legitimate voice of our nation may be very fatal. It would not be fatal only to a few countries, but possibly also to two worlds."

SITUATION AT THE END OF THE YEAR. The Nationalists were reported to be very desirous that the United States should assume the mandate for all of Turkey. At that time the Greeks were in occupation of Smyrna and the French of Syria. It was reported on December 12th that Enver Pasha had made himself dictator of Kurdistan but this report was not confirmed. The settlement of the Turkish question was one of the subjects under discussion in December in the conference between Mr. Lloyd George and Mr. Clemenceau. It was reported that the two governments were not in accord in respect to the city of Constantinople, the British wishing to take it completely out of the hands of the Turks, and the French wishing to leave it in their hands under the control of the Allies.

TURNER, CHARLES YARDLEY. Mural painter, died at Baltimore, Md., January 1. He was born at Baltimore, Nov. 25, 1850, and studied at the Art School of the Maryland Institute, and at the National Academy of Design. He was one of the founders and became the President of the Art Students' League in New York of which he was professor of drawing and painting, 1881-84. He was the director of color at the Buffalo Exposition of 1901.

TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE. A non-sectarian co-educational institution for negroes, located at Tuskegee Institute, Alabama. The enrollment for the summer session of 1919 was 637, and for the fall term, 972 girls and 878 boys. The faculty numbered 185. The endowment fund is \$2,279,777 and the income for the last fiscal year was \$468,146. The library contains about 24,000 volumes. Under the will of Mrs. Russell Sage, Tuskegee is to receive \$800,000. In 1919 a Boys' Trades Building was constructed, at a cost of \$226,000. The Institute was founded in 1881 by Booker T. Washington. Principal, Robert Russa Moton, LL.D.

TYPHUS AND TYPHOID FEVERS. The fact that typhus fever has occurred widely in various countries of Europe as a result of war conditions and could readily find its way to this country through ordinary travel routes, makes a review of this affection timely. In this connection it should be recalled that a century ago typhus fever included the typhoid fevers as well, as the distinction between the two was not demonstrated until long afterward. The term typhus fever was applied to a prolonged affection with continuous high temperatures and usually exhibiting a peculiar mental state characterized by stupor, whence the name, which is a Greek cognate of that Latin word. It was recognized that the affection was protean in character, constituting in its most severe form the highly epidemic and malignant famine fever, ship fever, jail fever, etc., etc., while it also appeared in a sporadic or moderately cumulative incidence known as abdominal typhus, a term still in use, but commonly replaced by the term typhoid fever. An enormous amount of observation and discussion was required before it could be shown that the two affections were quite distinct, having nothing in common. But although this distinction was generally recognized as early as 1840 it was not until the discovery of Eberth's bacillus in 1880 that an absolutely scientific demonstration of the dualism of the two diseases could be made, this organism being recognized as the exciting cause

of typhoid, while absent entirely from typhus.

At a later period in the history of epidemiology and bacteriology it was shown that clinical typhoid was itself a congeries of different infections, including two fevers known collectively as paratyphus. The existence of the latter helped to explain why some cases of clinical typhoid had a shorter duration than others and a milder course, for genuine typhoid shows considerable constancy to form. In regard to the typhoid group of fevers sanitation and protective vaccination have greatly diminished the menace of the disease which, however, is still responsible for a large amount of illness, death and detention from business throughout the country, largely due to contributory neglect by the public. Typhus fever is of the type which refuses to give up the secret of its causation to research, although the difficulty is not the lack of micro-organisms to accuse but rather in the particular one to choose, as at least four have been under observation for years. This state of affairs makes pertinent the query "may not typhus, like typhoid, be a merely clinical entity which can be realized by a number of causes?" The question is not only pertinent on general principles but already we have knowledge of a modified endemic typhus which practically does not destroy life and is not contagious. In its ordinary expression typhus is disseminated by body lice but apparently this is not the case with endemic typhus. The latter is known in New York as Brill's disease and in very exceptional cases it has been contagious or fatal. Endemic typhus doubtless exists in other large cities and other countries—for example non-contagious and mild typhus has been seen in Paris. Such cases may be seen in typhus epidemics and may occur sporadically in countries where epidemics have flourished. It is a question whether Brill's disease was originally brought to this country by Russian emigrants or is a survival of the days when the disease was epidemic in the city. Officially the last occurrence of typhus in New York was 1892. In 1895, cases diagnosed as "false" typhus were seen in Riverside Hospital and the following year Brill saw the first cases of the disease which goes by his name.

Outside of the seaports where quarantine should readily exclude emigrants affected with the disease, the chief source of danger is Mexico, in which country true typhus is usually epidemic. On one occasion the disease was brought well into the interior by Mexican laborers, but was readily controlled and there seems to be little fear on the part of the border health authorities of Mexican typhus.

TYROL. See Tirol.

UGANDA PROTECTORATE. A British protectorate in East Africa. Total area, 109,119 square miles including 16,377 square miles of water. Total population Mar. 31, 1918, 3,361,117 composed chiefly of natives (who number 3,357,080). The Europeans numbered only 570. It is divided into five provinces, namely, the Eastern, the Rudolf, the Northern, the Western, and Buganda. Total imports (1916-17) £1,296,100; total exports, £1,076,904. In 1917-18 the exports were £784,673. At the beginning of 1919 the governor and commander-in-chief was Sir R. T. Coryndon.

UKRAINE. The name of the portion of Russia, inhabited by the Ukrainians, also known as

Little Russia, comprising chiefly the Russian provinces of Podolia, Volhynia, Kiev, Poltava, Chernygov, Ekaterinoslav, and Kharkov, together with parts of the adjoining provinces. There is a population of the Ukrainian race also in the adjacent Austro-Hungarian provinces, namely in eastern Galicia, in the north-western part of Bukowina, and in part of Hungary. The number of Ukrainians in Russia has been placed at about 3,000,000, in Austro-Hungary at 3,000,000, and in other countries at 1,000,000. For an account of the Ukrainian movement for independence see the preceding YEAR BOOKS. After the Russian revolution Ukraine adopted a constitution on Dec. 23, 1917, and the first government during the spring of the following year was under General Pavlov Skoropadsky, who was supported by the Germans. On Dec. 16, 1918 the government was overthrown and after several ministries had fallen a new ministry was chosen on Apr. 25, 1919 under M. Martos. The independence of Ukraine was acknowledged by the Allied Powers in March, 1919. See WAR OF THE NATIONS.

UNEMPLOYMENT. Because of the rapid demobilization of men from military service and because of the sharp drop in the demand for labor occasioned by the signing of the armistice, the problem of unemployment was one which governments had immediately to face.

A conference was held in Washington on Dec. 5, 1918, at which a plan of cooperation whereby the national and local machinery of the national welfare organizations was linked up with the United States Employment Service, was arranged. By this action, thousands of agencies such as the local units of the Council for National Defense, the Red Cross, the Knights of Columbus, and many other bodies were brought to the assistance of the federal employment service. By this means, congestion of labor was largely relieved.

In February, 1919, the United States Employment Service was administered through 748 employment offices, each state theoretically having a district office and the remaining offices being local branches. Thus, each office should cover an average of 4048 square miles, and the employment of 136,397 persons. The height of activity was reached in November, 1918, when the registration totaled 744,712; help wanted, 1,724,943; references to employment, 748,934; placements, 558,469. Following are the statistics for the 14 months, January, 1918, to February, 1919, when the Federal Employment Service was functioning, in comparison with 31 months from May, 1915 to December, 1917, when unemployment was dealt with by the Bureau of Immigration: help wanted, 10,164,000 in comparison with 718,012; registration, 5,322,509 compared with 619,870; references to employment, 4,906,556 in comparison with 557,320; placements, 3,776,750 compared with 445,899. The placement of women from January, 1918 to February, 1919, totals 594,440.

Another conference was held in Washington Apr. 23, 1919, with governors and representatives from the States invited. There were 60 conferees present. Resolutions were adopted after discussion as follows: the employment service should be made a permanent bureau of the Department of Labor, its director to be appointed by the President; this bureau shall es-

tablish and maintain a system, coördinating the same with the various State employment services; there shall be an annual appropriation for this bureau; States having employment services shall receive a bonus from the government to equalize the expenditure put into States having no service.

CANADA. In 1916, a "trade and labor branch" was created for the period of the war. Coöperating with the Imperial Munitions Board, and the Provincial Department of Agriculture, in the year ending Oct. 31, 1918, it placed 11,812 women and 23,217 men. In November, 1918, Canada had just organized a new means for the effective distribution of labor. But the armistice necessitated the reabsorption of three-quarters of a million men in a population of between seven and eight million. The Federal authorities augmented the original Employment Act, see NEW INTERNATIONAL YEAR BOOK 1918, and later, by an order in council, the sum of \$30,000 was added to the 1918-1919 appropriation, and for 1919-1920, a special allowance of \$150,000 was voted to be added to the original budget of \$100,000. Immediately, a conference was held, attended by representatives of the federal and provincial departments of labor. The service was rapidly expanded. By July 1st, there were 89 offices, of which 35 were in Ontario. Outlying towns have one-man bureaus, while the large cities have offices with staffs as large as necessary. Each district has its clearing house, and these districts coördinate together in filling the demand. Especial attention has been paid to the satisfactory placing of soldiers. To aid in the necessary redistribution, the railroads have offered a special rate of one cent a mile, with a minimum of \$4.

GRFAT BRITAIN. The problem of demobilization and unemployment in England has been most successfully met by the government. On Nov. 25, 1918, the out-of-work donation scheme went into effect, whereby a person unemployed might receive a benefit, though obligated to accept a position if offered. The scale of benefits follows: 29s. per week for men, 25s. per week for women, 14s.6d. for boys, 12s.6d. for girls. Extra payments were made for dependents. A policy covers a civilian for six months; a person who was in military service, a year. A civilian is entitled to out-of-work donation for 13 weeks, a member of H.M.S., for 26 weeks.

On June 13th, only 376,735 or 15.3 per cent of those released from service, were unemployed, 2,077,486 having been reabsorbed into industry. Of the number unemployed who were absorbed, 518,539 were men, 900,558 were women, 100,374 boys, and 90,617 girls. The highest percentage of unemployment was—men 17.7 per cent, women 13.3 per cent, boys 7.5 per cent, girls 7.5 per cent. Policies issued November 25th to January 13th were: men 629,951, women 1,038,433, boys 108,528, girls 98,024, total 1,874,936. From this time, the number of unemployed steadily decreased as follows: July 4th, 579,025; August 1st, 553,482; August 29th, 478,084.

FRANCE. Figures have been compiled showing the decrease of the employment since the signing of the armistice. In 952 establishments, the employment of men prior to the signing of the armistice was 261,924 as compared with 194,648 on March 15th; of women 109,775 as compared with 48,768 on March 15th. This shows

a decrease in men employed of 25.6 per cent and of women employed of 55.6 per cent. The largest numerical decrease was in Paris, where the number of women employed in 241 establishments dropped from 47,980 to 20,705. In Bordeaux, the employment of women dropped 82.4 per cent.

GERMANY. At the end of the war, the employment service of Germany was unable to cope with the rapid demobilization. In January, 1919, the German Bureau of Labor Statistics reported that the general industrial situation was undergoing further deterioration. Violent labor disputes broke out throughout the country. Figures issued by the bureau show that the number of unemployed entitled to benefits were: January 1st, 500,000; February 1st, 999,369; March 1st, 1,076,368; March 30th, 1,053,854; April 19th, 914,959; April 30th, 829,758. The cause for such a large amount of unemployment is stated by the bureau as being: psychology of people, who are accustomed to lack of responsibility; violent wage disputes; growing distaste for work; scarcity of raw materials, difficulties of transport.

Shortly after the signing of the armistice, a National Office for Economic Demobilization was established. On Nov. 13, 1918, the new office issued an order making it obligatory on all municipalities to institute unemployment relief. The expense is borne: one-sixth by the municipality, two-sixths by the Federal State, three-sixths by the National Treasury. Relief is paid only to persons over 14 years of age, able and willing to work, who in consequence of the war, are indigent owing to unemployment. These persons are obligated to accept suitable work assigned to them by the employment exchange. The nature and amount of the relief is left to the communes. In Berlin, for each week day, the benefit is: for males over 17 years of age, 4 marks (95.2¢); males between 14 and 17, 3 marks (71.4¢); females over 17 years of age, 3 marks (71.4¢); females between 14 and 17, 2.5 marks (59.5¢). Additional payment is made for each dependent. Payment is made weekly. Benefits are larger in many other cities, those in Kiel and Hamburg being twice as large. By arrangement, free travel has been instituted for the unemployed. Special grants are made to agricultural laborers to relieve the great need for such workers. These steps, and the wearying of industrial warfare, have greatly alleviated conditions and the Federal Labor Ministry stated that within six months, the number of unemployed in Germany was reduced from 1,500,000 to about 500,000.

UNEMPLOYMENT INSURANCE. See SOCIAL INSURANCE.

UNION COLLEGE. A non-sectarian institution for the education of men, at Schenectady, N. Y. In the fall of 1919 there were 615 undergraduates and 44 graduate students. The faculty number 50, with five additional lecturers at regular times. Productive funds amount to \$1,189,381; the endowment is \$1,227,790, and the income for the year was \$177,288. There are 51,000 volumes in the library. Union College was founded in 1795. President, Charles Alexander Richmond, LL.D.

UNIONS, INDUSTRIAL. See INDUSTRIAL WORKERS OF THE WORLD.

UNITARIANS. Reports for 1919 show that there were in this denomination about 75,000

communicants, in the United States and Canada, with 516 ministers, and 474 churches. Sunday schools numbered 330, with 18,274 pupils, and 4881 officers and teachers. During the year much work was done among the Icelandic, Norwegian and Italian people in this country in adapting them to local conditions. A large number of them are Unitarian, and churches have been organized where services are conducted in the native language. Publication reports for 1919 show that the total production of tracts for the year has been as follows: A. U. A. series, 139,000; Memorable Sermons, 21,000; Religious Education Bulletins, 18,000; Social Service Bulletins, 12,000; Church Efficiency Pamphlets, 28,000; Religion for the New Age Series, 59,000; making a total of 277,000. The American Unitarian Association, with headquarters in Boston, is the governing body of this denomination. The Association attends to the activities both foreign and domestic. Churches as well as missionaries are maintained in Africa, Australia, Great Britain, New Zealand, Tasmania, Denmark, Norway, Sweden, Iceland, Japan, Palestine, India, Holland, Switzerland, Belgium, France, Bulgaria, Egypt, Germany, Italy, Jamaica, Russia, China, and Brazil. Divinity schools are maintained at Cambridge, Mass., Meadville, Pa., and Berkeley, Cal. Besides *Word and Work*, there are two other periodicals, the *Christian Register* and the *Beacon*. Rev. Samuel A. Eliot is president of the association, and Rev. Lewis C. Cornish is secretary.

UNITED BRETHREN IN CHRIST. There are two branches of this denomination, the Church of the United Brethren in Christ, and the Church of the United Brethren in Christ (Old Constitution). The denomination was found in 1768 by Phillip W. Otterbein, a missionary of the German Reformed Church, and reorganized in 1800.

The Church of the United Brethren in Christ conducts a general conference quadrennially, and 40 annual conferences. In 1919 there were: 347,981 church members; 2403 ministers; 3498 churches; 3223 Sunday Schools with 410,149 pupils; 1219 parsonages; 2367 Young People's Societies with a membership of 89,562. The value of church houses totaled \$15,433,558.23; parsonages, \$2,756,396.27; and contributions for all purposes during the year amounted to \$4,530,352.12. Seven colleges and theological seminaries are maintained, including Otterbein University at Westerville, Ohio. The principal periodicals are the *Religious Telescope* and the *Watchword*, published in Dayton, Ohio. A big drive to strengthen the church is to be conducted during 1920 under the name of the *United Enlistment Movement*.

The Church of the United Brethren in Christ (Old Constitution) had in 1919 about 20,000 communicants. A general conference is conducted quadrennially, and 23 annual conferences, including one in Canada. Three colleges are maintained, and the principal periodical is the *Christian Conservator* published in Ubec, Ind.

UNITED KINGDOM. See GREAT BRITAIN.
UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA. The sixty-first general assembly of this denomination was held in Pittsburgh in May, 1919. A "New World Movement" was inaugurated to raise \$10,000,000 to endow the educational and missionary work here and

abroad; the Inter-church World-Movement was endorsed; and a committee was appointed to prepare a Revised Statement of Faith. Reports presented showed the following figures: 963 congregations; 980 ministers; 155,994 communicants; 550 parsonages; 840 Young People's Societies, and 962 Sunday Schools. Missionary societies numbered 1420, conducting work in Egypt and India. Contributions to this work totaled \$1,350,342, while \$356,820 was donated to benevolences outside the denomination. For purposes of administration the presbyteries are divided into 11 synods. The church is the strongest in the Middle West. Dr. W. M. Anderson is moderator of the church.

UNITED STATES DEPARTMENT OF AGRICULTURE. See AGRICULTURE, UNITED STATES DEPARTMENT OF.

UNITED STATES EMPLOYMENT SERVICE. See UNEMPLOYMENT.

UNITED STATES. POPULATION. The population of the United States on April 15, 1910, the year in which the last census was taken, was 91,972,206. The estimated population on July 1, 1917, was 103,635,306; Jan. 1, 1918, 104,444,303; July 1, 1918, 105,253,300; Jan. 1, 1919, 106,062,297; and on July 1, 1919, 106,871,294. Iowa, again, is the only State that shows a decrease in population. The 1910 census figures showed that her population had not increased over that of 1900. The chief reason for this was the fact that practically all the usable land of the State is already under cultivation, and as there is no further room for expansion, many farmers have moved to adjoining States or to Canada, where land that is available is more plentiful. The population of the several States and territorial possessions will be found in an appropriate paragraph in the articles dealing with separate states and territories.

AGRICULTURE. The detailed article on AGRICULTURE covers all the general statistics for agricultural production in the United States and its dependencies. Articles dealing with the individual States and territories contain paragraphs on *Agriculture*, which give the acreage, production, and value of the more important crops in 1919. Special articles are carried on various crops such as WHEAT, RYE, BARLEY, CORN, HAY, etc. See also, in connection with agriculture in the United States, AGRICULTURAL EDUCATION; AGRICULTURAL EXPERIMENT STATIONS; AGRICUL-

TURAL EXTENSION WORK; AGRICULTURAL LEGISLATION; DAIRYING; FOOD AND NUTRITION; HORTICULTURE; LIQUORS; LIVE STOCK; UNITED STATES DEPARTMENT OF AGRICULTURE.

MANUFACTURES. All the leading manufacturing industries in the United States are treated under separate titles such as BOOTS AND SHOES; COTTON; IRON AND STEEL; PAPER; RUBBER; SILK; TEXTILE INDUSTRY, etc.

MINERAL PRODUCTION. For the table giving the mineral production in the United States in 1918 and 1919 see the article on MINERAL PRODUCTION. State articles also contain paragraphs on *Mineral Production* where there were any mining activities of note. Separate articles appear on nearly all the more important minerals mined in the United States. In this connection see such articles as COPPER; GOLD; IRON AND STEEL; LEAD; PLATINUM; SILVER, etc.

EDUCATION. For information relating to educational matters see the articles on EDUCATION in the UNITED STATES, and UNIVERSITIES AND COLLEGES. Under separate headings will be found statistical articles dealing with the most important universities and colleges in the United States, such as HARVARD, YALE, PRINCETON, etc.

RELIGION. Statistics and other material relating to the various religious denominations in the United States will be found under separate titles such as PRESBYTERIAN CHURCH; PROTESTANT EPISCOPAL CHURCH; ROMAN CATHOLIC CHURCH; UNITARIANS, etc.

FOREIGN COMMERCE. The total foreign commerce of the United States for the year ending June 30, 1919, was \$10,320,960,839, a record-breaking year. The value of the foreign and domestic imports in 1919 were \$3,095,876,582, as compared with \$2,945,655,403 in 1918. The value of the exports in 1919 was \$7,225,084,257 as compared with \$5,919,711,371 in 1918. This figure for 1919 was almost \$2,000,000,000 above that of 1917 which was the greatest year the United States had ever experienced in its history. Imports from Europe showed a falling off in 1919, while those from North and South America, Asia and Oceania, and Africa showed increases. Our exports to all parts of the world increased in 1919, those to Asia and Oceania showing the largest increase, over \$200,000,000. The following table shows the value of imports and exports of foreign and domestic merchandise by countries:

POST OFFICE. The revenues of the Postal Service for the fiscal year ended June 30, 1919, as reported by the auditor for the Post Office Department, including the revenues from the money-order and postal savings business, and the increase in postage derived from the 3-cent rate on letter mail and the 2-cent rate on postal cards, amounted to \$436,239,126.20. The act of Congress increasing the postage rates became effective on Nov. 2, 1917, and expired by limitation on June 30, 1919. The increase in the rates was virtually a war tax, and has been so treated in compiling statistics for comparative purposes. The collections under the act during the period in which it was in force were estimated at \$115,892,000, and were turned over to the Secretary of the Treasury monthly as they accrued, in the manner prescribed by the act. The ordinary postal revenues for the fiscal year 1919, after deducting the estimated collections for increase in postage, amounted to \$364,847,126.20. For comparative purposes this sum represents the normal revenues of the Postal Service, and shows an increase over the previous year of \$20,371,163, or 5.91 per cent. The expenditures for the year were \$362,497,635, an increase over the preceding year of \$37,663,907, or 11.59 per cent. The revenues therefore exceeded the expenditures by \$2,349,490. After deducting losses of postal funds by fire, burglary, and other causes, amounting to \$6638, the accounts as closed for the year show a surplus of \$2,342,851.

As stated in the last annual report, the volume of mail handled during the fiscal year ended June 30, 1918, exceeded that of any other like period in the history of the department, and this condition was not materially changed during the fiscal year 1919. The exigencies of war imperatively demanded that scrupulous care be exercised by every branch of the government service in conserving revenues, hence it was not possible to extend postal facilities as would have been done in normal times; but with the restoration of business from war to a peace basis the country is experiencing an era of the greatest industrial development and prosperity in its history, which naturally is reflected in the Postal Service and indicates that there has not been, by reason of the signing of the armistice, any curtailment in the responsibilities and demands imposed upon it.

The department continued during the year its assistance and coöperation to other branches of the government, utilizing the extensive organization and personnel of the Postal Service in the execution of the numerous details of the government's war programme and war activities.

	<hr/>
	\$66,606,854,907.23

ARMY AND NAVY. The army and navy are treated under various subjects, such as AERONAUTICS; MILITARY PROGRESS; NAVAL PROGRESS; SHIPBUILDING; SHIPPING; WAR OF THE NATIONS, etc.

Some of the most unusual, highly important, and extraordinary activities not connected with the mail service were placed upon the postal establishment. They may be briefly stated as follows: The establishment and maintenance of mail serv-

ice for the military forces in the United States and abroad; the operation of the telegraph and telephone systems; the transportation and delivery of tens of thousands of tons of mail for various war agencies; the administration of the provisions of the espionage and trading-with-the-enemy acts, the purposes of which were to prevent the use of the mails in disseminating matter calculated to incite disloyalty and sedition against the United States government during the war; the registration of enemy aliens and the listing of enemy-owned property by postmasters; the reporting of disloyal utterances; the use of post-office inspectors in furnishing information to the intelligence service of the army and navy and to the departments of state and justice; the distribution of over 20,000,000 questionnaires of the first and second selective drafts; the use of post offices as recruiting agencies, etc.

The mail services suspended on account of the war were restored as promptly as circumstances permitted, and at the end of the year mail service was in operation to all countries except to Hungary and the parts of Russia under Bolshevik control. During the year parcel post conventions were concluded with Chile, Paraguay, Rumania, Siam, and the Union of South Africa; and by virtue of arrangements made under conventions heretofore concluded, parcel post service was extended to Algeria, British India, Corsica, Egypt, French India, Iceland, Luxemburg, Madeira Islands, Mesopotamia, Palestine, and Tunis. The parcel post service for Belgium, Denmark, Germany, Greece, Liberia, Netherlands, Norway, and Sweden, which was suspended during the war, was resumed.

During the year 1919 the Congressional appropriation of \$100,000 for air mail service was repeated. So successful was the service that for the fiscal year ending June 30, 1920, Congress appropriated \$850,500. The success obtained in the operation of the air mail service during the fiscal year, 1918, led to an important extension of the service from New York to Chicago. This route is operated in two sections (a) New York to Cleveland, and (b) Cleveland to Chicago, and results in the expedition of the delivery of letters from New York by 16 hours to the Middle West and 24 hours to the principal Pacific Coast cities. On the three routes now established, an aggregate of 30,000,000 letters per year may be carried.

During the six-year period from July 1, 1913, to June 30, 1919, the number of first, second, and third-class offices increased from 8406 to 10,825, or 2419. In the same period the combined salaries of postmasters increased from \$14,965,500 to \$19,285,700, an increase of 28.9 per cent. In 1919 the total number of clerical employees, exclusive of assistant postmasters, at first and second-class offices, was 44,681. The total expenditure for clerical service was \$74,251,888. The average salary of clerical employees is now \$1318.03, whereas in 1913 it was \$1052.97.

Government-owned motor vehicle service continued to be extended throughout the year. It is now operated in 27 cities. This service requires 1692 trucks and a personnel of 1880 persons. By Jan. 1, 1920, it was proposed to extend the service to 30 additional cities.

The fiscal year 1919 showed an increase of \$18,851,761 in the amount on deposit in the postal savings system. There were 565,509 depositors with \$167,323,260 to their credit, and the average per capita deposit was \$295.88.

PENSIONS. During the fiscal year 1919, \$222,159,292 was paid for pensions, as compared with \$179,835,329 for 1918; \$11,228 for fees and expenses of examining surgeons, as compared with \$23,756; \$90,000 for field and special examinations, as compared with \$79,729; \$1,188,188 to pensioners in foreign countries, as compared with \$983,687. The total cost for maintenance and expense of the pension system was \$1,433,192, as compared with \$1,527,615 in 1918. The total number of pensioners on the roll at the close of the fiscal year was 624,427, as compared with 646,895 in 1918. In 1919 there were 271,391 Civil War soldiers on the roll, 293,244 Civil War widows; 81 widows of the War of 1812; 215 survivors of the Mexican war; 2739 widows of the same war; and 28,251 on the rolls as a result of the war with Spain. During the year 28 omnibus bills to grant pensions by special acts of Congress were enacted into law. These acts granted pensions or increase of pension to 3442 individuals, among whom was the widow of ex-President Roosevelt.

PATENTS. The total number of applications for patents on inventions during the fiscal year 1919 was 62,755, as compared with 62,399 during 1918; applications for patents, including reissues, designs, trademarks, labels, and prints, was 75,657 as compared with 73,307 during the preceding year. There were 17,735 applications awaiting action when the year closed. At the beginning of the year 14,769 applications were awaiting action. During the year 26,030 patents expired, as compared with 24,593 the previous year. During 1919 the following were granted or registered: 37,259 letters patent, 1355 design patents, 205 reissue patents, 3766 trade-marks, 572 labels, and 196 prints. The total receipts of the department during the year were \$2,113,350, and the total expenditures \$2,178,578, a deficit of \$65,228.

BUREAU OF MINES. During the year 1919 the Bureau of Mines continued to cooperate with the War Department, Navy Department, Department of Agriculture, United States Fuel Administration, War Industries Board, the Capital Issues Committee of the Treasury Department, the Council of National Defense, the War Trade Board, the Emergency Fleet Corporation, the United States Shipping Board, the Bureau of Standards, the National Research Council, and also with other bureaus in the Department of the Interior.

Some noteworthy results of the year's work are: In cooperation with the War and Navy Departments continued the work on plants for recovering helium, a rare gas needed for balloons and airships, from natural gas, and demonstrated the merits of the processes used; completed the construction, in cooperation with the War Department, of a plant for manufacturing sodium cyanide by the Bucher process; in cooperation with the War Department developed a plant for the manufacture of nitric acid by the oxidation of ammonia; investigated mining and milling problems at mineral deposits throughout the country in order to ascertain the available supply of war minerals, and how these minerals could be produced more efficiently; issued reports showing the markets for various ores, minerals, and metals, and giving data on the status of various mineral industries; made a thorough study on the production of sulphuric acid throughout the United States; completed a

comprehensive review of the explosion tests of coal dust at the experimental mine near Bruce-ton, Pa.; determined the value of the geophone, a device for detecting sounds transmitted through coal and rock, in recovery work, with especial reference to its use in locating mine fires and in communicating with miners entombed by a disaster; continued the study of the subsidence of the surface over coal mines in Illinois in order to ascertain what system of mining will do the least damage at the surface while permitting the largest recovery of coal; completed, in coöperation with the Bureau of Indian Affairs, the appraisal of the segregated coal and asphalt lands in Eastern Oklahoma which belong to the Choctaw and Chickasaw Nations; investigated in coöperation with the Public Health Service, dust and ventilation conditions in mines in Arizona; through field demonstrations showed operators and well drillers how large wastes of oil underground may be prevented by cementing oil wells so as to prevent water from entering the oil sands; gave the Bureau of Internal Revenue a method for estimating the future and ultimate production of oil fields and thus determining depletion allowances in taxation; issued monthly reports on the operation of petroleum refineries throughout the United States, showing the output of the refineries and the amount of crude oil that they use; studied methods of preventing losses of oil underground through the infiltration of water into oil sands; determined the advantage of the circulator method of drilling oil wells; coöperated with the State officials of Wyoming in formulating a proposed law governing the drilling of wells in that State; investigated casing troubles and fishing methods in drilling oil and gas wells; coöperated with State officials of Illinois in remedying trouble from underground water in oil fields; determined the effect of various factors on the production of gasoline from heavy oils by the vapor-phase cracking method; made a nation-wide investigation of the grades of motor gasoline being marketed; demonstrated the value of absorption for recovering gasoline vapors in the residual gas from compression plants for obtaining gasoline from natural gas; gave further attention to the recovery of oil from the oil shales of Colorado and Utah; continued investigation of the fusing temperature of the ash of different coals in order to show the liability of coals to clinker; ascertained the suitability of American graphites for various purposes; began a comprehensive investigation of the white clays of the United States and the value of these clays in the ceramic industry; began an investigation of the dolomite deposits of the Eastern States, and of the possibility of using calcined dolomite as a refractory material for lining furnaces; coöperated with the Geological Survey of Ohio in making a survey of the fire clays in that State; in coöperation with the State of Idaho investigated the treatment of complex lead, zinc, and copper-iron sulphide ores by flotation; investigated the fuel value of the lignite in the Nenana field, Alaska; continued investigation of the treatment of molybdenum ores; as a result of the examination of methods of purifying crude graphite, developed improvements in milling practices; studied the possibility of substituting domestic for imported graphite in the manufacture of crucibles; coöperated with the War Industries Board in measures to reserve an adequate supply of platinum

for war requirements; in administering the act regulating the manufacture, sale, possession, and use of explosives during the war, supervised the work of about 14,000 licensing agents throughout the United States and its insular possessions, investigated accidents at explosive plants; examined magazines for storing explosives, and began prosecutions against violators of the provisions of the act; during the year trained 9781 miners in first aid and rescue methods at the mine, safety cars, and stations, as compared with 8851 in the fiscal year 1918; investigated causes of 29 mine accidents, 19 in coal mines and 10 in metal mines; determined the limitations of army gas masks for use at fires and in industrial plants; sampled coal mines for the Navy Department and prepared reports on the quality of coal and the methods of mining and preparing it for the market; continued the work on the explosibility of coal dust from different mines, thereby gaining additional information on how coal mine explosions can be prevented or limited; developed a new method of signaling danger to miners underground by the injection of an ill-smelling substance into the compressed air lines supplying mining machines and pumps; continued tests of explosives to determine their suitability for use in mines and quarries; made further tests of an explosive made of liquid oxygen mixed with carbonaceous material, and investigated its suitability for mining use; in coöperation with State mine inspectors, collected and published monthly reports on fatalities at coal mines throughout the country; improved furnaces in boilers of the Emergency Fleet, increasing the economy 16 per cent; acted in an advisory capacity for the United States Fuel Administration in matters of conservation; aided in extending the use of bituminous coal in water-gas manufacture; planned and had charge of the construction of the government fuel yards in the District of Columbia, from which all Federal and District government plants in or adjacent to the District are supplied; prepared for the War and Navy Departments special steel containing uranium, tungsten, molybdenum, and zirconium.

EMBASSIES AND LEGATIONS TO THE UNITED STATES

Argentina—Tomas A. Le Breton, Ambassador extraordinary and minister plenipotentiary.
 Belgium—Baron E. de Cartier de Marchienne, Ambassador extraordinary and minister plenipotentiary.
 Bolivia—Don Ignacio Calderon, Envoy extraordinary and minister plenipotentiary.
 Brazil—Domício da Gama, Ambassador extraordinary and minister plenipotentiary.
 Bulgaria—Stephen Panaretoff, Envoy extraordinary and minister plenipotentiary.
 Chile—Don Beltran Mathieu, Ambassador extraordinary and minister plenipotentiary.
 China—Vi Kyuin Wellington Koo, Envoy extraordinary and minister plenipotentiary.
 Colombia—Carlos Adolfo Urueta, Envoy extraordinary and minister plenipotentiary.
 Costa Rica—Absent.
 Cuba—Carlos Manuel de Céspedes, Envoy extraordinary and minister plenipotentiary.
 Denmark—Constantin Brun, Envoy extraordinary and minister plenipotentiary.
 Dominican Republic—Luis Galván, Envoy extraordinary and minister plenipotentiary.
 Ecuador—Don Rafael H. Elizalde, Envoy extraordinary and minister plenipotentiary.
 Finland—Armas Herman Saastamoinen, Envoy extraordinary and minister plenipotentiary.
 France—J. J. Jusserand, Ambassador extraordinary and plenipotentiary.
 Great Britain—Viscount Grey of Fallodon, Appointed ambassador extraordinary and plenipotentiary.
 Greece—Georges Roussos, Envoy extraordinary and

minister plenipotentiary.

Guatemala—Don Joaquín Méndez, Envoy extraordinary and minister plenipotentiary.

Haiti—Charles Moravia, Envoy extraordinary and minister plenipotentiary.

Honduras—Don J. Antonio López Gutierrez, Envoy extraordinary and minister plenipotentiary.

Italy—Prince Alliata di M. di Villafranca, Counselor of embassy and chargé d'affaires ad interim.

Japan—K. Shidenara, Appointed ambassador extraordinary and plenipotentiary.

Mexico—Ing. Ygnacio Bonillas, Ambassador extraordinary and minister plenipotentiary.

Montenegro—Antoine Gvosdenovitch, Envoy extraordinary and minister plenipotentiary (absent)

Netherlands—J. T. Cremer, Envoy extraordinary and minister plenipotentiary.

Nicaragua—Don Diego Manuel Chamorro, Envoy extraordinary and minister plenipotentiary.

Norway—H. H. Bryn, Envoy extraordinary and minister plenipotentiary.

Panama—Don Belisario Porras, Envoy extraordinary and minister plenipotentiary.

Paraguay—Manuel Gondra, Envoy extraordinary and minister plenipotentiary.

Persia—Mirza Abdul Ali Khan, Sadigh-es-Saltaneh, Envoy extraordinary and minister plenipotentiary.

Peru—Don Carlos Gibson, Secretary of embassy and chargé d'affaires ad interim.

Portugal—Viscount d'Alte, Envoy extraordinary and minister plenipotentiary.

Rumania—N. H. Lahovary, Secretary of legation and chargé d'affaires ad interim.

Russia—Boris Bakhmetieff, Ambassador extraordinary and plenipotentiary.

Salvador—Don Salvador Sol, Envoy extraordinary and minister plenipotentiary.

Serbs, Croats, and Slovenes—Slavko Y. Grouitch, Envoy extraordinary and minister plenipotentiary.

Siam—Phya Prabha Karavongse, Envoy extraordinary and minister plenipotentiary.

Spain—Don Juan Riaño y Gayangos, Ambassador extraordinary and plenipotentiary.

Sweden—W. A. F. Ekengren, Envoy extraordinary and minister plenipotentiary.

Switzerland—Hans Sulzer, Envoy extraordinary and minister plenipotentiary.

Uruguay—Jacobo Varela, Appointed envoy extraordinary and minister plenipotentiary.

Venezuela—Don Santos A. Dominici, Envoy extraordinary and minister plenipotentiary.

EMBASSIES AND LEGATIONS OF THE UNITED STATES

Argentina—Frederic Jessup Stimson, Ambassador extraordinary and plenipotentiary.

Belgium—Brand Whitlock, Ambassador extraordinary and minister plenipotentiary.

Bolivia—S. Abbot Maginnis, Envoy extraordinary and minister plenipotentiary.

Brazil—Edwin V. Morgan, Ambassador extraordinary and minister plenipotentiary.

Bulgaria—Envoy extraordinary and minister plenipotentiary.

Chile—Joseph H. Shea, Ambassador extraordinary and plenipotentiary.

China—Paul S. Reinsch, Envoy extraordinary and minister plenipotentiary.

Colombia—Hoffman Philip, Envoy extraordinary and minister plenipotentiary.

Costa Rica—

Cuba—William E. Gonzalez, Envoy extraordinary and minister plenipotentiary.

Czecho-Slovakia—Richard Crane, Envoy extraordinary and minister plenipotentiary.

Denmark—Norman Hapgood, Envoy extraordinary and minister plenipotentiary.

Dominican Republic—William W. Russell, Envoy extraordinary and minister plenipotentiary.

Ecuador—Charles S. Hartman, Envoy extraordinary and minister plenipotentiary.

Egypt—Hampson Gary, Agent and consul-general.

France—Hugh Campbell Wallace, Ambassador extraordinary and minister plenipotentiary.

Great Britain—John W. Davis, Ambassador extraordinary and minister plenipotentiary.

Greece and Montenegro—Garrett Droppers, Envoy extraordinary and minister plenipotentiary.

Guatemala—Benton McMillin, Envoy extraordinary and minister plenipotentiary.

Haiti—Arthur Bailly-Blanchard, Envoy extraordinary and minister plenipotentiary.

Honduras—T. Sambola Jones, Envoy extraordinary and minister plenipotentiary.

Italy—Thomas Nelson Page, Ambassador extraordinary and minister plenipotentiary.

Japan—Roland S. Morris, Ambassador extraordinary and minister plenipotentiary.

Liberia—Joseph L. Johnson, Minister resident and consul-general.

Mexico—Henry P. Fletcher, Ambassador extraordinary and minister plenipotentiary.

Morocco—Maxwell Blake, Agent and consul-general.

The Netherlands and Luxemburg—Envoy extraordinary and minister plenipotentiary.

Nicaragua—Benjamin L. Jefferson, Envoy extraordinary and minister plenipotentiary.

Norway—Albert G. Schmedeman, Envoy extraordinary and minister plenipotentiary.

Panama—William J. Price, Envoy extraordinary and minister plenipotentiary.

Paraguay—Daniel F. Mooney, Envoy extraordinary and minister plenipotentiary.

Persia—John L. Caldwell, Envoy extraordinary and minister plenipotentiary.

Peru—Envoy extraordinary and minister plenipotentiary.

Poland—Hugh S. Gibson, Envoy extraordinary and minister plenipotentiary.

Portugal—Thomas H. Burch, Envoy extraordinary and minister plenipotentiary.

Rumania—Charles J. Vopica, Envoy extraordinary and minister plenipotentiary.

Russia—David R. Francis, Ambassador extraordinary and minister plenipotentiary.

Salvador—Boaz W. Long, Envoy extraordinary and minister plenipotentiary.

Serbs, Croats, and Slovenes—H. Percival Dodge, Envoy extraordinary and minister plenipotentiary.

Siam—Envoy extraordinary and minister plenipotentiary.

Spain—Joseph E. Willard, Ambassador extraordinary and minister plenipotentiary.

Sweden—Ira Nelson Morris, Envoy extraordinary and minister plenipotentiary.

Switzerland—Pleasant A. Stovall, Envoy extraordinary and minister plenipotentiary.

Uruguay—Robert Emmet Jeffery, Envoy extraordinary and minister plenipotentiary.

Venezuela—Preston McGoodwin, Envoy extraordinary and minister plenipotentiary.

SIXTY-FIFTH CONGRESS, SHORT SESSION. Jan. 7. Chairman Sims of the House Committee on Interstate Commerce introduced two amendments to the Railway Control Act, which would extend operation for five years and provide an additional revolving fund of \$500,000,000.

Jan. 9. A measure is passed by the House authorizing the Secretary of War to adjust contracts for material, partly fulfilled when the war ended.

Jan. 13. The House appropriates \$100,000,000 for furnishing foodstuffs to populations in Europe and countries contiguous thereto outside of Germany, in accordance with a cabled request from the President; a \$27,000,000 River and Harbor Bill was also passed.

Jan. 16. Mr. La Follette is exonerated in the Senate of the charge of disloyalty.

Jan. 24. The Senate passes a bill appropriating \$100,000,000 for relief of the famine conditions in Europe, exclusive of the Central Empires but including the non-Turkish parts of Asia Minor.

Jan. 28. The Immigration Committee of the House reports a bill prohibiting immigration into the United States for a period of four years; the Post Offices Committee votes in favor of returning the telephone and telegraph systems to their owners on Dec. 31, 1919.

Jan. 31. In the House, the Naval Committee reports a naval appropriations bill carrying \$600,000,000 for new construction. This was to be cancelled in the event of international limitations of armaments.

Feb. 6. In the House, the War Revenue Bill is submitted, as agreed upon by a conference committee of both branches; the measure is esti-

mated to raise \$6,000,000,000 in taxes for the current fiscal year and \$4,000,000,000 a year thereafter.

Feb. 8. The Senate adopts the Post Office appropriation bill carrying \$400,000,000 and authorizing \$200,000,000 additional for the construction of roads during the next three years. The House Committee on Agriculture introduces a bill providing \$1,000,000,000 to sustain the government's guarantee of \$2.26 a bushel for wheat, in face of a much lower price which will obtain in the world's markets. The conference report on the revenue bill was adopted by a vote of 310 to 11.

Feb. 10. In the Senate a resolution providing for woman suffrage by Federal Constitutional amendment fails a second time by a margin of one vote to obtain the necessary two-thirds; opposition is chiefly among Southern Democrats. The army appropriation bill of \$1,117,290,000 was reported in the House.

Feb. 11. The naval appropriation bill carrying the Administration's building plan passes the House, 194 to 142.

Feb. 13. The Senate adopts the conference report on the revenue bill.

Feb. 14. The Senate refuses to consider a resolution by Mr. Johnson of California who demands the withdrawal of American troops from Russia.

Feb. 18. The House passes the army appropriation bill, limiting enlistment to one year, eliminating the committee's proposal of a temporary army of 500,000, and providing for an army of 175,000.

Feb. 19. Senator Poindexter severely criticizes the constitution of the League of Nations, as surrendering high functions of sovereignty.

Feb. 22. Senator Reed denounces the League of Nations as abrogating the Monroe Doctrine. The House adopts the bill sustaining the government's price of \$2.26 on wheat. The Ways and Means Committee reports legislation for the Victory Liberty Loan.

Feb. 24. Senator Lewis defends the League of Nations.

Feb. 26. The House passes the Victory Loan bill.

Feb. 27. The Senate adopts the wheat guarantee bill.

Feb. 28. Senator Lodge attacks the League of Nations.

March 2. The Senate, after an all-night session, adopts the bill providing for the Victory Loan.

March 3. Senator Lodge offers a resolution recommending the rejection of the proposed constitution of the League of Nations, and reads the names of 37 Senators in the next Congress who have signed the resolution.

March 4. In the Senate a filibuster conducted principally by Senator Sherman of Illinois defeats an appropriation for financing railroads and constructing ships; the annual appropriation bills of the army and navy also fail of passage. The 65th Congress comes to an end with many important legislative measures remaining without final vote.

March 6. A Senate committee investigating Bolshevism continues its hearings. Raymond Robins, head of the American Red Cross mission to Russia, although widely reported as favoring the Bolsheviks, denounces the movement as a

menace, economically impossible, and morally wrong.

March 8. The Senate committee investigating Bolshevism hears David R. Francis, recently returned ambassador to Russia, who declares that slaughter will follow the withdrawal of the Allies.

SIXTY-SIXTH CONGRESS, SPECIAL SESSION. May 19. The Sixty-sixth Congress meets in special session, with the Republicans in control in both houses. Mr. Cummins was selected president pro tem in the Senate, and Mr. Gillett, of Massachusetts, was selected as Speaker of the House of Representatives.

May 20. A message from President Wilson, cabled from Europe, is read in both branches. He recommends reconsideration of taxes, tariff protection for chemical and dye industries, passage of the woman suffrage proposal, repeal of war-time prohibition against manufacturing light wines and beers, and the passage of labor legislation.

May 21. The House passes the woman suffrage amendment to the Constitution by a vote of 304 to 89. The House also passes a deficiency appropriation bill carrying \$45,000,000 to pay overdue obligations to dependents of soldiers and sailors.

May 23. The Senate passes the war risk insurance bill without debate.

May 28. All the Senate committee assignments agreed upon in caucus were ratified by a party vote of 49 to 42. The expected revolt of the progressive Republicans failed to materialize.

June 2. Senator Johnson of California makes an attack on the League of Nations.

June 3. Senator Lodge and Senator Borah charge that the texts of the Peace Treaty are in the hands of certain New York financiers. The Interstate Commerce Committee reports favorably on a bill providing for the immediate return of the telephone and telegraph systems.

June 4. The Senate adopts the woman suffrage amendment to the United States Constitution by a vote of 56 to 25.

June 6. The House Committee on Military Affairs completes the annual army appropriation bill carrying \$800,000,000.

June 9. Senator Borah produces a copy of the treaty of peace with Germany, brought by a newspaper man from Paris, and after long debate, succeeds in printing it in the *Record*. In the House, the Appropriations Committee reports a bill providing \$750,000,000 for the needs of the Railroad Administration, declining to grant the Director General's request for \$1,200,000,000.

June 10. In the Senate, Mr. Knox offers a resolution serving notice upon the Peace Conference that the Senate desires separation of the question of a League of Nations from the Treaty of Peace. The House passes the railroad appropriation bill.

June 11. The Senate Committee investigating the source of a copy of the peace treaty, is informed by Elihu Root, former Secretary of State, that it was he who had shown it to Mr. Lodge, after obtaining it through two New York financiers who had been serving with the American Peace Delegation in important capacities. The House decides to appropriate money for an army of 300,000 men; the War Department had wanted 500,000, and the Committee on Military Affairs had recommended 400,000.

FOUR UNITED STATES SENATORS PROMINENT DURING 1919

June 12. The Senate Foreign Relations Committee favorably reports the Knox Resolution. . . . The railroad appropriation bill is passed; also a measure restoring rate-making power to the Interstate Commerce Commission. In the House the naval appropriation bill is reported, carrying \$601,500,000, which is \$120,000,000 less than the bill sent to the Senate at the last session.

June 16. The Senate Committee on Military Affairs is urged, by the Secretary of War, Mr. Baker, and the Chief of Staff, General March, to provide for an army of 500,000 men. The House passes the naval appropriation bill; \$15,000,000 is provided for naval aviation, only one-third of the Department's recommendation.

June 17. In the Senate, Mr. Knox speaks in support of his resolution to separate the Covenant of the League of Nations from the Peace Treaty, demanding more time for consideration of the Covenant, and opportunity for deliberate decision on the wisdom of the United States joining the League. The House Committee investigating the Administration's conduct of the War forms five sub-committees—on aviation, cantonnements, expenditures abroad, quartermaster corps, and ordnance.

June 18. Both branches vote for repeal of the daylight saving law, to take effect at the end of the present summer. In the Senate, Mr. McCumber speaks at length in defense of the Covenant of the League of Nations.

June 19. The Senate Committee on Naval Affairs is urged by Secretary Daniels to increase the House provision for aviation. In the Senate, Mr. Thomas speaks at length in criticism of the Knox resolution, and charges the Republicans with playing politics. The House, without roll call, passes the bill to restore telephone and telegraph lines to their owners.

June 21. The Senate Republicans opposing the Covenant of the League of Nations are advised by Elihu Root, former Secretary of State, to register their objections by a qualifying resolution, adopted with the ratification of the treaty.

June 23. The Senate Committee on Naval Affairs completes consideration of the annual appropriation bill, carrying \$646,272,000.

June 24. The Senate votes to provide for an army of 400,000 men; The House had made provision for only 300,000. Senate and House conferees on the bill to turn back the wire systems to their owners agree upon August 1st as the date when the transfer should be made.

June 25. The Senate passes the army appropriation bill, carrying \$880,000,000.

June 26. The Senate passes the naval appropriation bill, after increasing the amount available for aviation. In the House, the Judiciary Committee completes its draft of a bill for the enforcement of the prohibition amendment to the Constitution and of the war-time prohibition act.

June 27. Senate and House conferees agree upon an army strength of 325,000.

June 28. The Senate passes the sundry civil appropriation bill, the last of the supply measures.

June 30. In the Senate, Mr. Borah asserts that financial and business interests are back of propaganda to force the Senate to accept the Covenant of the League of Nations. Both branches adjourn until July 8th, having passed

all appropriation measures for the fiscal year beginning July 1st.

July 9. In the House, the Chairman of the Rules Committee, Mr. Campbell, offers a resolution making it unlawful for the President to absent himself from the territorial jurisdiction of the United States.

July 10. In the Senate, President Wilson presents the Peace Treaty and explains the atmosphere in which the peace delegates worked.

July 14. In the Senate, Mr. Swanson delivers an address in support of the Peace Treaty and the League of Nations, which is understood to represent the President's views. The House fails to pass the agricultural appropriation bill over the President's veto, although the measure receives 247 votes to 135; in considering the prohibition enforcement bill, the House rejects an amendment permitting the sale of beer containing not more than 2.75 per cent of alcohol.

July 15. In the Senate debate on the Peace Treaty, Mr. Lodge declares that the Shantung provision was a bribe to Japan; Mr. Norris also assails the outrage perpetrated on China.

July 16. The Senate adopts a resolution calling upon the President for a copy of the Treaty alleged to have been entered into between Germany and Japan before the close of the war. The House repasses the sundry civil appropriations bill (vetoed by the President), increasing the provision for disabled soldiers from \$6,000,000 to \$14,000,000.

July 17. The Senate adopts a resolution calling upon the President for a copy of a letter expressing the protest of three members of the American Peace Delegation against the Shantung provisions of the peace treaty.

July 18. The Senate passes the sundry civil appropriations bill. The House passes the agricultural appropriation bill after eliminating the provision repealing the daylight saving law which has caused the President to veto the original measure.

July 22. The Senate Foreign Relations Committee, by a party vote, declines to approve the President's request that an American member of the Reparations Commission be appointed prior to ratification of the peace treaty. The House passes a drastic prohibition enforcement bill by a vote of 287 to 100. The Rules Committee begins an inquiry into the Mexican situation, with Ambassador Fletcher as the first witness; he submits a list of 217 Americans officially known to have been killed in Mexico since 1911.

July 23. The Senate passes the agricultural bill. In the House the Speaker receives the draft of a bill from the Secretary of the navy which would permit the navy to continue in peace time to handle commercial wireless messages.

July 24. In the Senate, Mr. Lodge introduces a resolution calling upon the President to transmit to the Senate the proposed treaty with France, one of the provisions of which is that it should be submitted simultaneously with the Peace Treaty.

July 25. In the Senate, Mr. Pittman, a member of the Senate Foreign Relations Committee, urges ratification of the Peace Treaty, without reservations; if not, he maintains other nations would be encouraged to make reservations, and reservations in any event would have no standing.

July 28. The Senate Foreign Relations Committee completes the reading of the peace treaty.

The House votes to repeal the 10 per cent tax on soda water and ice cream, and to reduce the tax on fruit juices; a resolution is passed providing for adjournment from August 2d to September 9th.

July 29. In the Senate the amended treaty with Colombia is unanimously reported by the Foreign Relations Committee; the "regret" of the United States in the original draft of 1914, is omitted. The House passes a resolution directing the Secretary of War to sell surplus army food to the public without delay.

July 31. In the Senate, Mr. Owen and Mr. Ransdell urge ratification of the Peace Treaty; the Foreign Relations Committee begins public hearings on the treaty. In both branches identical bills are introduced proposing six months' universal training for all young men between the ages of 18 and 20; in the House the bill is introduced by Mr. Kahn, Chairman of the Military Affairs Committee, and in the Senate by Mr. Chamberlain.

August 1. The Senate receives from the President a brief protocol of the Peace Treaty with Germany, indicating precisely how certain provisions are to be carried out. The Speaker and the Republican floor leader of the House both receive letters from the President asking that recess be postponed because of the railway wage and cost-of-living crises.

August 4. The Senate and House Committees on Military Affairs receive from the Secretary of War a bill providing for three months' military training for all youths in their nineteenth year.

August 6. The Senate Foreign Relations Committee questions Mr. Lansing, Secretary of State, and one of the American delegates at the Peace Conference, regarding controverted points in the treaty. The House Committee on Interstate Commerce questions Warren S. Stone, chief leader of the railroad employees, and Frank Morrison, Secretary of the American Federation of Labor, regarding the Plumb Plan for nationalization of the railroads embodied in a bill introduced by Mr. Sims.

August 7. In the Senate debate upon the League of Nations, Mr. Lodge proposes that the Senate require acceptance by at least four other nations of such reservations as may be adopted.

August 7-9. The House Committee on Interstate Commerce hears Mr. Glenn E. Plumb explain his plan for nationalization of the railroads.

August 8. Both branches assemble in the House Chamber and are addressed by the President on the necessity for reducing the cost of living; he recommends extension of government food control, regulation of cold storage, the sale of surplus supplies, the marking of goods with the price paid to producer, and an additional appropriation to Government agencies to inform the public of the fair prices. The Senate Foreign Relations Committee refers the Colombia Treaty to a sub-Committee, with instructions to draft a reservation to protect American oil interests.

August 11. The Senate Judiciary Committee begins consideration of the prohibition enforcement bill, modifying some of the more drastic provisions in the House measure. The Senate receives from the President a reply to requests for certain data relating to the Peace Conference. He reports that he knows of no negotiations between Germany and Japan during the War, and that he has no information of any attempt by

Japanese peace commissioners to intimidate Chinese delegates; he declines to transmit the memorandum of the American Peace Commissioners protesting against the Shantung provision, because it contains confidential references to other governments. The Senate Committee on Foreign Relations questions Secretary Lansing regarding Peace Treaty matters; he testifies that his first knowledge of Japan's actual secret agreement with the Allies regarding the disposition of German Colonies in the Pacific, came nearly two years after the United States entered the war.

August 12. In the Senate, Mr. Lodge, chairman of the Foreign Relations Committee, delivers an extended address, in criticism of the proposed League of Nations, which he terms a "deformed experiment."

August 19. The House passes, over the veto of the President, the law repealing the daylight saving law; the vote being eight more than the necessary two-thirds.

August 20. Senator Pittman of Nevada introduces a resolution embracing four interpretive reservations of the Peace Treaty, designed to meet the criticisms and yet meet with the approval of the President. A bill is introduced in the House, the purpose of which was to refuse admission to immigrants for a period of two years.

August 23. The Senate Committee on Foreign Affairs, by a vote of nine to eight, favors an amendment to the Peace Treaty substituting China for Japan as the nation to which Germany must surrender Shantung.

August 26. The Senate Foreign Relations Committee votes to amend the Peace Treaty so as to eliminate the United States from membership on all commissions except that relating to reparations.

August 28. The House passes a bill designed to give the rank of General to John J. Pershing.

August 29. The Senate Foreign Relations Committee adopts an amendment to the Peace Treaty, assuring the United States as many votes as the British Empire possesses in the League of Nations. Another amendment adopted would prevent dependencies like the British dominions from voting upon questions affecting the mother country or other dependencies of that country.

Sept. 2. Senator Cummins, of the Interstate Commerce Committee, introduces a railroad bill providing for immediate return of the railroads to private ownership, creating a railroad transportation board, and dividing the railroads into 20 to 35 separate systems; the employees to share in excess profits. The bill providing for the permanent rank of General for Pershing is passed.

Sept. 3. The Senate passes the bill to permit the leasing of public lands containing deposits of oil, coal, and gas.

Sept. 5. The Senate passes the measure designed to enforce national prohibition.

Sept. 8. The Committee on Foreign Relations begins hearings on conditions in Mexico, with Mr. Fall of New Mexico as chairman of a sub-committee. The House passes a bill creating the permanent rank of Admiral for William S. Sims and for William S. Benson.

Sept. 10. In the Senate, Mr. Lodge presents the majority report of the Committee on Foreign Relations on the Peace Treaty, proposing many amendments and reservations.

Sept. 11. Senator Hitchcock submits a minor-

ity report of the Committee on Foreign Relations.

Sept. 18. Both branches assemble in the House chamber and bestow upon Gen. John J. Pershing the thanks of Congress.

Sept. 22. The League of Nations is denounced by Senator Reed. Prominent labor leaders appear before the Senate and speak against the Cummins railway bill.

Sept. 24. The House passes the Senate bill restoring to the Interstate Commerce Commission the power to review railway rates established by the United States Railroad Administration.

Sept. 25. An investigation of the conditions that caused the steel strike is begun in the Senate.

Oct. 1-2. Elbert H. Gary appears before the Senate Committee investigating the steel strike.

Oct. 2. Amendments proposed by Senator Fall designed to prevent the United States from serving on any international commissions are defeated in the Senate.

Oct. 8. In the House a special committee introduces a bill providing for the establishment of a budget system.

Oct. 9. The House passes a bill repealing the Canadian Reciprocity Act of 1910, which had never been ratified by Canada.

Oct. 16. The Senate, by a vote of 55 to 35, rejects the Lodge amendments to the peace treaty which provide for the restoration of Shantung province to China rather than to Japan. The House passes a bill extending wartime passport regulations for one year in order to have a check on radical immigration after the peace treaty is signed.

Oct. 20. The Senate completes the reading of the peace treaty.

Oct. 22. The Senate passes the measure extending for one year the wartime passport regulations.

Oct. 23. The Cummins railroad bill is reported from committee.

Oct. 24. In the House the committee considering the case of Victor Berger, recommends his exclusion from membership on the ground of disloyalty to the United States during the war.

Oct. 27. The House, by a vote of 176 to 55, passes the prohibition enforcement act over the President's veto.

Oct. 28. Both branches are addressed by King Albert of Belgium. The Senate passes the prohibition enforcement act by a vote of 65 to 20, and the measure becomes a law.

Oct. 29. The Senate rejects three amendments to the Peace Treaty aimed to equalize the British Empire's representation in the League of Nations constitution.

Oct. 31. General Pershing recommends a standing army of not more than 300,000.

Nov. 7. The Senate by a vote of 48 to 40, adopts the preamble to the proposed reservation to the Peace Treaty, which declares that ratification by the United States shall not be effective or binding until the reservations have been accepted by three of the four principal Allied powers.

Nov. 10. The House railroad bill is reported by Chairman Esch of the Committee on Interstate Commerce. By a vote of 309 to 1 the House refuses to seat Victor L. Berger.

Nov. 13. The Senate adopts the first of a series of reservations to the Peace Treaty. It declares that military or naval forces of the

United States cannot be used, under article X of the constitution of the League of Nations, without the consent of Congress.

Nov. 15. The Senate adopts 10 drastic amendments to the peace treaty.

Nov. 17. The House passes the Esch bill providing for the return of the railroads to their former owners.

Nov. 19. The Senate rejects the Peace Treaty. Both branches adjourn *sine die*, and the special session comes to an end.

SIXTY-SIXTH CONGRESS. REGULAR SESSION. Dec. 1. The Sixty-Sixth Congress meets in its first regular session after an interval of 11 days from the sudden adjournment of the special session.

Dec. 2. In both branches, the President's message is read; he recommends consideration of tax revision downward, relief for ex-soldiers, and measures to reduce the cost of living; he urges Congress to "help bring about a genuine democratization of industry."

Dec. 8. A letter from the President to Senator Fall is read in the Senate. It commented upon the pending resolution to break diplomatic relations with Mexico, and declared that the President would be "gravely concerned" if the resolution passed.

Dec. 13. The Senate debates responsibility for the failure to pass the Peace Treaty.

Dec. 16. The Senate passes the bill continuing government control of sugar through 1920.

Dec. 18. The Senate rejects a proposal to eliminate the anti-strike provisions of the Cummins railway bill.

Dec. 19. The Senate passes the House bill increasing war-risk allowances to soldiers and sailors annually, and providing for simplified administration.

Dec. 20. The Senate passes the Cummins railroad bill by a vote of 46 to 30. The bill goes to a conference, committed with the Esch bill from the House. The House adopts a drastic amendment to the Immigration law, to facilitate exclusion and deportation of alien radicals. Both branches go into virtual recess until Jan. 5, 1920, under an agreement not to transact important business.

MEMBERSHIP OF 66th CONGRESS

[Republicans in roman; Democrats in italics; Prohibitionist in SMALL CAPS; Republican and Progressive in roman with *; Independent in CAPS; Independent Republican in *italic CAPS*.]

ALABAMA.—SENATORS: John H. Bankhead, Oscar W. Underwood. REPRESENTATIVES (Democrats, 10): John McDuffie, S. Hubert Dent, Jr., Henry B. Steagall, Fred L. Blackmon, J. Thomas Heftin, William B. Oliver, Lulus B. Rainey, Edward B. Atton, George Huddleston, William B. Bankhead.

ARIZONA.—SENATORS: Henry F. Ashurst, Marcus A. Smith. REPRESENTATIVE (Democrat, 1): At large, Carl Hayden.

ARKANSAS.—SENATORS: Joseph T. Robinson, William F. Kirby. REPRESENTATIVES (Democrats, 7): Thaddeus H. Caraway, William A. Oldfield, John N. Tillman, Otis Wingo, H. M. Jacoway, Samuel M. Taylor, William S. Goodwin.

CALIFORNIA.—SENATORS: James D. Phelan, Hiram W. Johnson.* REPRESENTATIVES (Republicans, 6; Democrats, 4; Prohibitionist, 1): Clarence F. Lea, John E. Baker, Charles F. Curry, Julius Kahn, John I. Nolan, John A. Elston, Henry E. Barbour, Hugh S. Hereman, CHARLES H. RANDALL, Henry Z. Osborne, William Kettner.

COLORADO.—SENATORS: Charles S. Thomas, Lawrence C. Phipps. REPRESENTATIVES (Republicans, 3; Democrat, 1): William N. Valle, Charles B. Timberlake, Guy U. Hardy, Edward T. Taylor.

CONNECTICUT.—SENATORS: Frank B. Brande-

gee, George P. McLean. REPRESENTATIVES (Republicans, 4; Democrat, 1): Augustine Lonergan, Richard P. Freeman, John Q. Tilson, Schuyler Merritt, James P. Glynn.

DELAWARE.—SENATORS: Josiah O. Wolcott, L. Heister Ball. REPRESENTATIVE (Republican, 1): At large, Caleb R. Layton.

FLORIDA.—SENATORS: Duncan U. Fletcher, Park Trammell. REPRESENTATIVES (Democrats, 4): Herbert J. Drane, Frank Clark, John H. Smithwick, William J. Sears.

GEORGIA.—SENATORS: Hoke Smith, William J. Harris. REPRESENTATIVES (Democrats, 12): James W. Overstreet, Frank Park, Charles R. Crisp, William C. Wright, William D. Upshaw, James W. Wise, Gordon Lee, Charles H. Brand, Thomas M. Bell, Carl Vinson, William C. Lankford, William W. Larsen.

IDAHO.—SENATORS: William E. Borah, John F. Nugent. REPRESENTATIVES (Republicans, 2): Burton L. French, Addison T. Smith.

ILLINOIS.—SENATORS: Lawrence Y. Sherman, Medill McCormick. REPRESENTATIVES (Republicans, 22; Democrats, 5): At large, William E. Mason, Richard Yates; Martin B. Madden, James R. Mann, William W. Wilson, John W. Rainey, Adolph J. Sabath, James McAndrews, Niels Juul, Thomas Gallagher, Fred A. Britten, Carl R. Chindblom, Ira C. Copley, Charles E. Fuller, John O. McKenzie, William J. Graham, Edward J. King, Clifford Ireland, Frank L. Smith, Joseph G. Cannon, William B. McKinley, Henry T. Rainey, Loren E. Wheeler, William A. Rodenberg, Edwin B. Brooks, Thomas S. Williams, Edward E. Denison.

INDIANA.—SENATORS: James E. Watson, Harry S. New. REPRESENTATIVES (Republicans, 13): Oscar R. Lühring, Oscar E. Bland, James W. Dunbar, John S. Benham, Everett Sanders, Richard N. Elliott, Merrill Moores, Albert H. Vestal, Fred S. Purnell, William R. Wood, Milton Kraus, Louis W. Fairfield, Andrew J. Hickey.

IOWA.—SENATORS: Albert B. Cummins, William S. Kenyon. REPRESENTATIVES (Republicans, 11): Charles A. Kennody, Harry E. Hull, Burton E. Sweet, Gilbert N. Haugen, James W. Good, C. William Ramseyer, Cassius C. Dowell, Horace M. Townner, William R. Green, L. J. Dickinson, William D. Boies.

KANSAS.—SENATORS: Charles Curtis, Arthur Capper. REPRESENTATIVES (Republicans, 7; Democrat, 1): Daniel R. Anthony, Jr., Edward C. Little, Philip P. Campbell, Homer Hoch, James G. Strong, Hays B. White, J. N. Tinchner, William A. Ayres.

KENTUCKY.—SENATORS: J. C. W. Beckham, A. Owsley Stanley. REPRESENTATIVES (Republicans, 4; Democrats, 7): Abner W. Bakley, David H. Kinchloe, Robert Y. Thomas, Jr., Ben Johnson, Charles F. Ogden, A. B. Rouse, James C. Cantrill, King Swope, William J. Fields, John W. Langlev, John M. Robison.

LOUISIANA.—SENATORS: Joseph E. Ransdell, Edward J. Gay. REPRESENTATIVES (Democrats, 8): James O'Connor, H. Garland Dupré, Whitell P. Martin, John T. Watkins, Riley J. Wilson, Jared Y. Sanders, Ladislao Lazaro, James B. Aweell.

MAINE.—SENATORS: Bert M. Fernald, Frederick Hale. REPRESENTATIVES (Republicans, 4): Louis B. Goodall, Wallace H. White, Jr., John A. Peters, Ira G. Hersey.

MARYLAND.—SENATORS: John Walter Smith, Joseph I. France. REPRESENTATIVES (Republicans, 3; Democrats, 3): William N. Andrews, Carrille D. Benson, Charles P. Coady, J. Charles Linthicum, Sydney F. Mudd, Frederick N. Zihlman.

MASSACHUSETTS.—SENATORS: Henry Cabot Lodge, David I. Walsh. REPRESENTATIVES (Republicans, 12; Democrats, 4): Allen T. Treadway, Fredrick H. Gillett, Calvin D. Paige, Samuel E. Winslow, John Jacob Rogers, Wilfred W. Lufkin, Michael F. Phelan, Frederick W. Dallinger, Alvan T. Fuller, Peter F. Taguer, George Holden Tinkham, James A. Gallivan, Robert Luce, Richard Olney, William S. Greene, Joseph Walsh.

MICHIGAN.—SENATORS: Charles E. Townsend, Truman H. Newberry. REPRESENTATIVES (Republicans, 12; Democrat, 1): Frank E. Doremus, Earl C. Michener, J. M. C. Smith, Edward L. Hamilton, Carl E. Mares, Patrick H. Kelley, Louis C. Cramton, Joseph W. Fordney, James C. McLaughlin, Gilbert A. Currie, Frank D. Scott, W. Frank James, Charles A. Nichols.

MINNESOTA.—SENATORS: Knute Nelson, Frank B. Kellogg. REPRESENTATIVES (Republicans, 8; Independent, 1; Independent Republican, 1): Sydney Anderson, Franklin F. Ellsworth, Charles R. Davis, OSCAR E. KELLER, Walter H. Newton, Harold Knutson, Andrew J. Volstead, WILLIAM L. CARSS, Halvor Steenerson, Thomas D. Schall.

MISSISSIPPI.—SENATORS: John Sharp Williams, Pat Harrison. REPRESENTATIVES (Democrats, 8): Ezekiel S. Candler, Hubert D. Stephens, Benjamin G.

Humphreys, Thomas U. Sisson, William W. Venable, Paul B. Johnson, Percy E. Quinn, James W. Collier.

MISSOURI.—SENATORS: James A. Reed, Selden P. Spencer. REPRESENTATIVES (Republicans, 5; Democrats, 11): Milton A. Romjue, William W. Rucker, Joshua W. Alexander, Charles F. Booher, William T. Bland, Clement C. Dickinson, Samuel O. Major, William L. Nelson, Champ Clark, Cleveland A. Newton, William L. Igoe, Leonidas C. Dyer, Marion E. Rhodes, Edw. D. Hays, Isaac V. McPherson, Thomas L. Rubey.

MONTANA.—SENATORS: Henry L. Myers, Thomas J. Walsh. REPRESENTATIVES (Republican, 1; Democrat, 1): John M. Evans, Carl W. Riddick.

NEBRASKA.—SENATORS: Gilbert M. Hitchcock, George W. Norris. REPRESENTATIVES (Republicans, 6): C. Frank Reavis, Albert W. Jefferies, Robert E. Evans, Melvin O. McLaughlin, William E. Andrews, Moses P. Kinkaid.

NEVADA.—SENATORS: Key Pittman, Charles B. Henderson. REPRESENTATIVE (Democrat, 1): At large, Charles E. Evans.

NEW HAMPSHIRE.—SENATORS: George H. Moses, Henry W. Keyes. REPRESENTATIVES (Republicans, 2): Sherman E. Burroughs, Edward H. Wason.

NEW JERSEY.—SENATORS: Joseph S. Frelinghuysen, Walter E. Edge. REPRESENTATIVES (Republicans, 7; Democrats, 5): William J. Browning, Isaac Bacharach, Thomas J. Scully, Elijah C. Hutchinson, Ernest R. Ackerman, John R. Ramsey, Amos H. Radcliffe, Cornelius A. McGlennon, Daniel F. Minahan, Frederick R. Lehlbach, John J. Eagan, James A. Hamill.

NEW MEXICO.—SENATORS: Albert B. Fall, Andrieus A. Jones. REPRESENTATIVE (Republican, 1): At large, Benigno C. Hernandez.

NEW YORK.—SENATORS: James W. Wadsworth, Jr., William M. Calder. REPRESENTATIVES (Republicans, 24; Democrats, 19): Frederick C. Hicks, Chas. Pope Caldwell, John MacCraty, Thomas H. Cullen, John B. Johnston, Frederick W. Rowe, James P. Mahie, William E. Cleary, David J. O'Connell, Reuben L. Haskell, Daniel J. Riordan, Henry M. Goldfogle, Christopher D. Sullivan, Fiorello H. LaGuardia, Peter J. Dooling, Thomas F. Smith, Herbert C. Pell, Jr., John F. Carow, Joseph Rowan, Isaac Siegel, Jerome F. Donovan, Anthony J. Griffin, Richard F. McKintire, James V. Ganly, James W. Husted, Edmund Platt, Charles B. Ward, Rollin B. Sanford, James S. Parker, Frank Crowther, Bertrand H. Snell, Luther W. Mott, Homer P. Snyder, William H. Hill, Walter W. Magee, Norman J. Gould, Alanson B. Houghton, Thomas B. Dunn, Archie D. Sanders, S. Wallace Dempsey, Clarence MacGregor, James M. Mead, Daniel A. Reed.

NORTH CAROLINA.—SENATORS: Furnifold M. Simmons, Lee S. Overman. REPRESENTATIVES (Democrats, 9; vacancy, 1): John H. Small, Claude Kitchen, Samuel M. Brinson, Edward W. Pou, Charles M. Steadman, Hannibal L. Godwin, Leonidas D. Robinson, Robert L. Doughton, Zebulon Weaver.

NORTH DAKOTA.—SENATORS: Porter J. McCumber, Asle J. Gronna. REPRESENTATIVES (Republicans, 3): John M. Baer, George M. Young, James H. Sinclair.

OHIO.—SENATORS: Atlee Pomerene, Warren G. Harding. REPRESENTATIVES (Republicans, 14; Democrats, 8): Nicholas Longworth, A. E. B. Stephens, Warren G. Harding, Benjamin F. Wooty, Charles J. Thompson, Charles C. Kearns, Simon D. Fess, R. Clint Cole, Isaac E. Sherwood, Israel M. Foster, Edwin D. Ricketts, Clement Brumbaugh, James T. Begg, Martin L. Davey, C. Ellis Moore, Roscoe C. McCalloch, William A. Ashbrook, Frank Murphy, John G. Cooper, Charles A. Mooney, John J. Babka, Henry I. Emerson.

OKLAHOMA.—SENATORS: Thomas P. Gore, Robert L. Owen. REPRESENTATIVES (Republicans, 2; Democrats, 6): Everett B. Howard, William W. Hastings, Charles D. Carter, Tom D. McKeown, John W. Harrell, Scott Ferris, James V. McClintic, Dick T. Morgan.

OREGON.—SENATORS: George E. Chamberlain, Charles L. McNary. REPRESENTATIVES (Republicans, 3): Willis C. Hawley, Nicholas J. Sinnott, Clifton N. McArthur.

PENNSYLVANIA.—SENATORS: Boies Penrose, Philander C. Knox. REPRESENTATIVES (Republicans, 28; Democrats, 7; Independent Republican, 1): At large, William J. Burke, Thomas S. Crago, Mahlon M. Garland, Anderson H. Walters, William S. Vare, George S. Graham, J. Hampton Moore, George W. Edmonds, Peter E. Costello, George P. Darrow, Thomas S. Butler, Henry W. Watson, W. W. Griest, Patrick McLane, John J. Casey, John Reber, Arthur G. Devall, Louis T. McFadden, Edgar R. Kiess, John V. Leisher, Benjamin K. Focht, Aaron S. Kreider, John M. Rose, Edward S. Brooks, Evan J. Jones, John H. Wilson, Samuel A. Kendall, Henry W. Temple, Milton W. Shreve, Henry J. Steele, Nathan L. Strong, Willis J. Hulings, Ste-

phen G. Porter, *M. OLYDE KELLY*, John M. Morin, *Guy E. Campbell*.

RHODE ISLAND.—SENATORS: LeBaron B. Colt, *Peter G. Gerry*. REPRESENTATIVES (Republicans, 3): Clark Burdick, Walter R. Stines, Ambrose Kennedy

SOUTH CAROLINA.—SENATORS: *Ellison D. Smith*, *Nathaniel B. Dial*. REPRESENTATIVES (Democrats, 7): *Richard S. Whaley*, *James F. Byrnes*, *Fred H. Dominick*, *Samuel J. Nicholls*, *William F. Stevenson*, *Philip H. Stoll*, *Edward O. Mann*.

SOUTH DAKOTA.—SENATORS: Thomas Sterling, *Edwin S. Johnson*. REPRESENTATIVES (Republicans, 2; Democrat, 1): *Charles A. Christopherson*, *Royal O. Johnson*, *Harry L. Gandy*.

TENNESSEE.—SENATORS: *John K. Shields*, *Kenneth McKellar*. REPRESENTATIVES (Republicans, 2; Democrats, 8): *Sam R. Sells*, *J. Will Taylor*, *John A. Moon*, *Cordell Hull*, *Ewin L. Davis*, *Joseph W. Byrns*, *Lemuel P. Padgett*, *Thelus W. Sims*, *Felix J. Garrett*, *Hubert F. Fisher*.

TEXAS.—SENATORS: *Charles A. Culberson*, *Morris Sheppard*. REPRESENTATIVES (Democrats, 18): *Eugene Black*, *John O. Boz*, *James Young*, *Sam Rayburn*, *Halton W. Sumners*, *Rufus Hardy*, *Clay Stone Briggs*, *Joe H. Eagle*, *Joseph J. Lanham*, *James P. Buchanan*, *Tom Connally*, *Fritz G. Lanham*, *Lucian W. Parrish*, *Carlos Bee*, *John N. Garner*, *C. B. Hudspeth*, *Thomas L. Blanton*, *Marvin Jones*.

UTAH.—SENATORS: *Reed Smoot*, *William H. King*. REPRESENTATIVES (Democrats, 2): *Milton H. Wellington*, *James H. Mays*.

VERMONT.—SENATORS: *William P. Dillingham*, *Carroll S. Page*. REPRESENTATIVES (Republicans, 2): *Frank L. Greene*, *Porter H. Dale*.

VIRGINIA.—SENATORS: *Claude A. Swanson*, *Carter Glass*. REPRESENTATIVES (Republican, 1; Democrats, 9): *Schuyler O. Bland*, *Edward E. Holland*, *Andrew J. Montague*, *Walter A. Watson*, *Edward W. Saunders*, *James P. Woods*, *Thomas W. Harrison*, *R. Walton Moore*, *C. Bascom Slemp*, *Henry D. Flood*.

WASHINGTON.—SENATORS: *Wesley L. Jones*, *Miles Poindexter*. REPRESENTATIVES (Republicans, 5): *John F. Miller*, *Lindley H. Hadley*, *Albert Johnson*, *John W. Summers*, *J. Stanley Webster*.

WEST VIRGINIA.—SENATORS: *Howard Sutherland*, *Davis Elkins*. REPRESENTATIVES (Republicans, 5; Democrat, 1): *M. M. Neely*, *George M. Bowers*, *Stuart F. Reed*, *Harry C. Woodyard*, *Wells Goodykoontz*, *Leonard S. Echols*.

WISCONSIN.—SENATORS: *Robert M. La Follette*, *Irvine L. Lenroot*. REPRESENTATIVES (Republicans, 10; vacancy, 1): *Clifford E. Randall*, *Edward Voigt*, *James G. Monahan*, *John C. Kleczka*, *Florian Lampert*, *John J. Esch*, *Edward E. Browne*, *David G. Classon*, *James A. Frear*, *Adolphus P. Nelson*.

WYOMING.—SENATORS: *Francis E. Warren*, *John B. Kendrick*. REPRESENTATIVE (Republican, 1): *Atlarke*, *Frank W. Mondell*.

ALASKA.—*George B. Grigsby*

CABINET CHANGES. The second resignation from President Wilson's official family since the signing of the armistice was announced on January 13th, when the White House made public correspondence between President Wilson and Attorney-General Gregory, showing that the latter would quit the Department of Justice on March 4th, after a little more than four years of service as Attorney-General. Like Mr. McAdoo, who resigned as Secretary of the Treasury, Mr. Gregory, who had been attached to the Department of Justice for nearly six years, first as special assistant to the Attorney-General, and later as Attorney-General, pleaded pecuniary responsibilities as the reason for leaving the cabinet. It was understood at the time that Mr. Gregory, like Mr. McAdoo, intended to resume the practice of law. Mr. Gregory's letter was dated January 9th, and the President's reply was cabled from Paris on the next day. Mr. Gregory's letter follows:

Dear Mr. President:

In accordance with the purpose expressed in our conversation just before you went abroad, I tender my resignation as Attorney-General. It has been not quite six years since I became connected with your Administration, and more than four years ago, a few days after war was declared by the European nations, I became a member of the cabinet. It can be fairly said that during no other six years in the history of our country have so many great problems been presented and solved. The reflection that at such a time I have been permitted to stand by your side, and assist in a modest way in dealing with these national and international issues, is now, and will always be, my greatest source of pride. No man ever served a leader who was more uniformly considerate, more kindly helpful, and more generously appreciative. No subordinate was ever more deeply grateful for the numberless friendly words and acts of his superior. Pecuniary responsibilities of a substantial nature rest upon me, and my private affairs have long demanded attention.

During the continuation of actual warfare I did not feel at liberty to weigh these personal considerations in the balance against the public duties with which I was charged. By March fourth of the present year the Department of Justice will have substantially brought its war activities to a close and be working under normal

conditions. I therefore ask that this resignation take effect on that date.

Faithfully yours,
THOMAS W. GREGORY.

In response to this President Wilson cabled from Paris:

My dear Attorney-General:

It is with profound reluctance and regret that I accept your resignation. I do so only because you have convinced me that it is necessary in your own interests to retire. There has been no one with whom I have been associated in Washington whom I have learned more to trust, nor to whose counsels I have attached more value and importance. Your administration of your office has been singularly able and singularly conscientious and watchful of the public interest, and I feel that it is a very serious loss to the nation that you should find yourself obliged to withdraw from public life. My best wishes not only, but my affectionate friendship will follow you into retirement, and I hope with all my heart that in some way and at some time, I shall again have the privilege and benefit of being associated with you.

Cordially and faithfully yours,
WOODROW WILSON.

On February 27th, President Wilson nominated A. Mitchell Palmer to the office of Attorney-General to succeed Mr. Gregory. At this time Mr. Palmer was Alien Enemy Property Custodian and because of this some opposition arose to him in the Senate. It was alleged that he had used his office to give political positions to Democrats, and had not handled the affairs of his office with impartiality. He denied these accusations and asked for the fullest investigation of his office. The chief opposition to Mr. Palmer came from Senator Frelinghuysen of New Jersey and Senator Calder of New York. On March 1st, the Senate Judiciary Committee voted unanimously for a favorable report on the confirmation of Mr. Palmer. Owing to a filibuster on a small scale over the oil lands leasing bill, the Senate adjourned without confirming Mr. Palmer's appointment. This was almost an unprecedented action on the part of the Senate. Ordinarily the Senate confirms the President's selection for a cabinet position with the least possible delay. On March 5th, Mr. Palmer was sworn in as a recess appointment to the position of Attorney-General by Chief Justice White of the Supreme Court.

Mr. Palmer's appointment was not confirmed by the Senate until the last week in August. He was born in Stroudsburg, Pa., on May 4, 1872. He was graduated from Swarthmore College in 1891, with the highest honors in his class. He was admitted to the bar in Pennsylvania in 1893. He was a delegate to the Democratic National Conventions in 1912 and 1916. He was elected to the 61st, 62d, and 63d Congresses; declined appointment as judge of the Court of Claims; and in October, 1917, was appointed to the position of Alien Enemy Property Custodian, which office he resigned on Mar. 5, 1919, to assume the duties of Attorney-General.

The third resignation from President Wilson's cabinet since the signing of the armistice was that of William C. Redfield, Secretary of Commerce. His resignation was handed to President Wilson and accepted, according to an official announcement made September 1st. The reason that Mr. Redfield gave for his resignation was that he felt it necessary to go back to private life because his personal affairs needed attention after his long absence from them. He had been a member of the cabinet for six years. It was said at Washington that the friction between

Mr. Redfield and Mr. Walker D. Hines, the Director-General of Railroads, over steel prices last spring may have had a bearing on the resignation. Ever since that disagreement occurred, rumors that it was impending had been reported, one after the other, at frequent intervals. The controversy between Mr. Redfield and Mr. Hines occurred when the Secretary organized an Industrial Board to settle upon fair prices for necessities. Price agreements were made by the Board with manufacturers of various commodities, including steel. However, when the time came for Director-General Hines to purchase steel rails for the railroads, he considered the Board's prices too high. Considerable acrimony developed in the course of the discussion of the matter. At last it was referred to President Wilson who was then in Paris. There was never an authoritative announcement of the outcome, but the Industrial Board did not long survive and Mr. Hines purchased steel rails on the open market through the medium of competitive bids. The Secretary denied that his resignation was brought about by disagreement. He said "My resignation is not the result of any quarrel, disagreement, chagrin or any unpleasant occurrence, but is caused solely and entirely by my desire to return to business and give my attention to my personal affairs, which for more than eight years have been subordinate to the public interest." Mr. Redfield stated that he expected to go to New York City, but that he had not made any definite plans for his immediate future in the business world. He was at one time connected with Hoe and Company, the printing press manufacturers, and afterward manufactured iron and steel forgings. When he became a member of President Wilson's cabinet in 1913 he was Vice-President of the American Blower Company, and a director of the Equitable Life Insurance Society. He was also President of the American Manufacturers' Export Association. He made industrial studies in Europe in 1900 and 1907, and in 1910-1911 made a trip around the world, later writing a book on his observations, entitled *The New Industrial Day*. Mr. Redfield was succeeded by Joshua Willis Alexander, Representative from the Third Congressional District of Missouri. He was graduated from Christian University in 1872, 20 years after his birth. He studied law and was admitted to the bar of Missouri in 1875. He was elected to the 60th, 61st, 62d, 63d, 64th, 65th, and 66th Congresses.

The fourth resignation from President Wilson's cabinet after the signing of the armistice was that of Secretary of the Treasury Glass. He had succeeded Mr. McAdoo to the Treasury position in December, 1918. He resigned late in the year in order to fill the vacancy in the United States Senate caused by the death of Senator Thomas S. Martin (q.v.). There was considerable comment at the time of his resignation to the effect that his appointment to the Senate would bring another strong administration man to the support of the treaty fight.

POLITICAL PARTIES

The year 1919 was a comparatively quiet year as far as the history of national political parties is concerned. There were no national elections, with the exception of one or two by-elections to fill vacancies. The States that held elec-

tions were very few, as is customary in an odd-numbered year. (Almost 40 States hold their elections in even-numbered years.) The energies of the Republican and Democratic parties were spent in preparing for the coming national election in 1920. No definite issues appeared, with the possible exception of the Peace Treaty in general and the League of Nations in particular. The Chairman of the Democratic National Committee announced that the chief issue of the campaign in 1920 would be the League of Nations. This issue was forced upon the country, according to many Democrats of prominence, because of the failure of the Republican majority in the Senate to ratify the Peace Treaty. The Socialist Party was in a state of chaos on account of the many splits that occurred in it. The radical element, the so-called "Left Wingers" broke away from the main body and formed the Communist Labor Party. The "Right Wing" continued to control the organization of the party and used this control to some extent to weed out the Left Wing. This cleavage in the party was very confusing to the public at large, as well as to many politicians and State and national officials. This resulted in the layman getting the general idea that the Socialist party stood for Bolshevism, a rather loosely defined term that came to mean anything from government ownership of public utilities to "direct action," the forcible seizure of industries and the overthrow of the government by violence. Another event of the year was the entrance of organized labor into the field of politics for the first time since the Knights of Labor died out and the American Federation of Labor was established. A National Labor Party was established at Chicago and various local labor parties were organized throughout the various States and in the large cities.

Republican Party. The Republican National Committee held its first meeting of the year in Chicago on January 10th and 11th. It declared in favor of universal female suffrage by constitutional amendment, and applauded speeches condemning Socialism, Bolshevism, and government ownership. The committee practically gave Will H. Hays, the chairman, power to conduct the affairs of the party at the next national election in November, 1920. Resolutions lauding ex-President Roosevelt, who had died only a short time before, were adopted, and plans were made to erect a permanent national monument by popular subscription. The Democratic national administration was bitterly attacked and denounced by committeemen for its socialistic tendencies, and for the placing of the control of the departments of the government in the hands of the minority of the South, while the majority of the North paid 90 per cent of the taxes. Mrs. Medill McCormick, of Illinois, Chairman of the Women's Executive Committee, read a long report, outlining plans for women's organizations in every State, and for the active participation of women in the affairs of the party. Governor Beeckman of Rhode Island referred to the recent elections of the Republicans in the congressional by-elections, and remarked about the southern minority spending the money collected from the northern majority. Among the other prominent speakers were Governor Burnquist of Minnesota, Governor Harding of Iowa, and Representative Royal Johnson, who appeared in the uniform of an army officer.

In speeches and conferences held in the "Twin Cities" of Minneapolis and St. Paul, Chairman Hays opened the Republican campaign for national victory in 1920. Supreme nationalism was the keynote of the Republican leader's speeches. He said, "While we seek earnestly and prayerfully for methods of lessening future wars, and will go far indeed in an honest effort to that end, we will accept no indefinite internationalization as a substitute for fervent American nationalism." This was his stand on the League of Nations questions in addressing the northwest rally. United States Senator Frank B. Kellogg reviewed Republican achievements during the war and expressed hope for amendments for the present League of Nations draft. Governor J. A. Burnquist, in welcoming the Chairman of the Republican National Committee, confined himself almost entirely to an attack on George Creel, Chairman of the Committee on Public Information.

On March 11th, the Republican leaders turned their attention to the selection of majority leaders and members of the various committees of the House of Representatives for the new 66th Congress. Representative Gillett of Massachusetts was selected as the majority candidate for speaker. This selection by the majority party meant virtual election. James R. Mann was the logical candidate, but, according to some, he had been too closely associated with "Cannonism" to be a desirable candidate. Frank W. Mondell of Wyoming, a veteran member of the House, and considered an extreme reactionary, was named floor leader (carrying with it the chairmanship of the Ways and Means Committee), after Representative Mann had declined the honor. The Committee on Committees, which is ordinarily composed of the members of the Ways and Means Committee, was supplanted by a Steering Committee. This Steering Committee was completely dominated by the "Old Guard," led by Uncle Joe Cannon and Mr. Mann. The entire slate of appointments was jammed through, and committee appointments were made in accordance with the seniority rule. Mr. Mann, after declining to accept the floor leadership, refused to take a committee assignment. This would leave him free to be the actual master of the House, while his supporters, the newly named floor leader, and the Steering Committee might do his bidding. On March 30th Representative Longworth, the virtual leader of the Progressive Republicans in the House, declared in a statement that the control of the Republican policies was in the hands of the Mann-controlled Committee on Committees, and that he (Longworth) and his followers would renew their demand for an enlargement of the Steering Committee, so as to include representatives of labor, the progressive element, and the West. Mr. Longworth said the power of the Steering Committee was greater than that once held by the then Speaker of the House, Uncle Joe Cannon, and the committee, in his opinion, would override the Speaker in the determination of legislation and decide the course of the Republican party in the House, thereby outlining the policies of the presidential campaign of 1920. Mr. Longworth appealed to the Republicans of the House to support him and his band of progressives in their fight to enlarge the size of the Steering Committee. He said the fight would be carried to the next Republican caucus

to be held a week before the next House organized. When the House was organized before the meeting of the special session called by President Wilson from Europe, Mr. Longworth was unsuccessful in fighting the "Old Guard" programme and everything went through the way the Steering Committee had arranged.

There gradually developed a strong opposition to Mr. Mondell's leadership. At the time the daylight saving bill was up before the House this feeling reached its height. Many Republicans bolted from his stand on the matter and voted with the Democrats for the repeal of the measure.

The Republican National Committee met in Washington during the second week in December in order to decide the time and place for holding the National Convention for the purpose of nominating a presidential candidate. Chicago was chosen, and June 8th was the date selected. An innovation was adopted inasmuch as a platform committee was selected half a year in advance of the convention. This was done because of the unusual character of the campaign and the vital issues involved in the election of 1920. The meeting brought together many leaders from all parts of the country, including many Congressmen and Senators. The number of women present caused considerable comment and showed the tremendous political change that had swept the country in the last year or two. The principal speakers were Governor Sproul of Pennsylvania, Governor McKelvie of Nebraska, and Mrs. Medill McCormick of Illinois.

The year was pregnant with presidential booms throughout the Republican ranks. The death of former President Roosevelt (q.v.) in January, caused a complete upset in the plans of the Republican party. Had he lived it seemed almost certain that he would have been the candidate for president in 1920. Even the "Old Guard," as the standpaters and reactionaries were called, had apparently forgotten his defection from the party in 1912, and had come out and hailed him as the choice of a united party in the coming election. Upon his death chaotic conditions reigned in the ranks of the party, largely on account of the difficulty of picking a successor. Among the various names mentioned at that time were Senator Knox of Pennsylvania, Roosevelt's choice as a compromise candidate between himself and Hughes in 1916, Senator Harding of Ohio, and Major-General Leonard Wood. Others mentioned were Senators Borah of Idaho and Johnson of California, and Mr. Taft and Mr. Hughes.

Republican women were officially welcomed into that party at a dinner held in Washington under the auspices of the Women's Executive Committee. The newly chosen Speaker of the House, Mr. Gillett, Will Hays, Chairman of the National Committee, and Senator Cummins, Chairman of the Senate Committee of Interstate Commerce, all welcomed them in, and emphasized very strongly equality for all holders of the ballot. The Women's Committee decided that there was to be no separate women's organization formed within the party.

The Cincinnati *Enquirer* took a poll of Congress to determine the choice of both houses for the Presidential candidate in 1920. The question asked was "Who, in your opinion, will be the nominee of the Republican Party in 1920?" The result in the House of Representatives was as

follows: Wood, 116; Lowden, 41; Watson, 23; Harding, 22, and Johnson, 6, with several scattering. In the Senate the vote was Wood, 20; Harding, 4; Johnson, 4; Watson, 3.

In the State elections held in November one of the most important was the reelection of Governor Coolidge, of Massachusetts by the largest majority ever given to a Governor of that State. The issue was one of "law and order." This issue arose over the Boston police strike which was put down by the State militia, called out by Governor Coolidge. His platform was anti-strike, while that of his opponent favored the strikers. The victory of the "law and order" candidate was everywhere hailed throughout the country. President Wilson sent the Governor his congratulations.

Democratic Party. Vance McCormick, Chairman of the Democratic National Committee, resigned his position in January, 1919. He was in Paris at the time of his resignation and stated that the cause of it was the fact that he could not satisfactorily carry on the duties to which he had been assigned by President Wilson with the American Peace Commission, and at the same time carry on the work of the national committee. His position with the American Peace Commission was as Chairman of the War Trade Board. His resignation came as a complete surprise to official and political Washington, although it had been known by some of his closest friends. He said in his letter:

It is with keen regret that I am compelled to take this action, as I had hoped upon the conclusion of the war to be able to again resume active control of the committee's affairs, but this I find now impossible to do, and as it is most important that the organization work of the committee should be vigorously prosecuted, I feel in justice to the committee, I should take this step.

I want to take this opportunity of expressing to you my deep appreciation for the hearty cooperation you have always accorded me since I assumed the chairmanship of the campaign of 1916. It is with the deepest regret that I am compelled to sever a relationship which has been so full of many delightful associations.

At a meeting of the National Committee held in Washington on February 26th, Homer S. Cummings, of Connecticut, was unanimously elected chairman to succeed Mr. McCormick. At the same meeting a complete reorganization was decided upon for a militant campaign in 1920. J. Bruce Kremer, of Butte, Mont., and Samuel B. Amidon, of Wichita, Kan., were elected Vice-Chairmen; G. E. Hoffman of Fort Wayne, Ind., Secretary; W. R. Hollister, of Jefferson City, Mo., Executive Secretary (succeeding Carter Glass), and W. D. Jamieson of Shenandoah, Iowa, Director of Finance.

A plan for an Associate National Committee of women, proposed by Mrs. George Bass, Chairman of the Women's Bureau of the National Committee, was adopted. Members of the auxiliary committee were to be appointed by the chairman of the National Committee on Nominations, or the committeemen of the various States, until some other method was adopted. The plan also contemplated the election or appointment of a woman as vice-chairman of every State and county committee, and in each Congressional district, and the selection of a committeewoman in each State Senatorial district, town, ward, or precinct, as associates of the male officials in those subdivisions.

A resolution favoring the enfranchisement of women through the adoption of an amendment

to the Federal constitution was adopted by a vote of 28 to 10, after a spirited debate. The resolution was proposed by Senator Jones of New Mexico, Chairman of the Women's Suffrage Committee in the Senate, who urged the committee to back the suffrage amendment, and prevail upon Democratic Senators, generally, to vote for it before the adjournment of Congress. J. Bruce Kremer, of Montana, joined Senator Jones in advocating action. Senator Saulsbury, of Maryland, General Haidman of Kentucky, and A. J. Mullen, of Nebraska opposed the resolution. They indicated a willingness to have women vote if the State should so decree, but they objected to enfranchisement through a Federal amendment. The resolution extending a greeting to President Wilson, upon his return from France, read as follows:

RESOLVED, That we, the members of the Democratic National Committee do hereby extend to President Wilson our hearty greeting upon his safe return, and tender to him and to the country our congratulation upon his great achievements in behalf of a just and enduring peace. We call upon all good citizens, irrespective of political affiliation, to support the efforts which he is making here and abroad in behalf of a world peace supported by all civilized governments. We congratulate him as commander-in-chief of the army and navy, and the officers and men of all branches of the service, upon the triumph of American arms in the greatest conflict known in history. We deprecate the attempts which are being made in various quarters to minimize the glory rightfully belonging to America, and to tarnish the honor of the army and navy by unwarranted attacks upon the Administration and upon the agencies of the nations, by means of which these great results have been achieved.

All the members of the National Committee which had been in session were the guests of the President and Mrs. Wilson at a luncheon on February 28th. The President gave the members of the committee the impression that he was looking forward to the end of his term on Mar. 4, 1921, and that after that date he contemplated a return to the writing of history. Some of the party leaders seemed to think that the only thing that could possibly induce the President to run a third time would be the defeat of the League of Nations at the hands of the Republican Senators. In a speech on March 14th, Mr. Cummings stated that the issue in 1920 would be the League of Nations. After this statement there was considerable talk of President Wilson as a third term candidate.

On March 18th, the reorganized Executive Committee of the Democratic National Committee, as announced by Mr. Homer S. Cummings, Chairman, was as follows: John Barnett, Colorado; Charles Boeschelstein, Illinois; Dr. John W. Coughlin, Massachusetts; Isidore V. Dockweiler, California; Robert Ewing, Louisiana; Carter Glass, Virginia; Cordell Hull, Tennessee; Senator A. A. Jones, New Mexico; Frederick B. Lynch, Minnesota; Norman E. Mack, New York; W. W. Marsh, Iowa; E. H. Moore, Ohio; A. F. Mullen, Nebraska; A. Mitchell Palmer, Pennsylvania, and former Senator Willard Saulsbury, Delaware.

At another meeting of the Democratic National Committee, Mr. Cummings again reiterated the statement that the League of Nations was going to be the main issue in 1920. The following resolution was passed:

We, the Democratic National Committee, recognizing the splendid service being rendered by President Wilson in behalf of a just and enduring peace, extend to him our heartfelt good wishes and congratulations, and be it

RESOLVED, That we do hereby record ourselves in favor of the prompt ratification by the Senate of the Treaty of Peace, including the covenant of the League of Nations.

At a meeting held in Atlantic City on September 26th and 27th a resolution was adopted calling on the States to ratify as soon as possible the Federal Woman Suffrage amendment. Other topics discussed were, how to raise funds for the national campaign in 1920, and how to get the new voters interested in the affairs of the party. At a later meeting it was determined to hold the Democratic National Convention of 1920 in San Francisco.

The most interesting State election, in which the Democrats were victorious, was the one held in New Jersey. Mr. Edwards, Democrat, ran on a strong anti-prohibition ticket and was elected. As a result of his success he was often mentioned as a possible candidate for the Presidency, on a "wet" platform in 1920. In the elections in New York City, Tammany Hall suffered one of the worst defeats in its history. Former Congressman La Guardia, running on a straight Republican ticket defeated his Democratic rival for the position of President of the Board of Aldermen, as did the Republican candidate for President of the Borough of Manhattan, Mr. Curran.

National Labor Party. The first annual convention of the National Labor Party was held the last week in November, 1919, at Chicago. John Fitzpatrick of Chicago addressed the convention in behalf of the organized workers of Chicago. He explained the necessity for action to meet the problems of the present day, and expressed the hope that out of the convention would result a new and better day for those who toil. A constitution was adopted which said among other things that the object of the labor party "shall be to organize all hand and brain workers of the United States, in the principles of Political, Social, and Industrial Democracy. . . . Trade Unions, farmer organizations, coöperative societies, and other organizations subscribing to the principles of the Party, may affiliate with the State or County Labor Party by paying the required per capita tax. . . . All workers over 16 years of age, without regard to race, color, sex or creed, and who subscribe to the principles of the Labor Party, are eligible to membership."

Some of the declarations of principles on which the party was founded are as follows: a league of the workers of all nations pledged and organized to enforce the destruction of autocracy, militarism, and economic imperialism throughout the world; . . . complete restoration at the earliest possible moment, of all political rights—free speech, free press, free assemblage, and the freedom of all persons imprisoned for insisting upon the exercise of these rights; industrial and political equality of the sexes; abolition of "government by injunction," which never had a legal existence in American history; the abolition of the middle men and wasteful methods of distribution of commodities; all public utilities and natural resources must be restored to the people; the Federal government must take over the banking business of the country, inasmuch as the private bank is the citadel of special privilege; education must be democratized and a real free system of public education adopted; amendments proposed by Congress must

be ratified by referendum, and the people given the power to initiate their own amendments; a national budget system; abolition of child labor; and the performance of all government work by the government rather than by contract.

American Labor Party of Greater New York. To meet the great problems brought up by the sudden termination of the war, organized labor of New York City, as represented by the Central Federated Union of New York City, the Central Labor Union of Brooklyn, and the Women's Trade Union League, appointed committees on reconstruction. After a careful study of the problem, the reconstruction committees came to the conclusion that not only did the existing laws make impossible the carrying out of a thorough-going and effective programme of reconstruction, but that the dominant political parties were either unable or unwilling to meet the emergency created by the cessation of hostilities and the problems of demobilization. Organized labor was therefore forced to enter the field of political activity. The result was the birth of the American Labor Party. On Jan. 11, 1919, the combined reconstruction committees called a convention of representatives of organized labor. At this convention, which lasted two days, there were present 884 delegates representing the Central Federated Union, the Brooklyn Central Labor Union, and the Women's Trade Union League, as well as 152 locals, 41 international unions, the United Hebrew Trades and the United Board of Business Agents of the Building Trades. A platform was drawn up which comprises most of the planks adopted by the National Labor Party mentioned above. Some candidates were entered in the election of November, but the results were rather insignificant.

Socialist Party. One of the most interesting events of the year in Socialist party circles was the case of Victor Berger. Victor Berger, politician and publisher, and only Socialist elected to the 66th Congress, was found guilty by a jury in a Federal Court of sedition and disloyalty, under the Espionage Act. Convicted with him were Adolph Germer, National Secretary of the Socialist party; William F. Kruse, National Secretary of the Young People's Socialist League; J. Louis Endahl, editor of the *American Socialist*, and Irwin St. John Tucker, a Protestant Episcopal minister and former newspaper man. The men were released under \$10,000 bail. They had been indicted in February, 1918, following raids on Socialist headquarters and the denial of the second-class mailing privileges to Berger's paper and the national party organ, the *American Socialist*. The trial started on Dec. 9, 1918. In 25 overt acts cited in the indictment the defendants were accused of willfully obstructing the recruiting and enlistment service of the nation while it was at war, through pamphlets, speeches, cartoons, and other means of propaganda, and with causing insubordination, disloyalty, and refusal of duty in the military and naval forces.

On February 10th, the defendants were sentenced to 20-year terms in a Federal prison. They all gave notice of appeal to the United States Court of Appeals and soon afterward were taken before Judge Altschuler, who fixed bail at \$25,000. This permitted them their liberty, but the Judge put upon them the restraint that they were to remain silent until their cases

were finally disposed of. Berger was denied his seat in the House of Representatives, and a new election was held in his district in Wisconsin. Despite a fusion of candidates on the part of the Republicans and Democrats, and the injection of the pro-Germanism versus Americanism issue into the campaign, Berger was again elected by a fair sized majority. He was again denied his seat in the House of Representatives, and when the year closed the people of his district were without representation in the lower branch of Congress.

At a meeting of the National Executive Committee of the Socialist party held in Chicago in May, 25,000 Slavic Socialists were expelled from the party and the Michigan group of Socialists were sent after them. Those expelled were members of the so-called "left wing," who apparently had no idea whatever of obeying the party platform. They believed in the Soviet, direct action, and the immediate seizure of industry, while the party platform indorses all social reform as it can be gained. After this action the committee decided to call the Socialist National Convention for August 30th, and to start nationwide meetings, on July 4th, to demand Eugene Debs's release from prison. On May 30th, the last day of the meeting, the Peace Treaty with Germany was bitterly attacked as a "peace of hate" and a "hideous farce."

A national convention of the "Left Wing" (radical) Socialists was held in New York during the week of June 21, 1919. Resolutions were adopted proposing a national strike to compel the release of Mooney, Debs, Haywood, and other agitators in prison. Another resolution pledged the "Left Wing" Socialists to determined resistance to armed intervention in Mexico. An attempt was made to read out of the party all intellectuals and people who had money. This failed on account of the opposition of those who claimed that this would bar men of the type of Lenin and Trotsky from membership. Among the other resolutions adopted was one providing for a "Left Wing" paper, to be known as the *Worker* and to be controlled by the National Council which was created at the meeting, with such prominent radicals as John Reed, Benjamin Gitlow and "Jim" Larkin. The latter two were tried and convicted on the charge of criminal anarchy. The convention provided for a national convention to be held in Chicago on September 1st, which it was expected would be a "rump" convention in the event that the "Left Wing" should fail in their avowed purpose of capturing the machinery of the Socialist party for the foreign federations, whose charters had been annulled, and for the "Third Internationale." See SOCIALISM.

At the national convention of the Socialist party held in Chicago on August 30th, et seq., strife developed in the ranks, which ultimately resulted in a split. The struggle began before National Secretary Germer could call the meeting to order. Delegates of the so-called "Left Wing" were put out of the hall by policemen, because, Secretary Germer said, they were trying to pack the convention by seating delegates who had no credentials. Immediately after their expulsion from the convention hall the "Left Wing" supporters, led by John Reed, of New York, held a meeting to decide on a course of action. They proceeded to organize a new Radical Socialist party, which was scheduled to hold

a convention on September 1st. Although many delegates were not clear as to the difference between the "Left" and "Right" wings of the party, the principal trouble appeared to be that the former wanted a dictatorship of the proletariat, and some even went so far as to suggest the abolition of political action. It was explained that the breach in the party had been widening for some time, and the trouble at the convention was the result of that schism. Many claimed that the "Left Wing" wanted to adopt a programme modeled after the Russian Socialists. The "Left Wing" held sessions with communists with the end in view of amalgamating with them or the formation of a new party.

Three hundred representatives of this "Left Wing" faction organized on September 1st, the *Communist Labor Party of America*, and adopted the emblem of the Soviet Republic of Russia, with the motto, "Workers of the World Unite." The emblem consists of a scythe and a hammer surrounded by a wreath of wheat. A suggestion that a torch be added to the emblem was voted down. Delegate Zimmerman of Indiana led a small minority who wanted the new organization called the Independent Socialist party, but his suggestion was overwhelmingly defeated. The Communist group of ultra radicals which was expelled from the National Socialist party held a meeting in another hall and formed the *Communist Party*. This faction consists of foreign-language Socialists and others who regard the parent body and the "Left Wing" faction as too conservative.

Steps for calling a new International Socialist Congress to unite the radical forces of the world were taken on September 6th, at the closing session of the National Socialist party convention. The plan was to hold the Congress at the earliest date practicable, in either New York or Chicago. The committee on international relations repudiated the Berne International Socialist Congress (see SOCIALISM). Under the terms of the resolution adopted the German Majority Socialists and the factions of the party in other countries which declined to oppose the world war, would be barred from representation. The convention gave qualified indorsement to the Plum plan for the nationalization of railroads, objection being made to the method of acquiring the railroads and the limited representation of classified employees on the board of managers. Another resolution adopted called for changes in State and Federal constitutions to allow the election of Congressmen and general Assemblymen by industrial trade groups, instead of by territorial districts. This follows the Russian Soviet plan. Other resolutions adopted included: A demand for the immediate repeal of the Federal espionage law; a protest against universal military training; a protest against war with Mexico; a demand for a Pan-American Socialist Congress; a protest against deportation of radicals; opposition to any limitation of immigration to the United States. Both branches of the Socialist party adjourned on September 7th, without selecting presidential candidates.

Pursuit of Radicals. A very spectacular investigation of radicals of all descriptions was begun towards the close of the year by a committee headed by Senator Lusk of the upper house of the New York State Legislature. While the investigation was limited to New York State,

the trails ramified all through the country. Ludwig Martens, so-called Ambassador from Russia, was caught in the net, and the charge of being a Bolshevik propagandist was brought against him. He stated that he was a commercial agent only. Raids on radical headquarters and the Rand School of Social Science resulted in the seizure of tons of literature and evidence against radical organizations. The committee had not completed its work when the year closed.

The pursuit of anarchists and radical sympathizers was proceeding at the close of the year in various parts of the country. Thirty-three members of the I. W. W. were brought to trial in the Kansas Federal Court, December 1st, on the charge of attempting to overthrow the government, and more than 25 of them were sentenced, December 18th. In Detroit Federal agents and deputy marshals raided 16 places and took 150 prisoners, December 3d; in Toledo on the same day 100 arrests were made; in Chicago at the end of the year 200 arrests were reported, and similar raids took place in many other cities. In his annual report, December 8th, Attorney-General Palmer declared that the Department of Justice was confronted with "increasingly dangerous radical activities," the amount of information gathered by the Department concerning the "Reds" being already enormous. At the end of November it was learned that the deportation of Emma Goldman and Alexander Berkman had been ordered. At that time 82 prisoners were awaiting deportation at Ellis Island, N. Y. On December 22d, 249 aliens, all of them Russians, were deported on the transport *Buford*, termed by the newspapers the "Soviet Ark," the State Department cabling at the same time to foreign authorities that these persons were "undesirable" and a "menace to law and order." By the close of the year 5000 persons were reported to have been arrested and it appeared from the figures of the Department of Justice that 2635 of these were aliens held on what was believed to be sufficient evidence to warrant deportation.

Committee of Forty-Eight. At a gathering of men and women interested in public affairs held in New York in January, 1919, it was decided that some definite effort should be made to discover the opinion of the people concerning fundamental national issues. The Committee of Forty-eight was the result of this meeting. At a later and larger conference it was decided to issue a call for a national conference. The name Committee of Forty-eight was adopted as representative of the national union of 48 States. The committee stated its purpose in what was known as "A Call to Americans" which was first published as an advertisement in four liberal journals.

On September 22d the Committee fixed the date and place for the National Convention as December 9th to 12th in St. Louis. Over 500 citizens from 38 States met and adopted the following appeal to the American people, platform and resolutions:

To the American People:

The purpose of this Conference is to formulate and present to the American people a program of political action that is honest, workable and fundamental. Such a program must be economic in its nature, since the ills from which the country suffers are largely economic. Reforms in the political machinery itself will not meet the need.

The failure of the government to reduce the high cost

of living, the fact that great numbers of American citizens live in want or fear of want, in spite of the country's immense wealth, the growing control of basic resources and industries by trusts which disregard alike the rights of their employees and of the public, these together constitute a denial of the right to life, liberty and the pursuit of happiness which is the heritage of all American citizens. Hence, there is profound unrest, and the conviction in the minds of earnest citizens that there can be no relief except through real constructive measures.

There is a growing realization, also, that such relief cannot be hoped for through the two old political parties. It has long been a fact, and is now beginning to be recognized, that there is no real difference between these two parties; that both are controlled by the same economic forces; that these economic forces thus constitute an invisible government, not representative of the people, and that our present two-party system leaves the country with no adequate political opposition. The country, in fact, is governed by a political monopoly.

In this situation, it is fair to say that we have reached a deadlock of democracy. We seek, therefore, to open up new channels through which the fundamental demands of the popular will, may find expression in political action, so that the economic contest may not pass into another and more serious phase.

With a view to such political action, we submit a program in the interest of all, irrespective of class, race, sex, or creed, in the hope that it may serve as a means by which the various groups of citizens who have already united in different parts of the country for independent political action, and others who feel as we do, may come together next year, in a new and great successful party.

THE PLATFORM

Public ownership of transportation, including stock yards, large abattoirs, grain elevators, terminal warehouses, pipe lines and tanks. Public ownership of other public utilities and of the principal natural resources, such as coal, oil, natural gas, mineral deposits, large water powers and large commercial timber tracts.

No land (including natural resources) and no patents be held out of use for speculation to aid monopoly. We favor taxes to force idle land into use.

Equal economic, political and legal rights for all, irrespective of sex or color. The immediate and absolute restoration of free speech, free press, peaceable assembly, and all civil rights guaranteed by the Constitution. We demand the abolition of injunctions in labor cases. We endorse the effort of labor to share in the management of industry and labor's right to organize and bargain collectively through representatives of its own choosing.

RESOLUTIONS ADOPTED BY THE CONFERENCE

Whereas, it has come to the knowledge of this Conference that there is immediate danger of the passage by the United States Senate of the Railroad Subsidy Bill, and

Whereas, the spirit and purpose of this Conference are opposed to the class of legislation represented by the Cummins and Esch bills for subsidizing and returning the railroads to private control until a settled policy of the transportation problems of the nation can be determined. Now, therefore, be it

Resolved, that it is the sense of this Conference that no legislation such as is represented in the Cummins and Esch railroad bills, should be enacted at this time; and be it further

Resolved, that we protest against the same, and that the railroads should not be returned within two years from January 1, 1920.

Resolved, that Congress should not declare war or the existence of a state of war unless authorized by vote of the people; except in case of invasion by force, and we recommend the immediate provision by Congress of legal means for determining the sense of the American people in such a contingency.

Resolved, that the spirit of militarism should not be fostered by subjecting our people to universal military training.

Resolved, that the economic blockade of Russia should be lifted at once and all military forces of the United States withdrawn forthwith from Russia.

Resolved, that political prisoners and all imprisoned in violation of their constitutional right of free speech, should be immediately released.

Resolved, that our government should make every effort to secure universal disarmament by international agreement.

FOREIGN RELATIONS. *The Jenkins Case.* During October and November, 1919, the friendly

relations existing between the United States and Mexico were strained almost to the breaking point. The general public of the United States was aroused as it had not been since the time of the Villa raid and its subsequent events. The trouble arose over the seizing and holding for ransom of an American Consular agent, William O. Jenkins, American Consular Agent at Puebla, Mexico, was kidnaped on Oct. 19, 1919, and held for 300,000 pesos ransom, which represents about \$150,000 in American money.

On October 25th, the State department, through its representative in Mexico City, demanded that the Mexican government should immediately bring about the release of Mr. Jenkins. The Embassy was also instructed to ask the Mexican government what it was doing to bring about his release. On the following day Mr. Jenkins was released through arrangements made with the bandits by his attorney. The case seemed settled as far as the United States was concerned, although there were all kinds of rumors abroad concerning the case. Friends of Jenkins claimed that the bandits who kidnaped him were in the direct employ of the Carranza government. Mexicans claimed that Jenkins and his abductor, Cordova, were in collusion, and that the kidnaping was a prearranged affair, the purpose of which was to upset the friendly relations between the United States and Mexico. Several Mexican papers went so far as to say that it was a plot on the part of American capitalists to get armed intervention in Mexico.

On November 17th, the case took an entirely new turn, largely along the lines just described. Jenkins was arrested on the charge that his abduction was a prearranged affair. His attorney, who had made arrangements for the paying of his ransom, had already been arrested on the charge on criminal complicity. Secretary of State Lansing, who apparently handled the entire Jenkins case alone, owing to the illness of President Wilson, made strong protests against this action on the part of the Mexican government. These protests were on the ground that the United States had strong evidence of his innocence. The American Embassy at Mexico City stated further that a complete investigation would be made by the American government.

On November 20th, Secretary Lansing sent a formal note to the Mexican government which demanded the release of Jenkins in no uncertain terms. It also warned the Mexican authorities that any further molestation of Jenkins would "seriously affect the relations between the United States and Mexico, for which the Mexican government must assume sole responsibility." Although this note was not an ultimatum strictly speaking, because it did not contain a time limit, nevertheless its tone was that of a serious threat. The State Department apparently asked the War Department just what steps and how many men, etc., would be necessary in dealing with Mexico. The War Department went over the matter in minute detail, which goes to bear out the semi-ultimatum tone of the note. One of the chief reasons for the note's severity was the fact that the State Department had received from Mr. Jenkins himself, an account of his abduction and his subsequent treatment at the hands of the bandits.

After several days of delay and anxious wait-

BOLSHEVISM IN THE UNITED STATES
Some of New England's alleged "Reds" on their way to Deer Island

ing on the part of the State Department and the general public, the Mexican government finally replied. It refused to release Jenkins on the ground that it was incompatible with Mexican penal laws. The note further stated that the fact that he was in prison did not prove that he was guilty of the charges brought against him, but that he was held on suspicion that they were true. The Mexican Federal government did not have charge of Jenkins, inasmuch as he was under the custody of the State of Puebla, and therefore not under the jurisdiction of the national government. This will remind many of the reply of the United States to Japan when the latter country protested against the land laws of the State of California. The United States said that the national government did not have jurisdiction over that type of laws, as they were left to the individual States. The note also stated that the United States was interfering in this matter, not on legal grounds, but on the grounds of power alone. Foreign nations can only intercede for a citizen when justice miscarries. Another point brought out was the fact that the Mexican government was based on the theory that the three departments of government, executive, legislative and judicial, were entirely separate and distinct. Therefore one cannot interfere with the workings of another, i.e., the executive department cannot order the release of a prisoner who is under the jurisdiction of the judicial department. A new element was brought into the matter when the note charged that Jenkins was guilty of perjury, in that he had sworn to contradictory statements in connection with his arrest and imprisonment.

The note created a great deal of dissatisfaction in Washington and throughout the country in general, the feeling against Mexico running very high. As a result of the charge of perjury, the United States requested Mexico to supply a copy of the indictment and evidence against Jenkins.

The reply to the Mexican note was published on December 1st. It demanded immediate release. It also indicated by its tone a disbelief in the honesty of the prosecution of Jenkins, and stated that the Mexican government's attitude was taken to divert the attention of the American government and public from the fact that Puebla, a large city, was without protection from outlaws. It stated that the Mexican government did have jurisdiction in the case, inasmuch as the Mexican constitution provided that consular cases came under the jurisdiction of the Federal courts, and not under those of the State.

This note apparently had the desired effect, for Mr. Jenkins was released very suddenly on December 4th. This was due in a large measure to the stern stand taken by the United States in the matter, as well as to the fact that an investigation was carried out for the Mexican Federal government by General Gonzalez, who reported to his superiors that several of the peons who had testified against Jenkins had done so on account of intimidation and threats on their lives.

There was one purely American episode that was keenly interesting in connection with the Jenkins affair. Senator Fall, chairman of a committee investigating affairs in Mexico, introduced a resolution demanding that the United

States break off friendly relations with Mexico. The result was the appointment of a committee of two, composed of Senators Fall and Hitchcock, to visit the President and talk over the situation with him. These two Senators visited the President in his sick room and talked the matter over. Although no account was ever published concerning this conference, the turn it took may be gathered from a letter which President Wilson wrote to Senator Fall a few days later. Its tone was very tart. It suggested that the Senate permit the conduct of foreign affairs to remain in the hands of the President, indicating that it was an attempted usurpation of the President's powers.

VISITS OF KING ALBERT AND THE PRINCE OF WALES. Largely as a result of the cordial invitation of President Wilson when he was abroad, the King and Queen of Belgium, with their son, the Duke of Brabant (heir to the throne), paid a visit to the United States and made a triumphal tour of the country. They were everywhere greeted by huge crowds, which were unstinting in their welcome to the royal visitors. They landed in New York on October 2d; visited Boston next, and then Buffalo, whence they made a tour to the Pacific coast. They returned to New York on October 24th; were in Washington from October 24th to the 27th, and sailed for Europe October 31st on the *George Washington*.

The visit of the Prince of Wales covered two weeks, from November 10th, when he crossed the Canadian border at Rouse's Point, N. Y., until the 22d, when he sailed from New York for Halifax on the British battle cruiser *Renown*. His itinerary was, briefly, as follows: November 11th, at Washington, where he met the members of Congress at a reception held in the Congressional Library. November 13th, laid a wreath on the tomb of Washington at Mount Vernon, and called on President Wilson, who received him in bed. November 14th, visited the Naval Academy at Annapolis, and called on Cardinal Gibbons in Baltimore. November 15th and 16th, visited White Sulphur Springs. November 17th returned to New York City, where, on the 18th, he received an official welcome by the city authorities. On the 21st he placed a wreath on Roosevelt's grave at Oyster Bay, planted an elm in Central Park, attended the performance at the Hippodrome, was a guest of the Seventh Regiment, gave a reception to High School pupils on board the *Renown*, and was dined by the Pilgrims. On the 22d he sailed for home via Halifax.

GOVERNMENT OPERATION OF TELEPHONE, TELEGRAPH, AND CABLE SYSTEMS. As was stated in the YEAR BOOK for 1918, the United States government took over all the telephone, telegraph, and cable systems in the United States, and turned them over to Mr. Burleson, Postmaster-General to operate. The telephone and telegraph wires were taken over at 12 o'clock, midnight, of July 31, 1918. A proclamation, signed by the President on November 2d, but not published until after the armistice was signed, announced the taking over of the 16 marine cables, and placing these also in the hands of Mr. Burleson. This caused considerable comment, and was remonstrated against very strongly by Clarence H. Mackay, the President of the Postal Telegraph Commercial Cable Company.

Throughout the first half of 1919, the return of the wires and cables to their former owners

was a subject of a great deal of discussion both by the public and on the floors of Congress. Finally on July 11th, President Wilson signed the bill repealing the act under which the telephones, telegraphs, and cables were taken over. On July 31st, Postmaster-General Burleson issued an order calling for the return at midnight, July 31st, to their respective owners of all telephone, telegraph, and cable systems which had been under government control. The text of the order for the return of the wires is as follows:

POST OFFICE DEPARTMENT,
Washington, July 30, 1919.

Order No. 3380.

In accordance with the act of Congress, approved July 11, 1919, and by direction of the President, all the telegraph and telephone systems, lines, and properties, including all equipment thereof and appurtenances thereto whatsoever, and all materials and supplies taken possession of or received, operated, supervised, or controlled by the Postmaster-General under, and by virtue of, the joint resolution of Congress approved July 16, 1918, and the proclamation of the President, July 22, 1918, are thereby returned and delivered to the respective owners thereof, at midnight on July 31, 1919, and the supervision, possession, control, and operation exercised by the Postmaster-General under, and by virtue of, said joint resolution and proclamation of the President, will cease and terminate at that date and hour. All such telegraph and telephone companies are thereby directed to close their books as of midnight, July 31, 1919, and to proceed promptly to collect all outstanding indebtedness and accounts arising out of the operation of such systems, during the period of government control, and at the earliest practicable time to submit a full account to William H. Lamar, Chairman of the Finance Committee, Wire Control Board. Each company with which a compensation agreement has been entered into or to which compensation has been awarded, will, if its accounts show an excess over and above the compensation allowed, transmit such excess, together with a statement of accounts, within five days after the ascertainment of the amount due, to said William H. Lamar, Chairman of the Finance Committee, Wire Control Board, in the form of a certified check or bank draft, payable to A. S. Burleson, Postmaster-General. All books and accounts kept during the period of government control shall be preserved by the respective companies and shall continue under the control of said William H. Lamar, Chairman of the Finance Committee, and shall at all times be subject to examination by the auditor and accountants of the Control Board. All companies under the control of the government, with which compensation has not been fixed or concluded by agreement or by operation of orders Nos. 2980 and 3175, should at once take up with said William H. Lamar, Chairman of the Finance Committee, Wire Control Board, the matter of the fixing of such compensation, so that the Postmaster-General may make his report to Congress upon the operation of the various wire systems on or before November 1, 1919, as required by law.

A. S. BURLESON,
Postmaster-General.

In commenting upon the return of the wire systems the Postmaster-General said in part:

The labors of the Postmaster-General were brought to an end with a consciousness on his part of having at all times administered the wire systems with justice and fairness to the employees and the owners of these properties, and in such a way as to render the best service possible to the general public under abnormal conditions.

ALIEN ENEMY PROPERTY CUSTODIAN. In a report published shortly after the resignation of Mr. A. Mitchell Palmer from the position of Alien Enemy Property Custodian, the following facts were stated: Mr. Palmer resigned on March 5th, in order to take up his duties as Attorney-General of the United States. He was succeeded by Mr. Francis P. Garvin, who had been his chief assistant. The total value of enemy property in the hands of the Alien Enemy Property Custodian on Feb. 15, 1919, reached

approximately \$700,000,000. On that date practically all the alien enemy property in the country had been seized. The report pictured the operations of the office as those of the world's greatest trust company, and showed that because of discovering concealed and unreported income and excess profits taxes, the custodian's office actually made a profit in excess of its operating expenses.

The custodian emphatically urged the government to retain the alien enemy property seized, pointing out that it would be about sufficient to meet the claims of our nationals against enemy countries, and that it would be against the traditional policy of the nation to allow its citizens to seek eventual redress from Germany. The report asserted that the German industrial army on American soil had been captured and destroyed. It dealt with the propaganda machinations of this army and its evident unfriendly intentions, and urged that while there should be no trade boycott against Germany, that army should not be allowed to rehabilitate itself here.

At the close of business on Feb. 15, 1919, 35,400 reports of enemy property had been received. "The property of each enemy person is treated in the office as a trust, and administered by an organization which is built upon the general lines of a trust company." The number of separate trusts then being administered amounted to 32,290 and had an aggregate value of \$502,945,724. About 9000 of these cases were covered by reports in which the Administration had not yet reached the stage of valuation. "When the entire number of trusts shall have been finally opened on the books and the readjustment of values consequent upon appraisal shall have been completed, it is safe to say that the total value of enemy property in the hands of the Alien Property Custodian will reach \$700,000,000." The total amount of government funds expended by the office from the time of its organization to Feb. 15, 1919, was about \$1,000,000. This shows that the cost to the government of administering nearly 33,000 trust estates of a total value of \$700,000,000, located in every State in the Union and in every insular possession, was only $\frac{1}{3}$ of 1 per cent of the principal of the trust estates, for a period of 16 months, a record of economical administration which has never been approached by any trust company in the world. Concealed income and excess profits taxes collected from corporation and other taxpayers, controlled by the enemy during the same period, amounted to \$1,604,539, and thus in a measure made the office of the Alien Enemy Property Custodian not only self-supporting but operating at a profit to the government.

When the armistice was signed the Alien Enemy Property Custodian was supplying the government with magnetos for aeroplanes and automobile motors, with cloth to make uniforms for the soldiers, and the dyes with which the cloth was dyed, with medicines, surgical instruments and dressings, with musical instruments, ball bearings, telescopes, optical instruments, engineering instruments, with cocoanut charcoal for making gas masks, glycerine for the making of high explosives, and a large number of other and varied products. In some instances the enemy-owned corporations under the control of the Alien Enemy Property Custodian were running at 100 per cent of their capacity on government business. In addition to enemy-owned

corporations, the Alien Enemy Property Custodian took over a large amount of enemy-owned commodities which were in warehouses and various other places throughout the country. Wherever possible these commodities were turned over to the government. More than 1,500,000 pounds of nickel and several hundred thousand pounds of ferrovanadium were turned over to the Ordnance Department; 98,000 bags of coffee and 10,000 bags of rice were sent to the Food Administration, while chronometers, binoculars, and various astronomical instruments were turned over to the Navy Department.

A few of the things supplied to the government by enemy-owned corporations under the Alien Enemy Property Custodian's supervision were as follows: Bosch Magneto Company, magnetos to army and navy autos, \$2,561,492; Botony Worsted Mills, cloth, shirting, and yarn, etc., \$5,950,669; New Jersey Worsted Spinning Co., yarn, etc., \$8,651,130; Passaic Worsted Spinning Co., \$1,851,114; Gera Mills, \$8,003,492; Norma Co., ball bearings, \$1,100,000; Bayer Co., aspirin tablets, dyes, etc., \$1,160,000; Heyden Chemical Works, acids, etc., \$753,423; Weiner and Pfelderer Co., machines for mixing powder, etc., \$431,376; Kny-Scheerer Corporation, surgical instruments and supplies, \$2,107,155.

WAR BOARDS AND COMMISSIONS. The following are the most important boards and commissions having relations with the conduct of the war as they were constituted in December, 1919:

UNITED STATES SHIPPING BOARD

Chairman—John Barton Payne.

Special assistant to the chairman—Martin J. Gillen
Assistants to the chairman—William C. Ward, Richard H. Bailey, Jr.

Vice chairman—Raymond B. Stevens.

Commissioners—

John A. Donald
Thomas A. Scott

Secretary—John J. Flaherty.

Chief clerk—Malcolm Hay.

General comptroller—E. H. Abadie.

Disbursing officer—Alonzo Tweedale.

Assistant disbursing officer—W. M. Woods.

See SHIPPING; SHIPBUILDING, SAFETY AT SEA, NAVAL PROGRESS.

UNITED STATES SHIPPING BOARD EMERGENCY FLEET CORPORATION

TRUSTEES

John Barton Payne, Raymond B. Stevens, John A. Donald, Thomas A. Scott, J. H. Rosseter, J. L. Ackerson.

ADMINISTRATIVE AND EXECUTIVE OFFICERS

President—John Barton Payne.

Vice-presidents—Raymond B. Stevens, John A. Donald, and J. L. Ackerson.

Treasurer—Alonzo Tweedale.

Assistant treasurers—R. W. Bolling, H. M. Luckett.

General comptroller—E. H. Abadie.

Secretary—John J. Flaherty.

Assistant secretaries—A. W. Cooper, Geoffrey Creyke.

DIVISION OF OPERATIONS

Acting director—J. E. Cushing.

Assistant director—William F. Taylor.

Actuarial department—C. P. Stone, manager.

Allocation department—F. L. Murphy, manager.

Assignment department—A. A. Tennant, manager.

Comptroller—E. H. Abadie.

Construction and repair department—R. L. Hague, manager.

Contract department—George Heerbrandt, manager.

Deck department—Ryland Drennan, manager.

Engineer department—Bruce Gibson, manager.

Exports and imports department—H. Y. Saint, manager.

Filing department—O. M. Marcus, manager.

Governmental and foreign relations department—J. H. Dittmars, Jr., manager.

Purser's department—George Eggers, manager.

Radio department—F. P. Guthrie, manager.

Rate and claim department—D. W. McKellar, manager.

Shipping information department—R. W. Shaw, manager.

Shipping trades department—F. E. Huck, manager.

Supervisor's department—R. E. Wells, manager.

Supply department—M. N. Smith, manager.

Telegraph department—J. G. Taylor, manager.

DIVISION OF CONSTRUCTION

Legal division—W. C. McNitt, general counsel.

Passenger transportation and housing division—W. A. Ball, manager.

Shipyards plants division—R. E. Bakenhus, manager.

Ship construction division—P. J. McAuliffe, manager.

Supply and sales division—G. H. S. Rollason, manager.

Finance division—Tilden Adamson, comptroller.

General office—George E. Oller, manager.

Plant protection section—Maj. Norman MacLeod, head.

UNITED STATES RAILROAD ADMINISTRATION

Director-general—Walker D. Hines.

Assistant to the Director-general—Brice Clagett.

General Assistant to the Director-general—H. A. Taylor.

Financial Assistant to the Director-general—G. H. Parker.

General counsel—E. Marvin Underwood.

Director division of—

Operation—W. T. Tyler.

Traffic—Edward Chambers.

Labor—W. S. Carter.

Accounting—Charles A. Prouty.

Inland waterways—G. A. Tomlinson.

Capital expenditures—T. O. Powell.

Public service—Max Thelen.

Finance—Swagar Sherley.

Purchases—H. B. Spencer.

Board of railroad wages and working conditions—A. O. Wharton, chairman.

REGIONAL DIRECTORS

Eastern region—A. T. Hardin, New York City.

Allegheny region—L. W. Baldwin, Philadelphia, Pa.

Northwestern region—R. H. Aishton, Chicago, Ill.

Southern region—R. L. Winchell, Atlanta, Ga.

Central western region—Hale Holden, Chicago, Ill.

Southwestern region—B. F. Bush, St. Louis, Mo.

Pochohontas region—N. D. Maher, Roanoke, Va.

See RAILROADS.

UNITED STATES COUNCIL OF NATIONAL DEFENSE

THE COUNCIL

Chairman—The Secretary of War.

The Secretary of the Navy.

The Secretary of the Interior.

The Secretary of Agriculture.

The Secretary of Commerce.

The Secretary of Labor.

THE ADVISORY COMMISSION

Chairman—Daniel Willard.

Bernard M. Baruch, Howard E. Coffin, Hollis Godfrey, Samuel Gompers, Dr. Franklin H. Martin, Julius Rosenwald.

Director of the council and of the advisory commission—Grosvenor B. Clarkson.

Assistant to the director—E. K. Ellsworth.

Disbursing and appointment officer—Edna B. Garfield.

THE JOINT BOARD

The Chief of Staff, Army, Gen. Peyton C. March.

The Director Operations Division, General Staff, Army.

Maj.-Gen. W. G. Haan.

The Director War Plans Division, General Staff, Army.

Maj.-Gen. Henry Jervey.

The Chief of Naval Operations, Admiral R. F. Coontz.

The Director Plans Division, Office of Naval Operations,

Rear-Admiral J. H. Oliver.

The Assistant Chief of Naval Operations, Capt. Benjamin F. Hutchison.

Secretary—Jarvis Butler.

JOINT ARMY AND NAVY PLANNING COMMITTEE

Army members—Cols. John McA. Palmer, John J. Kingman, John W. Gulick, Maj. William J. Westervelt.

Navy member—Capt. H. E. Yarnell.

WAR FINANCE CORPORATION

Chairman—Carter Glass, *Secretary of the Treasury*.
Managing director—Eugene Meyer, Jr. (Term expires May 17, 1922.)

Directors—

William P. G. Harding, Governor of the Federal Reserve Board. (Term expires May 17, 1920.)
 Angus W. McLean (Term expires May 17, 1922.)
Secretary-treasurer—R. Reyburn Burklin
Acting secretary-treasurer—Eugene P. O'Daniel.
General counsel—Louis B. Wehle.
Consulting counsel—Milton C. Elliott.
Chief examiner—Herbert G. Moulton.
Chief clerk—Charles W. Hanford.
Statistician—Elisha M. Friedman.
 See WAR FINANCE CORPORATION.

UNITED STATES FUEL ADMINISTRATION

United States Fuel Administrator—Harry A. Garfield
Executive secretary—George Edwin Howes.

ALIEN PROPERTY CUSTODIAN

Alien Property Custodian—Francis P. Garvan.
Managing director—Henry E. Ahern
Director bureau of administration—Norman B. Dreher
Director bureau of trusts—H. B. Caton.
General counsel—Lucian H. Boggs

See INSURANCE and section on *Alien Enemy Property Custodian* in this article. For information on the Victory Loan, war finance, statistics of production, stock markets, new industries, and trade control, see FINANCIAL REVIEW and TAXATION. See also AERONAUTICS; INDUSTRIAL RECONSTRUCTION; LABOR; and WAR INDUSTRIES BOARD.

UNITED STATES MILITARY ACADEMY. A school for the practical and theoretical training of cadets for the military service of the United States. The earliest proposal for such an institution was made in 1776, and in the following year there was established a Corps of Invalids, "to serve as a military school for young gentlemen previous to their being appointed to marching regiments." The present academy was opened in 1802, and from that time till November, 1918, had graduated 6539 cadets. At that time two classes were graduated before the normal time, because of the war period. Since November, 1918, 816 new cadets have been admitted; and there were then 483 cadets in the fourth class. There are at present 159 instructors. The library contains 106,284 volumes. The Superintendent and Commandant is now Brig.-Gen. Douglas MacArthur, U. S. Army.

UNITED STATES NATIONAL MUSEUM.

The scope of the Museum embraces many subjects which can be classed under the following headings: (1) Natural history. (2) Applied science and art (arts and industries). (3) National Gallery of Art, including the Freer collections of American and Oriental art. (4) American history. The total number of accessions received during the fiscal year 1919 was 526,845, classified and assigned as follows: Department of Anthropology, 12,333; Zoölogy, 442,383; Botany, 40,357; Geology and Mineralogy, 4750; Paleontology, 26,050; Textiles, etc., 884; Mineral Technology, 62; and National Gallery of Art, 26. Three thousand and ninety-six articles were loaned for exhibition, mainly for the divisions of history and American archaeology and the Gallery of Art. Purchases were made from the Frances Lea Chamberlain funds and the Henry Ward Ranger funds.

In July, 1918, in coöperation with the War and Navy Departments, the Museum commenced the assembling and installation of a collection of material relating to the world war, which will form one of the most important ever under-

taken. Its object is to preserve and exhibit for the benefit of the public a series of objects illustrating the military and naval activities of all the countries engaged in the war. The value of such a collection cannot be overestimated, either from a popular or scientific point of view, forming not only a fit supplement to the written records relating to the history of the war, but constituting a notable memorial to the patriotic forces who took part in this great war. The collections embrace the following classes of material—general military equipment, including tanks, field and machine guns, air service equipment, represented by examples of modern airplanes; general naval equipment, such as models of modern ships, guns, and other war paraphernalia, individual military and naval equipment of the officers and enlisted men, military and naval service insignia, commemorative medals, and military and naval decorations and medals; pictures, paintings, photographs, maps, books, pamphlets, etc., and captured material of every character. The collection, comprising approximately 40,000 objects, occupies 70,000 square feet of space, and will require over 150,000 square feet with other historical material, when completely installed.

The building for the Freer collections is approaching completion, and it is expected that the installation of this unexcelled collection of American and Oriental art will be opened to the public during the year 1920.

The National Gallery of Art, which is represented by more than 9000 objects, exclusive of the Freer collection, which includes 6000 objects, received in June, 1919, a most valuable gift of 24 paintings by Guardi, Gainsborough, Lawrence, Titian, van Orley, Wilson, Rubens, Rembrandt, Cox, Lotto, Mainardi, Turner, Reynolds, Romney, Raeburn, Flinck, Maes, da Imola, and Hogarth. The Gallery is at present housed in the main north hall of the Natural History Building, but it is expected that provision will be made in a few years for a building of art and history.

The members of the staff of the Museum continued to devote much of their time to work in connection with the war until the armistice was signed in November, 1918.

The Bureau of War Risk Insurance occupied, until April, 1919, 136,000 square feet of space in the Natural History Building for office purposes, formerly devoted to exhibitions for the public. As the occupancy of this building by that Bureau closed all of the exposition halls for nine months of the fiscal year 1919, the attendance was only 132,859 for the Natural History Building and 368,036 for the Arts and Industries Building, including the Smithsonian building.

UNITED STATES NAVAL ACADEMY.

Located at Annapolis, Md. At the beginning of the academic year, Oct. 1, 1919, there were enrolled 2086 midshipmen and 34 post-graduate students. The faculty numbers 250. The library contains 57,837 volumes. During the war period the course of instruction was reduced from four years to three years. In October, 1919, the four year course was resumed by the three lower classes. Bancroft Hall, the midshipmen's quarters, has recently been doubled in size. A new building, to be known as Navigation and Seamanship Building, is now in course of construction, and will be used for instructional purposes. Superintendent, Rear Admiral A. H. Scales, U. S. N.

UNIVERSALISTS. The latest available statistics for this denomination (1918) show that it had a total membership of 61,000, with 671 ministers, and 890 churches, while the Sunday schools show a membership of over 50,000. The year 1920 is the 150th anniversary of the founding of the church, and many preparations have been made for the fitting celebration of this event in the history of the church. What has been called the "Great Drive" was launched to reestablish the church more firmly in face of the social unrest that is prevalent all over the world. A financial goal of \$1,000,000 was set, which was oversubscribed by about \$1,500,000. The church feels that it is gaining ground, not only in membership, but in the conviction of its ideals. Missionary work is maintained in Japan, Korea, and China, from which reports show that the work has been progressing very favorably during the year. Home missionary work is carried, especially among the negroes of the South. There is a woman's branch of this work. Theological schools are maintained in connection with St. Lawrence University, Tufts College, and the University of Chicago. The denomination also has secondary schools as follows: Dean Academy, Franklin, Mass.; Goddard Seminary, Barre, Vt.; Westbrook Academy, Portland, Me., and a school for the education of colored youths at Suffolk, Va. The secretary of the denomination is Rev. W. H. Skeels, Utica, N. Y.

UNIVERSITIES AND COLLEGES. ATTENDANCE. Detailed information concerning attendance at the various colleges and universities is not available. It is, however, certain that the enrollment in the colleges and universities surpasses all previous records. Some 60 of the larger institutions having a total of 130,603 students in 1916 reported an enrollment of 158,816 for 1919. In some instances the increase has been as much as 50 per cent over that of last year. In general, the largest increases have been in the institutions dealing with engineering, medicine and law.

AMERICAN UNIVERSITY UNION. The American University Union was originally established to meet the needs of American college men who were in war service abroad. The success of the enterprise was so pronounced that the trustees have decided that the Union may serve a permanent function, consequently it has been continued both in Paris and in London. The city of Paris has presented a site, valued at \$100,000 and upon this the Union will establish a permanent home. The organization of the Board will be changed from a self-perpetuating body to one made up in a large measure of the representatives chosen by various American organizations and associations. Nearly all of the most important institutions of higher learning in this country have joined for the present year.

CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING. On April 16th, 1905, Mr. Andrew Carnegie addressed a letter to 25 men including many of the best known professors of colleges and universities in the United States. In this letter he wrote "I have reached the conclusion that the least rewarded of all the professions is that of the teacher in our higher educational institutions. . . . Able men hesitate to accept teaching as a career, and many old professors whose places should be occupied by younger

men can not be retired. . . . I have, therefore, transferred to you and your successors, as Trustees, \$10,000,000 5 per cent first mortgage bonds of the United States Steel Corporation, the revenue from which is to provide retiring pensions for the teachers of universities, colleges and technical schools in our country, Canada and Newfoundland, under such conditions as you may adopt from time to time."

The Executive Committee of the Board obtained from the Congress of the United States an act of incorporation which enabled the corporation "to receive and maintain funds for paying pensions to college teachers in the United States, Canada and Newfoundland; and in general to do and perform all things necessary to encourage, uphold and dignify the profession of the teacher and the cause of higher education." The rules adopted for conferring of retiring allowances required a service of 25 years as a professor and 65 years as the minimum limit of age at which retirement could be asked. The Board reserved the right to make such changes as experience might indicate as desirable for the benefit of the whole body of teachers. Consequently in 1908 they extended the privileges of the Foundation to widows of teachers and to instructors as well as professors.

In March, 1908, Mr. Carnegie offered \$5,000,000 additional endowment in order that the Foundation might admit State universities to the benefits of the Foundation.

In 1918, the last year for which reports are available, 74 institutions were on the accredited list of the Foundation. Of these 63 were endowed colleges controlled by Boards of Trustees. Ten are tax supported institutions. The Carnegie Institute of Technology is also an associated institution.

On Jan. 31, 1913, Mr. Carnegie gave to the Trustees of the Foundation \$1,250,000 as an endowment for the Division of Educational Enquiry.

Within a few years from its organization it became evident to the trustees of the Foundation that a non-contributory plan for teachers' pensions had very serious defects and that certain changes were imperative. After careful study it was decided to establish a contributory system of annuity contracts and to offer with these insurance contracts. Meanwhile the Trustees took measures to fulfill the expectations of the 6000 teachers who were in the associated institutions.

The 13th annual report of the President and Treasurer of the Foundation shows resources amounting to \$18,394,000. The total income for the year ending June 30, 1918 was \$1,173,754.16. The total expenditures were \$905,222.80. Of this amount \$680,855.71 was paid for retiring allowances to officers, teachers and widows of institutions on the associated lists; \$118,667.30 was for allowances and pensions granted to individuals and \$51,036.93 was spent in the Division of Educational Enquiry. The general average of retiring allowances was \$1,560.24.

During the year the Foundation published *Bulletin No. 13*, entitled, "Justice and the Poor," by Reginald Heber Smith. This being the second in a series of studies of legal and cognate matters. The bulletin has received very widespread attention. It presents certain conditions that exist in reference to the administration of Justice. It maintains that freedom and

equality of justice is an ideal, but that the denial of justice is a fact. It describes three main defects in the administration of justice. The first is delay, the second is court costs and fees and the third is the expense of counsel.

Part two of the report considers in detail the agencies that are employed for securing a more equal administration of the law. Among these agencies are mentioned the small claims courts; conciliation, arbitration and domestic relation courts and legal aid organizations.

Part three deals with Legal Aid Work in the United States. The bulletin can be obtained from the Carnegie Foundation for the Advancement of Teaching, 576 Fifth Avenue, New York City.

CHANGES IN ORGANIZATION. During 1918 a considerable number of colleges and universities adopted the four quarter system. Nearly all of these institutions changed back to the former semester plan in 1919.

The reorganization programme adopted by the Yale Corporation in the early part of 1919 has attracted much attention. The undergraduate after 1919 will enter the University rather than one of the schools and he is no longer under the necessity of presenting Latin or advanced mathematics as an entrance requirement. There is a common Freshman year which will be so arranged that every Freshman may have the opportunity to "find himself" through a preliminary introduction to a wide variety of courses and subjects. The professional sciences will be given in the engineering school. He will attend Yale College for certain other courses. There will be a separate Freshman faculty and Dean and the instructors for undergraduate teaching will be selected for their teaching ability.

Princeton University also made noteworthy changes in their curriculum. Beginning with 1919 Greek is no longer required for entrance to the bachelor of arts course nor is Latin required of students proceeding to the degree of bachelor of science, provided they offer added requirements in mathematics and modern languages. The degree of bachelor of letters is no longer granted. It is intended to meet the needs of students who are primarily interested in the humanities and also give attention to the others who are interested in the training along the line of mathematics and science. To this end the courses in the upper classes are arranged in three large divisions: one of philosophy, literature, languages and art and another of mathematics and the sciences with an intermediate division of history, politics and economics.

Women are now admitted to the school of medicine of the Western Reserve University.

EDUCATION FOR THE AMERICAN EXPEDITIONARY FORCES IN FRANCE. After the signing of the armistice it became evident that the army should offer educational opportunities to the men of the Expeditionary Forces who were awaiting their return home. Col. Ira L. Reeves, who previous to the war was President of Norwich University, was detailed to formulate plans for this project and to supervise and manage the educational agencies.

The educational opportunities in France were divided into four branches,—The American Army University, Post Schools and details of officers and men for graduate work in French and Brit-

ish Universities and Division Schools. The purpose of the American Army University was to assist men in the continuation of their education and to prepare them for life when they left the army.

The American Army University. The American Army University was located at Beaune, southeast of Paris, on the plains of Cote d'Or. It was here that the American army had maintained a large base hospital and accordingly there was available a considerable number of buildings. The construction of roads and such new buildings as were needed was done by the army. When the work was completed there were 500 buildings, each 150' x 30' of the ordinary barrack type. Connected with the University was a farm of 600 acres which was used for instruction in agriculture. A branch of the University was also opened at Bellevue near Versailles for students of art and architecture. The attendance at this branch was nearly 1000. The University was formally opened Mar. 18, 1919. The work was arranged on the trimester plan. The University was composed of the following schools and colleges: Agriculture, Arts, Business Education, Engineering, Industry and Trades, Journalism, Law, Letters, Medical, Science, Music, Science, and the department of Citizenship. More than 6000 men were in regular attendance at the University. The staff of instructors was recruited in part from the men who had been connected with the Y. M. C. A., their status being changed to that of the Army Educational Corps. Other instructors were chosen from qualified officers and men.

Post Schools. By the first of January, 1919, Post Schools for elementary work had been established wherever 500 or more men were stationed. All illiterates among these men were compelled to attend these schools one hour a day for five days of the week. Attendance for others was optional.

Division Schools. Men who desired instruction that could not be given at Post Schools were assembled in divisions and the Division Schools were organized to teach nearly all of the ordinary secondary school subjects as well as many vocational subjects.

Graduate Work for American Soldiers in French and British Universities. The Universities of both France and England were most generous in offering opportunities for advanced work to the American soldiers. In France alone the Universities offered opportunities for 7300 men. More than 5800 American soldiers took advantage of these opportunities. At the Sorbonne in Paris 1711 American soldiers were registered; 1107 were registered at the University of Toulouse; the others were scattered among 12 other French Universities which participated in the plan.

ENDOWMENT CAMPAIGNS. During 1919 there have been many noteworthy achievements in reference to college endowments. Twenty-two institutions have undertaken campaigns to raise no less than \$100,000,000. A large degree of success has followed these efforts. Harvard is attempting to raise \$15,250,000; Princeton \$14,000,000; Massachusetts Institute of Technology \$10,000,000; New York Institution \$4,450,000, while Northwestern University aims to secure \$25,000,000.

It would seem that the war has called to the attention of the American people the great need

of institutions of higher education. At the same time colleges and universities are compelled to give the salaries of their instructors immediate attention. Thus it happens that the institutions have very generally undertaken to raise endowments to increase the salaries of the instructors, whereas heretofore such campaigns have usually been conducted for the purpose of extending facilities or for decreasing the expense of students.

EXCHANGE PROFESSORS WITH CHILE. The late Prof. H. Morse Stephens conceived a plan by which the University of California was to become the centre for the exchange of educational relations with the Hispanic countries. During 1919 arrangements were made for the exchange of professors and instructors with Chile. During this year a Chilean commission, headed by Dr. Don Pedro Aguirre, came to Berkeley, and arranged for a series of exchanges. The project was ratified by the Government of Chile, the University of Chile and the University of California. It provides that the Chilean government and institutions in the United States are to exchange from two to four professors or instructors each year. For the year 1920, Dr. Charles E. Chapman, Associate Professor of Hispanic American History, University of California and Mr. Edward M. Gregory, a teacher of Spanish in the San Francisco Polytechnic High School have been appointed as exchange professors. The government of Chile pays the expenses of the men whom they send, but each institution in this country pays the expenses of the instructor that they furnish. It is proposed that eventually one of the instructors from the United States shall represent a department of some university, a second shall represent technical schools, a third normal schools and the fourth the schools of secondary grade. For a number of years Chile has looked almost wholly to France and Germany for educational inspiration. This exchange of instructors represents the first step in a plan for educational coöperation between the two countries.

FOREIGN STUDENTS IN THE UNITED STATES.
Australia. At the University of California, 96 Australian soldiers are studying agriculture. These men were selected from about 1000 applicants. Seventy-five per cent of them have asked their government for 12 months, the remainder are to receive six months' training in the United States. Most of the men are studying irrigation as applied to intensive agriculture. The average age of these men is 28½ years. Thirty-seven of the number own their farms. The others have guaranteed to their government that they will purchase land in irrigated districts. Many of the students will visit various parts of the United States under the direction of the university to study soils and crops.

China. One hundred and thirty young men and women graduates of Chinese universities are in America to take various courses in the colleges and universities.

France. A party of 122 French girls, who were winners of scholarships in American institutions arrived in the United States in September under the auspices of the Association of American Colleges. These young women were selected in France by a committee headed by Miss Mary L. Benton of Carlton College, North-

field, Minn. One hundred and fourteen other French girls are studying throughout the country. There are also 34 disabled French soldiers in our institutions.

Japan. The Japanese Department of Education appointed 80 men to study in the United States. These students are known in Japan as government traveling students. Their appointment is a reward for faithful service and preparation and furnishes them the opportunity to prepare themselves for promotion. They are generally men of mature age, most of them married and upon their return they will become leaders in higher education. This is the largest delegation of Japanese government students that has been registered in our institutions.

Serbia. The International Serbian Educational Committee in connection with certain officials of Serbia has brought to this country 58 Serbian students. These young people, who have had the equivalent of the Freshman year of our college work, have been distributed among various institutions of higher learning in the United States. They have bound themselves to remain in this country not more than four years and not to become residents of the United States. These students were selected on account of their ability and their willingness to serve their country in various capacities. Means for their support is supplied in a large measure by the International Committee.

GIFTS AND BENEFACTIONS. Brown University received a gift of \$150,000 for a new modern language building from Edgar L. Marston together with contributions of \$200,000 by his personal friends for maintenance of the buildings—Edward F. Searles left \$1,500,000 in Pacific Improvement Company Stocks to the University of California; \$200,000 was given by Miss Annie M. Alexander to the University of California. Mr. George W. Carpenter left \$1,220,344 to Columbia, \$1,420,000 to Barnard College and \$100,000 to the University of California and the Theological Seminary at Berkeley, California. By the will of A. F. Estabrook of Boston a bequest of \$100,000 is made to Clark University and the Massachusetts Institute of Technology. Richard M. Colgate left \$100,000 to Colgate University for a dormitory and \$100,000 to Yale for the advancement of the intellectual teaching of freshmen students. The University of Chicago received \$100,000 from Andrew MacLeish for an administration building—Cornell received a gift of a chemical laboratory to cost approximately \$1,500,000 from an anonymous donor, also another gift of \$100,000 from John Stambaugh to endow a professorship in history. By the will of Morton F. Plant the Connecticut College for Women received \$250,000. Bermo Loewy has left property to the amount of \$250,000 to revert to Cornell University upon the death of his wife. The General Education Board announced a gift of \$500,000 toward a two million fund to be raised to endow a graduate school of education for Harvard. By the gift of Hervey E. Wetzel, Harvard University received \$100,000. Dr. J. Ewing Mears bequeathed \$100,000 to Harvard University for the study of methods to reform and cure criminals and mental defectives by surgery. By the will of Lawrence E. Sexton, Harvard receives property valued at \$100,000 and \$5,000,000 from H. C. Frick. An anonymous gift of approximately \$400,000 was given

to Johns Hopkins University for erection of a building for a woman's clinic. Knox College receives a gift of \$100,000 from Mrs. Lyman Kay Seymour. An anonymous donor of \$7,000,000 to the Massachusetts Institute of Technology has agreed to give four million if three million more is pledged toward the eight million endowment fund being raised by Jan. 1, 1920. Massachusetts Institute of Technology receives by the will of H. C. Frick, \$5,000,000. By the will of the late William Irvine, the University of Pennsylvania receives nearly \$750,000, also a gift of \$1,000,000 from the Bennett legacy for an auditorium and women's dormitory. By the will of Mr. H. C. Frick, Princeton receives \$15,000,000. Mr. George R. Eastman has given \$3,500,000 to the University of Rochester to establish the Eastman School of Music. Chas. N. Clark has left approximately \$500,000 to Smith and Mount Holyoke colleges. The Lord Stratheona gift to Yale was about \$600,000; Yale will receive \$18,000,000 from the John W. Sterling estate. This is three million more than was expected. Yale also receives \$421,233 as residuary legatee under the will of Frederick Mead. Vanderbilt University received \$4,000,000 from the General Education Board for establishing a new school of medicine at Nashville. Vassar received \$100,000 from Mrs. James H. Williams for a faculty hall which is to bear her name and \$100,000 from Mrs. Blanche Ferry Hooker and Mrs. Queenie Ferry Cooley. The University of Virginia received a gift of \$150,000 from Paul Goodloe McIntire to establish a school of art and music to be the finest in the South. The Washington University, School of Medicine, St. Louis, was given \$150,000 by the General Education Board if a like sum be raised to endow a school of pharmacology. Dr. George W. Crile has given \$100,000 to endow a chair of surgery at the Western Reserve University. The General Education Board has received a gift of \$20,000,000 from J. D. Rockefeller, all of which is to be distributed within 50 years, for improvement of medical education in the United States.

INTELLIGENCE TESTS FOR COLLEGE ADMISSIONS. Before the war it had been suggested by psychologists that intelligence examinations might be used to assist in selecting students for admission to college and that such tests might also be of value in determining the students' fitness for following certain courses while in the institution. A few experiments were conducted, but institutions in general were not convinced that the examinations possessed any marked value.

During the war many psychologists assisted the government in classifying the recruits for the army. Extensive investigations and experiments in the use of intelligence examinations were conducted. Satisfactory methods were finally developed and many thousands of young men were tested. At the close of the war the War Department and the Bureau of Education suggested to colleges and universities that these examinations or ones similar to them might be used with the returned soldiers who sought admission to their institutions. Many of the colleges and universities adopted the suggestion and in addition the examinations were used with those who sought regular admission in the fall of 1919. There has not been sufficient time to determine the efficiency of this method of ad-

mission. Thus far, however, the officers of the institutions in which it has been tried have indicated considerable confidence in its use. The faculties of various institutions are conducting extensive investigations with respect to the merits of these tests.

JUNIOR COLLEGES. Since 1907, 69 Junior Colleges have been organized. More than half of these have been organized since 1915. In a study prepared by F. M. McDowell and published as a bulletin of the Bureau of Education, four types of Junior Colleges are distinguished.

1. The junior college or lower division of the university.
2. The normal school accredited for two years of college work.
3. The public high school extended to include the first two years of college work.
4. The small private college which has limited its course to two years beyond the standard high school.

The author of the bulletin does not regard the training and experience of instructors, who now teach in Junior Colleges, as equal to that of standard colleges. Instructors are required to carry heavier schedules while the enrollment in the recitation section in the Junior Colleges is much less on an average than is to be found in the standard colleges. The author believes that the Junior College has appeared in response to certain fundamental needs and that it seems assured of a place in our educational system.

NEW PRESIDENTS. During the year 1919 the following were elected. The Rev. Clifton D. Gray was elected president of Bates College; The Rev. William Devlin was elected president of Boston College; The Rev. Emory W. Hunt was made president of Bucknell College; Dr. David P. Barrows was elected President of the University of California to succeed Pres. Benj. Ide Wheeler; Dr. George Norlin from the University of Colorado was made president to succeed President Farrand; Louis O. Lehman was elected president of Eureka College, Illinois; Dean Arthur T. Belknap of Franklin College was called to the presidency of Grand Island College, Nebraska; Dr. Daniel Russell Hodgdon was elected president of Hahnemann College and Medical School of Chicago; The Rev. Murray Bartlett, D.D., accepted the presidency of Hobart College; Dr. Charles Bray Williams was made president of Howard College, Alabama; The Rev. A. N. Evans was elected to the presidency of Howard-Payne College; Dr. Edward Smith Parsons was inaugurated as president of Marietta College; Marion LeRoy Burton was elected president of Michigan University. Prof. Alfred Atkinson succeeded J. M. Hamilton as president of the State College of Agriculture and Mechanic Arts at the University of Montana; Dr. Isaac Butler Schreckengast was installed as chancellor of Nebraska Wesleyan University; David Spence Hill was elected president of the University of New Mexico; Dr. Harry Woodburn Chase was elected president of the University of North Carolina; Dr. Lynn Harold Hough was made president of Northwestern University; Dr. William Arthur Maddox assumed the presidency of Rockford College; Willis E. Johnson succeeded Dr. E. C. Perisho as president of South Dakota College; Dr. Richard Eddy Sykes was inaugurated as president of St. Lawrence Uni-

versity; Bernard Iddings Bell was elected president of St. Stephen's College; Dr. H. A. Morgan was elected president of the University of Tennessee; The Rev. D. H. E. Stout accepted the presidency of the Texas Women's College; Henry Kinsey Brown was appointed to succeed O. P. Kinsey as president of Valparaiso University; Dr. Samuel Charles Black was inaugurated as president of Washington and Jefferson College; Dr. Julian A. C. Chandler was elected president of William and Mary's College; Charles Frederick Wishart was elected president of Wooster University.

RESERVE OFFICERS' TRAINING CORPS. The National Defense Act passed by Congress in 1916 contained the following provision: "The President is hereby authorized to establish and maintain in civil educational institutions, a Reserve Officers' Training Corps, which shall consist of a senior division organized at universities and colleges—and a junior division organized at all other public or private educational institutions—and each division shall consist of units of the several arms or corps in such numbers and strength as the President may prescribe."

Institutions that desire to organize a Reserve Officers' Training Corps are required to supply a minimum of 100 physically fit students, who will take the course. They must also give the army officer who is detailed for instruction a rank as Professor with the title of Professor of Military Science and Tactics. The students must be provided with military instruction for at least four hours per week. The government provides an adequate equipment of rifles, bayonets, belts, canteens, etc., with ammunition for target practice. They also supply students with one complete uniform each year.

In September, 1919, there were on R. O. T. C. duty, 666 officers in 350 institutions. Approximately 100,000 young men were enrolled, of these about 10,000 were pursuing the advanced course with the intention of entering the Officers' Reserve Corps upon graduation.

RHODES SCHOLARS. Owing to the fact that no American Rhodes Scholars were appointed in 1918, 64 scholarships were allotted in October and later the Rhodes Trust decided to allot three additional scholarships at large. A part of these scholarships were designated for the year 1918. Such scholars enter Oxford in January, 1920, while those named for 1919 will enter in October, 1920.

The qualifying examinations heretofore required of all candidates were withdrawn and the scholars were selected on the basis of their collegiate or university record, supplemented if necessary by such further tests as the committee of selection deemed desirable. The exemption from examinations did not apply to such examinations as are required by Oxford University for any of its degrees.

During the year there has been a large amount of discussion in reference to the standing of the American candidates in reference to the qualifying examinations that have been given. Prof. George R. Parkin of the Rhodes Scholarship Trust has stated that half the candidates for the scholarships in the different States of the Union during the past 13 years have failed to pass these examinations. It has been stated by others that the qualifying examinations were

not difficult as compared with those employed in the English Educational System. Consequently such persons have been inclined to criticize the thoroughness of the American elementary and secondary schools. Others have maintained that in view of the fact that there were no restrictions regarding those who might enter these examinations there was every reason to expect that many who were unqualified would attempt them and that in particular the large emphasis placed upon the athletic attainment of the candidates served to discourage those whose academic qualifications were desirable. It is believed that the new plan of selection will do much in the way of remedying the situation.

SCHOLARSHIPS. *National Research Fellowships in Physics and Chemistry.* The Rockefeller Foundation has entrusted the National Research Council "with the expenditure of an appropriation of \$500,000 within a period of five years for promoting fundamental research in physics and chemistry in educational institutions in the United States." Among the important results which may be expected are the following: "(1) Opening of a scientific career to a large number of able investigators and their more thorough training in research, thus meeting an urgent need of our universities and industries. (2) Increase of knowledge in regard to the fundamental principles of physics and chemistry, upon which the progress of all the sciences and the development of industry depend. (3) Creation of more favorable conditions for research in the educational institutions of this country." The appointment of the research fellows will follow careful consideration of the attainments of the candidates. In general, fellowships will be awarded to men having a training equivalent to that required for a doctor's degree in an ordinary American university or scientific school. The salary will be about \$1500 for the first year, although the fellowship board may increase this amount to whatever they deem it advisable.

Scholarships for Those Who Served in the Great War. Wisconsin passed a State educational bonus law by which all former soldiers, sailors, marines and nurses may attend the University of Wisconsin. Nearly 1300 such students were in residence at the university.

Three hundred and thirty scholarships on the LaVerne-Noyes Foundation were awarded for the autumn quarter at the University of Chicago. The Foundation of an estimated value of \$2,000,000 provided for the payment of the tuitions of deserving students who served in the great war.

Scholarships in French Universities to American Girls. The French government offered 24 scholarships in the French universities to American girls. All of these scholarships were taken.

Fellowships in French Universities for American Students. The Society for American Fellowships in French Universities has made 25 fellowships available to qualified students for the present academic year. These fellowships are of the value of \$1000 a year for two years and were open to properly qualified American citizens whether college graduates or with experience in industrial establishments in work requiring high technical skill. The fundamental purpose in offering the scholarships is to encourage the development of a body of university scholarships with personal acquaintance

with French achievements and which will be in a position to restore in all branches of American public opinion the just status of French science and learning.

TRADE UNION COLLEGES. For several years organized labor has been manifesting very great interest in education. Each year the American Federation has adopted an educational programme as part of its platform. Recently the trade unions in Chicago, Boston and Washington, D. C., have instituted trade union colleges. These institutions have been formed "in order to make directly accessible to working men and working women the study of subjects which will further the progress of organized labor," also "to provide educational opportunities for those who work for a livelihood."

Classes are held two evenings each week for two hour periods; a course consisting of 10 lectures being combination lectures and seminar. The classes are conducted in buildings and rooms that are easily accessible to the students. A conception of the character of the college can be gained from a statement of the courses that have been announced as follows: Beginners' and Advanced English, Short Story Writing, Public Speaking, Parliamentary Law, Industrial Hygiene, Economics, Political Science, History of Trade Unionism, Current Labor Problems, etc.

The government of the college rests with an educational council consisting of representatives from the central labor union and in the case of the Boston institution representatives elected by the teachers. The instructional staff is selected from those who are specialists in the

of the Apollo Club. He published valuable guides to the standard operas, oratorios, and symphonies, translated several of Nohl's biographies of musicians, and edited Theodore Thomas's *Autobiography*.

URUGUAY. A South American republic, bounded by Brazil, Argentina, and Bolivia. Capital, Montevideo.

AREA, POPULATION, ETC. The area is estimated at 72,153 square miles and the population, Dec. 31, 1917, at 1,407,247, giving a density per square mile of 19.5. The population in 1908 was 1,042,686; the rate of increase was checked during the war. The population of Montevideo, Jan. 31, 1918, was 378,993. Among other large cities are Paysanda and Salto, each with 24,000 inhabitants. A bill was introduced in the House of Representatives in 1919 for the establishment of 500 new schools in the country. Of these 100 were public and 400 rural schools. In order that the distribution of them should correspond to the needs of the inhabitants it was required that the percentage of illiteracy and the means of communication should be considered in each case.

PRODUCTION. No later figures for production are available than those given in the preceding YEAR BOOK. According to these the acreage of wheat in 1917-18 was 975,936; oats, 165,221; linseed, 36,386; barley, 5824; and the yield in metric tons was, wheat, 355,444; oats, 53,655; linseed, 8467; barley, 2341.

COMMERCE. The foreign trade from 1914 to 1918 inclusive is shown in the following table taken from the *Statesman's Year Book* for 1919:

	1914	1915	1916	1917	1918
Imports	\$6,995,928	\$6,995,228	\$7,442,446	\$7,917,495	\$13,776,941
Exports	14,658,134	14,658,134	13,503,255	21,962,943	23,124,863

particular subject desired. In most instances they are college and university instructors. Some, however, are chosen because of their knowledge of particular conditions affecting the working man. The institution at Chicago has been in operation for more than a year, having enrolled 150 students during the first year. Students who enroll pay a nominal fee which it is expected will be sufficient to pay for the cost of instruction. The unions have, however, indicated their willingness to make assessments upon themselves for the conduct of the institutions.

In view of the fact that organized labor in Massachusetts has for a long time favored the creation of a State university, much interest and importance attaches to the present plan.

UPPER AUSTRIA. Before the disruption of the Austro-Hungarian Empire, a crownland of Austria with an area of 4626 square miles and a population (1911) of 853,006, of whom 843,146 were Austrian subjects. German was the language of 99.7 and Catholicism the religion of 97.31 per cent. Capital, Linz.

UPPER SENEGAL AND NIGER. A constituent colony of the government-general of French West Africa (q.v.).

UPTON, GEORGE PUTNAM. An American writer on music, died at Chicago, May 20. He was born at Roxbury, Mass., Oct. 25, 1835. From 1861 till his death he served without interruption on the editorial staff of the *Chicago Tribune*, until 1885 at the same time as musical critic. He was the founder and first president

The distribution of imports and exports in 1917 and 1918 was as follows:

Countries	Imports from		Exports to	
	1917	1918	1917	1918
	Pesos	Pesos	Pesos	Pesos
Argentina	8,097,235	16,900,428	11,900,139	9,615,454
Brazil	6,420,212	14,574,915	1,249,637	3,954,776
France	1,317,302	2,261,140	15,558,346	19,551,762
Italy	993,213	1,136,750	14,167,189	10,611,081
Spain	2,551,055	4,339,800	4,505,899	20,319,816
U. K.	5,821,532	11,622,123	18,592,408	26,600,280
U. S.	10,585,826	16,450,135	25,210,333	23,243,913

The following information in regard to the value of foreign trade during the first six months of 1919 was supplied by the Bureau of Commercial Statistics: Customhouse value of imports, 18,317,112 pesos (peso equals about \$1.034 U. S. currency); real value, 70,591,905 pesos. Comparing these figures with those of the same period of 1918 shows an increase of 176,262 pesos in the customhouse value of the imports, and an increase of 317,079 pesos in the real value. The difference in favor of the first half of the year of 1919 in regard to the exports amounted to 17,072,831 pesos in comparison with the exports of 1918. The real value of the imports and exports of the first six months of 1919 shows a balance in favor of the trade of the country of 17,639,419 pesos.

RAILWAYS. The sale and transfer of the Uruguay East Coast Railway to the Uruguayan government was completed on October 15th, the sale and transfer to take effect as from Oct. 1, 1919.

It was proposed to extend the tracks and generally place the line in first class order. There was a need of new rolling stock. The difficulty of securing fuel was experienced in Uruguay as elsewhere in South America and the directors of the Central Uruguay railway decided after regard to the high prices and the difficulty of obtaining coal and wood, to make arrangements to extend the use of fuel oil, and contracted for the delivery of a two years' supply.

FINANCE. On July 10, 1918, a law was passed providing that the budget voted for the year (1916-17) with the amendments should be adopted for 1918-19. In the year 1919 the extension of the budget for the following year was several times postponed. The estimates for 1918-19 are given below:

<i>Revenue</i>	<i>Dollars</i>
Customs	12,250,000
Property tax	4,160,000
Trade licenses	1,600,000
Factory and tobacco taxes	1,200,000
Stamped paper and stamps	900,000
Surtaxes on imports and exports	620,000
Other receipts	8,721,428
Total	29,451,428
<i>Expenditure</i>	<i>Dollars</i>
Legislature	713,382
Presidency	69,244
Ministry Foreign Affairs	511,785
Ministry Interior	3,299,417
Ministry Finance	2,142,394
Ministry Industries	876,652
Ministry Public Works	1,324,586
Ministry War and Marine	5,187,850
Public Instruction	3,323,410
Justice	389,640
National obligations	11,683,356
Total	29,521,666

For the fiscal year 1918-19 the revenues actually amounted to 31,851,895 pesos as compared with 28,732,391 pesos in 1917-18. More than half of the increase came from customs revenues.

GOVERNMENT. In the autumn of 1919 radical reforms were made in the constitution. These adopted entirely new principles without regard to the precedents of the great nations of the world. The president's power was limited to an extent not admitted in any of the advanced states. The executive power was divided into two branches: On the one hand the President and on the other a commission known as the National Administrative Commission, composed of nine members and elected by popular vote for six years—one-third being elected for two years as in the United States Senate. Minority representation was insured as in the English system by priority of votes. The choice of president was changed from the old system in which he was elected by Congress to election directly by popular vote. The National Administrative Commission was to deal especially with public instruction, labor, industries, banking institutions, public health, and charities, and must account to Congress, preparing and submitting a budget every year. Congress retained the legislative powers and continued to consist of two Chambers as before. It elects the members of the House and Courts of justice, and approves or rejects treaties concerted by the executive. Any member of the cabinet may present bills as in England and is entitled to take part in the deliberations. By vote of a third of the Chamber a cabinet minister may be called upon to

answer any question. A permanent committee of two senators and five deputies chosen by their respective Chambers remains in session during adjournment of Congress, and represents it in all relations with the executive. It is responsible to Congress and in an emergency may summon Congress. A peculiarity of the new instrument is that Congress is vested with the right to interpret and expand the constitution. President in 1919, Dr. Baltasar Brun. See OLD AGE PENSIONS.

UTAH. POPULATION. The population of the State in 1919 was 373,351, and on July 1, 1919, it was estimated to be 463,431, a gain during the twelvemonth of about 10,000.

AGRICULTURE. The following is compiled from an annual report of the federal Department of Agriculture.

<i>Crop</i>	<i>Year</i>	<i>Acres</i>	<i>Prod Bu</i>	<i>Value</i>
Corn	1919	24,000	432,000	\$648,000
	1918	24,000	672,000	1,216,000
Oats	1919	72,000	384,000	2,399,000
	1918	90,000	532,000	3,928,000
Barley	1919	24,000	720,000	1,015,000
	1918	32,000	1,120,000	1,568,000
Wheat	1919	304,000	3,682,000	7,782,000
	1918	320,000	6,464,000	11,152,000
Hay	1919	453,000	938,000	20,542,000
	1918	484,000	1,020,000	17,442,000
Potatoes	1919	17,000	2,397,000	3,284,000
	1918	20,000	3,600,000	3,492,000

a Tons

TRANSPORTATION. The railway mileage for the State in 1919 was approximately 2447 miles. The roads having the longest mileage were the Denver & Rio Grande, and the San Pedro, Los Angeles, and Salt Lake. See CHILD LABOR.

EDUCATION. The enrollment in the public schools in 1918 was 110,193, and the school population was 134,887. The total receipts for educational purposes in 1917-18 was \$5,506,926, and the disbursements amounted to \$5,549,396. The following table shows further financial statistics:

	<i>High Schools</i>	<i>Junior High Schools</i>	<i>Elementary Schools</i>
Number of teachers			
Male	211	75	289
Female	215	164	2115
Salary			
Male	\$1184	\$853	\$657
Female	1043	915	652

The per capita expenditure for schools in the State in 1917-18, as based on the school population, was \$41.91; as based on enrollment it was \$97.99.

CHARITIES AND CORRECTIONS. The following are the institutions under State control: Prison, Salt Lake City; Industrial School, Ogden; School for the Deaf and Blind, Ogden; Mental Hospital, Provo.

OFFICERS. Governor, Simon Bamberger; Secretary of State, Harden Bennion; Treasurer, Daniel O. Larson; Auditor, Joseph Ririe; Attorney-General, Dan B. Shields.

JUDICIARY. Supreme Court: Chief Justice, E. E. Corfman; Associate Justices, W. M. McCarty, Albert J. Weber, Valentine Gideon, Samuel R. Thurman; Clerk, H. W. Griffith.

UTAH, UNIVERSITY OF. A co-educational State institution at Salt Lake City, Utah. The

registration for the summer session of 1919 was 724, and that of the fall was men, 1082, women, 669, a total of 1751. There were 157 members in the faculty. The library contains 68,080 bound volumes and 21,626 pamphlets. During 1919 there were erected the following buildings: a Dining Hall, a new building for the School of Mines, Stewart Hall (a model school building), and an observatory. The university was founded in 1850. President, John A. Widdsoe, Ph.D., LL.D.

UTICA, NEW YORK. See GARBAGE.

VAN DEN HEUVEL, M. Belgian representative at the Paris Peace Conference. He had had a diplomatic career and had down to a short time before represented Belgium at the Vatican where he sought to defend his country's interests against German intrigues.

VANDERBILT UNIVERSITY. An institution for higher education, at Nashville, Tenn. The enrollment in the University in the fall of 1919 was 1003, while there were about 145 members in the faculty. The library contains about 71,000 volumes. Productive funds amount to \$3,400,000; the annual income is approximately \$250,000. The institution comprises a College of Arts and Science, and Schools of Engineering, Religion, Law, Medicine, Pharmacy, and Dentistry. The school was incorporated in 1872 as Central University, but in the following year, upon a gift from Cornelius Vanderbilt of \$500,000, the name was changed to Vanderbilt University. Since that date, the Vanderbilt family has frequently and generously supported the institution. Andrew Carnegie in 1913 and 1914 gave the school of medicine \$1,000,000. In January, 1918, a campaign for \$1,000,000 to be added to the endowment of the College of Letters and Science was completed. In November, 1919, the school received a gift of \$4,000,000 from the General Board of Education, for the School of Medicine. In 1919 a School of Commerce was established. Chancellor, J. H. Kirkland, LL.D., D.C.L., Ph.D.

VANDERVELDE, EMILE. Belgian representative at the Paris Peace Conference. He was Minister of Justice in Belgium. He had had a long career in Belgian politics as a leader of the Belgian Socialists. He and his party remained loyal to the government and went into exile with it in August, 1914, after the German invasion.

VANDYKE, CARL CHESTER. Congressman, died at Washington, D. C., May 20. He was born at Alexandria, Minn., Feb. 18, 1881; served during the Spanish-American War in the Minnesota volunteers and later entered the government service as railway mail clerk. He studied law and represented the interests of the railway clerks at Washington from 1911 to 1914. He was a member of Congress from 1915 to 1919 and he was a Democrat in politics.

VAN HAMM, CALEB MARSH. Editor, died at Miami, Fla., December 27; well-known among journalists in the Eastern States. He was born at Cincinnati, Ohio, March 11, 1861, and studied law at the University of Cincinnati; served on the staff of Cincinnati papers, 1882-92, then edited the New York *Journal*, and in 1895 became city editor of the New York *World*. He was managing editor of the *World* 1903-10, when he became managing editor of the New York *American*.

VAN LOAN, CHARLES EMMET. Author, died

at Los Angeles, Cal., March 2. He was born at San José, June 29, 1876, and became a newspaper writer in Los Angeles and New York City, contributing in the meanwhile to magazines. He wrote a number of books on the subject of baseball. Among his writings may be mentioned the following: *The Big League* (1911); *The Lucky Seventh* (1913); *The Ten Thousand Dollar Arm* (1912); *Inside the Ropes* (1913); *Buck Parvin and the Movies* (1915); *Old Man Curry* (1916).

VAN TUYL, GEORGE CASEY, JR. Banker, died at Albany, N. Y., February 11. He was born at Albany, N. Y., April 3, 1872. Going into the banking business he became in 1900 the sec. and treas. of the Albany Trust Company. He was its president from 1908 to 1911 and was Superintendent of Banks of New York State from 1911 to 1914. He was also prominent in various other financial institutions of the State.

VAN ZANDT, MARIE. An American soprano, died at Cannes, France, December 31. She was born in New York City in 1860. She made her début in Turin, in 1879. From 1880 to 1885 she was a member of the Opéra-Comique in Paris, after that touring Europe. In America she sang only one season at the Metropolitan Opera House (1891-92). After her marriage to Professor Tcherinov of Moscow she retired from the stage in 1897.

VASSAR COLLEGE. A non-sectarian institution for the education of women, at Poughkeepsie, N. Y. The enrollment in 1919 was 1907, and there were 135 members in the faculty. Productive funds of the college amount to \$3,600,000. The library contains about 100,000 volumes. Vassar was founded in 1861. President, Henry Noble MacCracken, Ph.D., LL.D.

VATICAN CHOIRS. See MUSIC, *Choral Societies*.

VEGETABLES. See HORTICULTURE.

VENEREAL DISEASES. See SOCIAL HYGIENE.

VENEZUELA. A South American republic on the northern coast bounded on the east by British Guiana and on the west by Colombia. Capital, Caracas.

AREA, POPULATION, ETC. The area is estimated at 398,594 square miles; population, estimated, Dec. 31, 1917, 2,844,618; density, seven per square mile. Though the above was the official estimate it has been regarded as too high. The census of 1916 was not completed and in 1919 it was provided that it should be resumed in January, 1920, repeated in 1926, and thereafter at intervals of 10 years. Important cities with their estimated population are as follows: Caracas, about 86,880; Valencia, 54,387; Maracaibo, about 50,000. Primary education is free and nominally compulsory. No later figures are available than those given in the preceding YEAR BOOKS. In 1915 it was required by law that all pupils and students in schools pass a state examination. The courses of studies are all prescribed by the state.

PRODUCTION. Recently the cultivation of coffee has become one of the chief industries. The area planted to coffee is chiefly in the northern and western regions and amounts to over 250,000 acres. As to mineral products the asphalt resources of Venezuela are among the largest in the world. They are situated in the eastern and western divisions. The western area contains a lake of asphalt with an area of

a mile and a half, and in the interior is another lake with an area of over 1000 acres. Asphalt is also found in large quantities along Lake Maracaibo and in the district of Pedernelles.

COMMERCE. Imports (1918) 77,244,950 bolívares; exports 102,659,153. In the latter half of the year the United States was the largest importer, Great Britain the second, and Spain the third. The imports and exports for the preceding five years in bolívares were as follows: Exports, 93,420,225 in 1913; 72,473,912 in 1914; 69,793,970 in 1915; 106,914,089 in 1916; and 114,964,886 in 1917. The exports for the same years were as follows: 152,765,749; 111,505,354; 121,266,458; 117,652,854; and 120,024,360. The commercial balances in favor of the country for the same years were 59,345,523 in 1913; 39,031,441 in 1914; 51,472,488 in 1915; 10,738,756 in 1916; and 15,059,484 in 1917. The following is a comparative table showing the value of imports from the various countries of origin during the July-December period of 1917 and 1918:

Countries	Six months ended December—	
	1917 Bolívares	1918 Bolívares
United States	27,017,302	22,052,470
England	7,583,176	10,738,176
Spain	2,771,723	1,168,237
France	1,992,404	679,549
Colombia	77,690	641,896
Italy	572,630	511,931
Curacao	110,890	262,478
All other countries	521,045	1,188,182
Total	40,946,861	37,242,918

The relative values of the most important items imported, a comparison of values of articles imported during the last six months of 1917 and 1918 were as follows:

Articles	Six months ended December—	
	1917 Bolívares	1918 Bolívares
Cotton cloth	7,108,996	8,367,246
Drugs	2,209,255	2,275,336
Rice	978,356	1,951,981
Cotton thread	328,676	1,252,285
Wheat flour	1,775,061	1,232,408
Machinery (except typewriters)	1,116,784	872,621
Automobiles	741,069	860,956
Wines	620,248	803,088
Caustic soda	230,703	745,567
Paraffin	386,555	725,567
Paper, not specified	654,158	629,620
Empty sacks	185,329	540,813
Tinplate (sheets)	27,165	423,023

Exports during the last half of 1918 were worth 51,321,429 bolívares. The following table shows their destination for the 1917 and 1918 periods:

Countries	Six months ended December—	
	1917 Bolívares	1918 Bolívares
United States	22,810,327	20,542,687
Spain	6,173,565	6,066,231
Curacao	4,244,947	7,029,538
France	4,112,073	5,763,730
Trinidad	1,843,482	5,503,545
England	3,495,668	1,945,544
Santa Lucia	632,290	1,735,377
Italy	940,962	587,741
All other countries	2,430,616	2,147,036
Total	46,683,930	51,321,429

FINANCE. The budget for 1919-20 made receipts and expenditures balance at 49,153,000

bolívares. The expenditures were distributed as follows: Internal relations, 10,981,632; foreign relations, 1,327,032; treasury, 14,109,273; war and navy, 9,000,000; promotion, 4,263,288; public works, 6,193,800; public instruction, 2,791,548; appropriation for budget deficiencies, 486,428 bolívares. The principal sources of revenue as given in the budget are as follows: Import taxes, 10,500,000 bolívares; tax on cigarettes, 7,980,000; liquor tax, 6,750,000; salt tax, 6,500,000; stamp tax, 4,000,000; foreign debt surtax of 30 per cent, 3,300,000; national tax of 12½ per cent, 1,375,000; land tax of 12½ per cent, 1,375,000, etc. The debt of the republic was placed on Dec. 31, 1918, at 143,452,473 bolívares. It had been reduced to that amount during the preceding 10 years from 225,488,801. Of the total the foreign debt amounted to 94,471,641.

RAILWAYS. A contract was made in 1918 for the completion of a railway between the port of Cotorra on Lake Maracaibo, and Villa Rosario in the state of Zulia.

GOVERNMENT. The present constitution went into force, June 13, 1914. Executive power is vested in the president who has a cabinet of seven ministers (Foreign Affairs, Interior, Finance, Public Instruction, Public Works, Fomento, and War and Marine). Legislative power resides in a congress of two houses: The Senate and the Chamber of Deputies. President at the beginning of 1919, Gen. Juan Vicente Gomez.

VENIZELLOS, ELEUTHERIOS. Greek representative at the Paris Peace Conference. He was Prime Minister of Greece. His political career may be briefly outlined as follows: In politics he was a republican, but he supported the dynasty so far as it showed liberal purposes, and saved it from overthrow during the crisis of 1909. He succeeded in bringing about a revision of the constitution, and it was he who organized the Balkan alliance of 1912. He was a vigorous opponent of King Constantine's policy of a disguised neutrality maintained in the German interest, and he desired from the first that Greece should join the Allies. When the intrigues of the Germans and the King continued, he broke definitely with the government and set up a revolutionary administration at Salonika. After the overthrow of Constantine he returned to Athens and became the head of the new national government. He greatly aided the cause of the Allies by organizing the Greek forces and thus facilitating the success of the army at Salonika. His aim politically was the restoration of the Greek nationality and its union into a single state, including the Greeks of Asia Minor and the Aegean islands.

VERMONT. POPULATION. The population of the State in 1910 was 355,956, and on July 1, 1919, it was estimated to be 367,439.

AGRICULTURE. The following table showing the chief crops of the State in the last two years, is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu	Value
Corn	1919	40,000	2,120,000	\$3,710,000
	1918	40,000	1,520,000	2,584,000
Oats	1919	110,000	3,960,000	3,564,000
	1918	110,000	4,510,000	4,059,000
Hay	1919	910,000	1,456,000	29,266,000
	1918	905,000	1,176,000	19,169,000
Potatoes	1919	25,000	3,125,000	4,906,000
	1918	28,000	3,640,000	5,023,000

♠ Tons.

FINANCE. According to the report of the State Treasurer, for the year ending June 30, 1919, the total receipts amounted to \$4,221,582 and the disbursements were \$4,797,589. The balance at the beginning of the year was \$1,133,723 and at the end it was \$557,715. The bonded indebtedness of the State is \$741,531, while the net balance of liabilities over assets was \$633,546. See **CHILD LABOR**.

TRANSPORTATION. The total railway mileage of the State in 1919 was about 1080. There has been practically no new construction in the State during the last seven years.

CHARITIES AND CORRECTIONS. The following institutions are under the supervision of the State Board of Charities and Probation: Prison, at Windsor; House of Correction, at Rutland; Industrial School, at Vergennes; Soldiers' Home at Bennington; School for Feeble-minded; Hospital for the Insane, at Waterbury; Sanatorium, at Pittsford. There are also 10 hospitals under State control. Steps are under way to unite the work of the prison and the House of Correction.

LEGISLATION. The Legislature of 1919 passed 257 acts. Several of them dealt with remodeling the election system, and the incidents thereto. These included a law legalizing absent voting. The State flag was changed to one of 13 alternate red and white stripes, with a blue union containing one large white star which in turn bears the coat of arms of Vermont. There were several acts relating to agriculture, and administrative control over it, including provision for a farm census. Many acts dealt with taxation, chiefly in the form of amendments to existing laws, to ensure greater accuracy of administration. The Vermont Teachers' Retirement System was established. The laws relating to corporations, and to banks, common carriers, and insurance companies in particular, were amended. An act was passed authorizing the incorporation of mutual associations to do workmen's compensation insurance. Further regulation of the practice of medicine, surgery, osteopathy, chiropractic, and paddling was enacted. There was established a Firemen's Relief Fund, similar to the above-mentioned Teachers' Fund. The prevailing attitude toward radical doctrine is shown in Act. No 195, approved March 12th. This reads: "A person who displays, or causes to be displayed, a red flag except as a danger signal, a black flag except as a weather signal, or a banner, ensign, or sign, bearing upon it any inscription opposed to organized government, or sacrilegious in its nature, or opposed to public morals, shall be imprisoned not more than six months or fined not more than \$200, or both."

OFFICERS. Governor, Percival W. Clement; Lieutenant-Governor, Mason S. Stone; Secretary of State, Harry A. Black; Treasurer, Walter F. Scott; Auditor, Benjamin Gates; Attorney-General, F. C. Archibald.

VERMONT, UNIVERSITY OF. A co-educational State institution, at Burlington, Vt. The enrollment for the summer session of 1919 was 200, and for the fall, 848. There are 110 members in the faculty. The library contains 98,975 volumes. The productive funds of the institution are approximately \$1,000,000. The university was founded in 1791. Acting president, GUY W. BAILEY.

VERY, SAMUEL WILLIAMS. Rear-admiral, United States navy, died in Boston, January 3.

He was born at Liverpool, England, April 23, 1846, and graduated at the Naval Academy at Annapolis in 1866 and he rose to the rank of Comdr. in 1895; Capt. in 1901; and Rear Admiral in 1906. He served on many vessels in succession and at several naval stations was engaged in the Coast Survey in Magnetic Investigation. He also had charge of the Expedition to Patagonia in 1882-83 for observing the Transit of Venus. He was in the Philippine and Chinese waters during the Spanish American War and while in command of the *Castine* he received the surrender of Zamboanga in the Philippines, receiving commendation for that result. He was in command of the Naval Station at Hawaii from 1906 to 1908 when he retired.

VESNITCH, M. Representative of Jugoslavia at the Paris Peace Conference. He was Minister of the new southern Slav State at Paris, where he had formerly represented Serbia. He had been on a special Serbian mission to the United States after this country entered the war. He was a close ally of M. Pashitch.

VETERINARY MEDICINE. The fifty-sixth annual meeting of the American Veterinary Medical Association was held at New Orleans, November 17 to 21, at which the following officers were elected: Dr. C. A. Cary of Auburn, Ala., president; Dr. N. S. Mayo, Chicago, Ill., secretary; Dr. M. Jacob, Knoxville, Tenn., treasurer; and Dr. John R. Mohler of Washington, D. C., was elected editor and business manager of the journal of the Association, vice Dr. W. H. Dalrymple of Baton Rouge, La., resigned. The meeting was attended by about 500 members and 700 new members were elected. The next annual meeting will be held at Columbus, Ohio. The twenty-third annual meeting of the U. S. Live Stock Sanitary Association was held at Chicago, Ill., December 1 to 3.

VETERINARY EDUCATION. Due to the conditions attendant upon the war, there was a great decrease in the number of students enrolled at veterinary colleges in the United States, the total number of freshmen matriculated for the 1918-19 session being 264 against 338 for the preceding year. The combined attendance at all veterinary colleges in the United States was 1114, with 214 graduates, against 1841 in attendance and 867 graduates the previous year. A new school of veterinary medicine was established at the Georgia State College of Agriculture. A four years' course of study is now in effect at all accredited veterinary colleges, of which there are 17 in the United States and Canada.

APPROPRIATIONS. The annual appropriation bill for the work of the U. S. Department of Agriculture carried appropriations of \$1,500,000 for tuberculosis eradication work, an increase of \$1,000,000 over that of the preceding year; \$741,980 for cattle tick eradication; \$641,045 for the hog cholera work; and \$88,800 for dourine eradication. It was provided that \$100,000 from the supplementary fund of \$903,960 appropriated for meat inspection may be used for the inspection of horse meat. An increase in the salaries of some 3000 employees of the service and for overtime pay was provided for, the government to be reimbursed for the latter by the establishments receiving inspection.

BOVINE TUBERCULOSIS ERADICATION. Rapid progress was made in this work, as is shown in the new list of herds officially accredited as free from or which have passed one test with a view

to certification. This list, revised to April 1st, records a total of 782 herds containing 12,082 pure-bred and 6939 grade animals as accredited, and 6535 herds with 39,558 pure-bred and 57,685 grade animals as once tested without reacting. During the year the officials of 43 States actively cooperated with the Federal government in the work. Similar work was taken up by the Canadian government, the veterinary director general having promulgated regulations for the establishment and maintenance of tuberculosis-free accredited herds of cattle as fixed by order of council dated September 20th. The increased appropriation provides for an increase in the payment of indemnities to owners of tuberculous herds, such indemnity not to exceed that paid by the State and in no case to be more than \$25 for a grade or \$50 for a pure-bred animal. In September a referendum vote was held in Clay County, Miss., this being the first ever polled in the United States on the subject of controlling bovine tuberculosis. It was the outcome of a petition received by the county commissioners from farmers, stockmen, and others asking that a special election be held to decide whether tuberculosis eradication work should be undertaken and made compulsory. As a result of the vote, which was favorable, the work of county-wide testing and eradication was immediately undertaken.

In his annual report, the Chief of the Federal Bureau of Animal Industry called attention to the District of Columbia as an excellent example showing that the disease is vulnerable to a definite campaign of eradication. When tuberculin testing was undertaken in the District in 1907 more than 18 per cent of the cattle were found to be tuberculous, whereas in the year 1919 the percentage of reactors had been reduced to 0.63. With the disposal of the last reactors in 1919, the District of Columbia became practically a tuberculosis-free area.

That there is a decrease in the percentage of animals found to be affected with tuberculosis is shown by an analysis of the reports issued during the last three years by the U. S. Department of Agriculture. The figures based on post-mortem results at Federally inspected meat packing establishments at eight important market centres—Chicago, Kansas City, Omaha, South St. Joseph, St. Paul, Sioux City, East St. Louis, and Milwaukee—show that the percentage of animals condemned for tuberculosis for the year ended June 30, 1917, was 0.51 of the whole number slaughtered; for 1918 it had decreased to 0.38 per cent; and in 1919 to 0.32 per cent. The total number of cattle slaughtered in 1917 at the eight points mentioned was 5,966,824, and in 1919 this had increased to 6,995,735. A corresponding decrease took place in swine, the percentage condemned for tuberculosis at the same eight markets in 1917 being 0.244; in 1918, 0.199; and in 1919, 0.17.

CATTLE TICK ERADICATION. The work of tick eradication went rapidly forward. With the release on September 15th of an area of 3634 square miles and on December 1st of 46,921 square miles, a total of 509,084 square miles, or 70 per cent of the area originally placed under restriction, has been released as tick-free. The territory released during the year is divided among six States: Alabama leads the list with 12,991 square miles placed in the unrestricted area, followed by Louisiana with 9299; Texas

with 8847, Arkansas with 8130, Georgia with 6942, and Oklahoma with 4346 square miles. Active work went on in North Carolina and Florida in preparation for strong attacks in 1920. The poster system of disseminating information was adopted and gave very satisfactory results. Through its use a campaign for early dipping was made particularly effective, the dipping commencing in March. Five States have now passed State-wide compulsory dipping laws, Mississippi in 1917, the entire State being released from quarantine in December of that year. The Louisiana law became effective April 1, 1918, the Texas law in the first of its three zones on Jan. 1, 1919, the Alabama law March 7, 1919, and the Georgia law in December, 1919.

DOURINE ERADICATION. The eradication work with dourine has resulted in its complete elimination from Iowa and Nebraska, its nearly complete elimination from North Dakota and Wyoming, and a great reduction in Montana and South Dakota. Under the conditions met with on the Indian reservations in Arizona and New Mexico the work is much more difficult, though satisfactory progress was made. During the fiscal year ended June 30th, tests were made of 46,819 samples of serum from suspected stallions and mares, of which 1143 or 2.4 per cent gave positive reactions.

SCABIES. The work of eradicating sheep scabies resulted in the making of 22,394,561 inspections and the supervision of 10,518,196 dippings, or increases of 14 and 88.3 per cent, respectively, over those of the preceding fiscal year. Eradication work was practically completed in Michigan, and progress was made in Iowa where the infection was widely scattered through the introduction of feeder sheep. No cases of the disease are now known to exist in Montana or North Dakota. The considerable spread of the infection in Idaho following the outbreak of the previous year was brought under control. The island of San Clemente, Cal., was placed under quarantine on account of its prevalence.

In the work with cattle scabies 1,707,917 inspections were made and 935,539 dippings supervised, an increase of 46 per cent over the preceding year in the number of dippings. An extensive spread in Western Kansas was being brought under control, and in the new areas of infection in Southwestern New Mexico effective work was done. In Northwestern Texas and in Montana the disease was found to exist to a considerably greater extent than for several years.

ANTHRAX. In work against anthrax in the Gulf Coast region, about 30,000 animals were immunized in Southern Texas alone by agents of the Federal Bureau of Animal Industry. Morris in investigations at the Louisiana Experiment Station found that bloodsucking flies and mosquitoes are capable of transmitting anthrax by feeding upon a healthy animal after sucking blood from an infected one. It was also found that the house fly and the blue bottle and green bottle flies are capable of carrying anthrax infection to wounds of healthy animals after having fed upon or developed in anthrax-infected material.

HOG CHOLERA. It was found in investigations conducted by the Federal Bureau of Animal Industry that the stable fly in sucking blood on an infected animal takes up and harbors the virus of hog cholera, and that it may under favorable conditions convey the affection to

healthy animals. Negative results were obtained in experiments with the house fly, indicating that it is not an important channel in the conveyance of hog cholera from farm to farm.

FORAGE POISONING. This affection in horses, also known as cerebro-spinal meningitis and "Kansas horse disease," reappeared in Western Kansas and Eastern Colorado, causing the loss of several hundred animals.

EQUINE INFLUENZA. In coöperative work with the War Department, 507,559 horses and mules were inspected for influenza at the large horse markets by agents of the U. S. Department of Agriculture. Of these, 5341 were sent to isolation hospitals and such source of infection thus removed.

ASCARIDS. In work carried on by Ransom and Foster it was found that invasion of the lungs of pigs by the intestinal roundworm (*Ascaris lumbricoides* or *A. suum*) commonly causes pneumonia, the symptoms of which are popularly known as "thumps." Pigs which suffer from this affection may never fully recover but become unprofitable runts, weighing less than 50 lbs., and sometimes even less than 20 lbs. when they should weigh 100 lbs. The sum total of the loss throughout the country from this source is enormous. The work of the year, however, indicates that by proper methods of management such loss can be reduced on any farm to an inconsequential amount. These authors conclude that the *Ascaris ovis*, occasionally found in sheep, is merely the pig *Ascaris* in a strange host.

TRICHINÆ. Investigation carried on by Ransom and Schwartz has shown that the vitality of the larvæ of *Trichinella spiralis*, the cause of trichinosis, is quickly destroyed by exposure of the parasite to a temperature of 131° F. gradually attained, and this temperature they consider to be the thermal death point. This has led to the selection by the Federal Bureau of Animal Industry of 137° F. as the minimum temperature to which pork and products containing pork must be heated when cooked in establishments operating under the Federal meat inspection.

INSPECTION OF HORSE MEAT. The agricultural appropriation bill authorized the expenditure of \$100,000 in the inspection of horses slaughtered for food purposes. This was brought about by the growing demand for the utilization of the meat of the horse, there being many animals on the Western range too small or too wild to be of other use. Under the new regulation every establishment in which horses are slaughtered for the preparation of food products for transportation or sale in interstate or foreign commerce must be Federally inspected. The slaughter of horses and the handling of horse meat must be conducted in establishments separated from those in which other animals are killed and handled, and all horse meat and horse meat products must bear the inspection label. The fact that foreign governments will not import horse meat from the United States unless Federally inspected was one of the important reasons for the new regulation. The inspection provided for will open a market for the inferior animals, saving feed for cattle and sheep, adding hides to the leather supply and increasing meat stocks.

Bibliography. Among the new works published were the following: O. C. Bradley and T. G. Browne, *Atlas of the Anatomy and Physiology of the Horse* (London, 1918); R. A. Craig,

Common Diseases of Farm Animals (Philadelphia, 1919); R. Edelmänn, trans. by J. R. Mohler and A. Eichhorn, *Textbook of Meat Hygiene, with Special Consideration of Ante-mortem and Post-mortem Inspection of Food-Producing Animals* (4th ed., Philadelphia, 1919); G. S. Hopkins, *Atlas of the Viscera, in Situ, of the Dairy Cow* (New York, 1919); W. J. Howarth, *Meat Inspection Problems, with Special Reference to the Developments of Recent Years* (London, 1918); C. L. McArthur, *The Attenuation of Hog Cholera Virus and Its Effect upon Normal Hogs* (Arkansas Station Bul. 139, 1917); E. Peacey, *Common Diseases of Pigs and Their Diagnosis, including Swine Fever and Its Treatment with Serum* (London, 1918); L. F. Rettger, W. F. Kirkpatrick, and L. E. Card, *Bacillary White Diarrhea*.—VII, *Ovarian Infection of the Adult Fowl and Transmission of the Disease through the Oviduct* (Connecticut Storrs Station Bul. 101, 1919); C. G. Saunders, *Rabbit and Cat Diseases* (Chicago, 1919); A. W. Sellards, *The Principles of Acidosis and Clinical Methods for Its Study* (Cambridge, 1917); and R. H. Smythe, *Wounds of Animals and Their Treatment* (London, 1918).

VIADUCTS. See BRIDGES.

VICTORIA. A state of the Commonwealth of Australia, lying in the southeastern part of the continent with New South Wales on the north and South Australia on the west; next to Tasmania the smallest of the Australian states. Area, 87,884 square miles; population estimated Jan. 1, 1918, at 1,411,004, being the largest population of the states of the Commonwealth with the exception of New South Wales. Capital, Melbourne, which is also the temporary capital of the Commonwealth, with a population including suburbs, at the beginning of 1918, 708,240. Other large cities are Ballarat (40,404), Bendigo (35,640), and Geelong (34,937). Legislative power is vested in a parliament of two houses, the former having 34 members elected for six years and the latter 65 members elected for three years or for the duration of the Parliament. Governor at the beginning of 1919, Sir A. L. Stanley; prime minister, H. S. W. Lawson. See AUSTRALIA.

VIRGINIA. POPULATION. The population of the State in 1910 was 2,061,612, and on July 1, 1919, it was estimated to be 2,255,036, a gain during the last 12 months of 11,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	1,600,000	44,800,000	\$75,712,000
	1918	1,600,000	44,800,000	71,680,000
Oats	1919	240,000	5,280,000	5,280,000
	1918	225,000	5,175,000	5,175,000
Wheat	1919	1,060,000	12,508,000	28,018,000
	1918	1,050,000	12,600,000	27,594,000
Rye	1919	72,000	828,000	1,408,000
	1918	80,000	960,000	1,680,000
Tobacco	1919	230,000 a	131,100,000	62,141,000
	1918	215,000 a	165,550,000	44,698,000
Hay	1919	1,100,000	b 1,650,000	39,105,000
	1918	1,050,000	b 1,418,000	32,614,000
Peanuts	1919	139,000	5,282,000	14,420,000
	1918	140,000	5,775,000	11,723,000
Potatoes	1919	121,000	11,495,000	18,047,000

FINANCE. The fiscal year of the Commonwealth ended Sept. 30, 1919. The receipts amounted to \$13,035,022 and expenditures were \$12,651,785. The following is the standing of the public debt as of Oct. 1, 1919:

Riddleberger bonds, 3's, due 1932	\$5,166,954
Century bonds, 2-3's, due 1992	14,835,225
School and college certificates	2,467,605
Old and unfunded	442,430
	<hr/>
	\$22,912,215

EDUCATION. The latest available report is that for the school year 1917-18. The balance in the school funds on July 1, 1917, was \$1,034,495, and on June 30, 1918, it was \$1,042,804; the receipts for this period were \$9,163,672 and the expenditures amounted to \$9,155,363. The total salaries of teachers was \$5,162,469. The school population was 658,926, of which 222,413 were negroes. The school enrollment was, negroes 132,316, whites 348,918. The average daily attendance was, negroes 82,631, whites 234,725. The percentage attendance based on school enrollment was, negroes 62, whites 67; based on school population, negroes 37, whites 53. The schools were this year in session an average of 7.3 months. There were 10,994 white teachers and 2910 negro teachers. The average annual salary of the former was, in counties, \$348.94, in cities, \$733.56; of the latter, in counties, \$182.94, in cities, \$461.10. The percentage of illiteracy was in the counties .055 and in the cities .002.

CHARITIES AND CORRECTIONS. The following institutions are controlled by the State: Penitentiary, Richmond; State Farm, Lassiter; Central State Hospital, Petersburg; Eastern State Hospital, Williamsburg; Southwestern State Hospital, Marion; Western State Hospital, Staunton; Epileptic Colony and Colony for Feeble-minded, Madison Heights; Sanatorium for Incipient Tuberculosis, Catawba; Sanatorium for Negroes, Burkeville; School for the Deaf and Blind, Staunton; School for Colored Deaf and Blind, Newport News; Laurel Industrial School, School, P. O.; Industrial Home School for Wayward Colored Girls, Peaks Turnout; Home and Industrial School for Girls, Bon Air; Soldiers' Home, Richmond. The cost of the maintenance of these institutions is about \$4,000,000.

OFFICERS. Governor, Westmoreland Davis; Lieutenant-Governor, John Buchanan; Secretary of State, B. O. James; Treasurer, Chas. A. Johnson; Auditor, C. Lee Moore; Attorney-General, J. R. Saunders.

JUDICIARY. Supreme Court of Appeals: President, Stafford G. Whittle; Judges, Robert R. Prentiss, Joseph L. Kelly, Frederick W. Sims, Martin P. Burks.

VIRGINIA, UNIVERSITY OF. A State institution for the education of men, at Charlottesville, Va. The enrollment for the summer of 1919 was 1474 and for the winter term, 1482, with 71 professors in the faculty. Productive funds amounted to \$2,725,671, and the gross income was \$471,550. The library contains 115,000 books and pamphlets. In 1919 the School of Education was expanded into the Curry Memorial Department of Education. There was established the McIntire School of Fine Arts, through the gift of \$150,000 from Paul Goodloe McIntire. The university was founded in 1819. President, Edwin Anderson Alderman, LL.D.

VIRGIN ISLANDS. A group of small islands east of Porto Rico part of which belong to the British colony, the Leeward Islands (q.v.), and part to the United States. The American Islands are St. Thomas, St. Croix, St. John, Vieques, and Culebra, of which the three former with some 50 smaller ones, formerly the Danish West Indies, were purchased by the United States from Denmark and were formally transferred on March 31, 1917. No later statistics are available than those given by the preceding YEAR BOOK.

VIRIDITE. See MINERALOGY.

VITAL STATISTICS. Analysis of the bibliography of this subject for 1919 shows that statistics were compiled by the Federal government, chiefly through the permanent activities of the Census Bureau, some of the various State governments and leading municipalities, the great insurance companies, certain large hospitals, societies whose work comprises demography (as the American Public Health Association), and the periodicals issued by them; and private initiative. At least one good sized monograph on Vital Statistics appeared during the year by G. C. Whipple, publisher Wiley. The usual subjects were covered in 1919, and in addition some that were outgrowths of the great war and influenza pandemic. War statistics have to do chiefly with the defective physique of the drafted man and the effects of underfeeding in some of the warring countries. Of the perennial topics the increase in population and the distribution of population may be first mentioned. The Federal Census Bureau which estimates the population annually between censuses has reached the year 1918—that is has completed the year 1917. Mortality statistics have to do especially with the deaths among insured wage earners, the report of the Metropolitan Life Insurance Company, which covers a term of years, having recently been issued. The government has also published the principal causes of death in the U. S. Registration Area and the two sets of figures may be instructively compared. The deaths in those above 40 and the combined mortalities from influenza and pneumonia in the pandemic have been specially discussed during the year. Another paper deals with the general epidemic waste of human life. Under birth statistics we find accounts of the male births during the war, the ratios between birth and infant mortality—which usually vary directly with each other—the still births and the illegitimate births. Marriage statistics are not a prolific subject but the Census Bureau has issued a report on marriage and divorce and an article was published on the relation between occupation and marriage. This subject is timely, for some large business establishments see so many weddings among their employes and employees that they are spoken of as "marriage bureaus." A subject not represented is the desertions of wives by husbands. The statement is sometimes heard that the State dare not publish the full number of desertions for fear of contagion of the practice, but the severe penalties for desertion would seem to have borne fruit. Morbidity statistics are represented by reports of municipalities on the notifiable diseases recorded and one of these covering many cities was issued by the New York Health Department during the past year, along with mortalities. Various papers refer to the statistics of institutional defectives and

insane, epileptics and inebriates, while physical defectives have had a census of some sort. But a single paper on health censuses appeared. Many articles are published on the technics of vital statistics, such as the interpretation of the death rate by the climograph.

We extract a few data from the Report of the Director of the Census. Beginning 1915 the Census Bureau has made annual collections of birth statistics from an increasing registration area. The area now comprises over half the population (53 per cent) of the country and 20 States with the District of Columbia. No changes have been made since 1917, as Illinois and Mississippi failed to qualify in 1919. In 1917 the births amounted to 1,353,792 or 24.6 per 1000 population. The deaths corresponding were 776,222 or 14.1 per 1000. Better figures will not be forthcoming until certain legislation is secured. Birth registration is far behind death registration, for the area of the latter embraces 31 States and enough other peoples to make up 80 per cent of the total population. The difficulty with the increase of the birth area is bound up in the insufficiency of State legislation to bring the total registration to the desired 90 per cent of efficiency. The Director recommends that the Federal government take over the task at once as many years must elapse before the 48 States can perfect State legislation.

VOCATIONAL EDUCATION. See AGRICULTURAL EDUCATION; and EDUCATION IN THE UNITED STATES.

VOCATIONAL INSTRUCTION, FEDERAL BOARD OF. See EDUCATION IN THE UNITED STATES.

VOLCANOES. An eruption of Kloet or Kalut, one of the smaller volcanoes on the island of Java, inflicted a terrible disaster upon the inhabitants of that island, May 19-20, 1919. The eruption came suddenly and with overwhelming violence, somewhat like the outburst of Mont Pelée which destroyed St. Pierre in 1902, causing a loss of life first placed at 7000 and on later and fuller investigation at over 40,000. It was thus one of the most devastating volcanic cataclysms on record. About 20,000 acres of plantations, mainly devoted to sugar and rice crops, were laid waste in the deluge of ash and mud which overran 12 villages and 20 miles of railroad. The district was densely populated, which with the suddenness of the outburst accounted for the heavy toll of life. According to the rather meagre accounts of the event that have come through Dutch channels, the volcano gave little warning of the impending eruption, but in the evening of May 19th released its energies with a tremendous explosion that blew away a part of the crater wall and released a deluge of water from the lake which occupied the interior of the cone. The ash from the comminuted rock, and the ejected water, spread rapidly over the country, converting the verdant fields into a gray waste of mud that soon developed a firm consistency. It would appear that many of the victims were entombed in this semi-liquid torrent. The outpouring of ash was mainly directed to the side where the crater was breached by the first eruption, as happened also in the Mont Pelée disaster, thus limiting the field of devastation. Kloet is a periodic vent, the last previous eruption having occurred in 1901.

KATMAI NATIONAL PARK. The region about

Katmai volcano on the Alaskan Peninsula has been set apart as a National Monument, as result of the remarkable features that have been brought to light by the National Geographical Society's expeditions under R. F. Briggs. The display of secondary or fumarolic activity as developed in innumerable outlets of steam, gas, and hot water has no parallel in any other volcanic district of the present day; it finds apt description in the name, "Valley of Ten Thousand Smokes" applied by the exploring parties who brought back a very complete account of their discoveries. The fumaroles are the result, doubtless, of the eruption of 1912-13. They afford an attractive field of investigation with regard to the processes involved in the later stages of volcanism, about which further information may be anticipated.

VOLHYNIA. A government of the former empire of Russia situated in West Russia east of Poland and Galicia and forming part of the new state of Ukraine. Area 27,699 square miles; population estimated Jan. 31, 1913, 4,241,800, the majority of whom are Little Russians. Capital, Zhitomir, with a population before the war estimated at 96,800.

VOLUNTEERS OF AMERICA. This organization was founded in 1896 for purposes of Christian, social, and philanthropic work in the United States. The organization is similar to the United States army, but the spirit is purely democratic. A report for 1919 shows the work during the year. One of the most important and also practical branches of the work undertaken by the Volunteers in a number of large cities has been the effort for the aid, protection, and uplift of the working girl. During the year 35,218 lodgings were furnished women free, 20,691 were paid for, and 27,462 lodgings were furnished children, exclusive of much outside help. Very valuable work has been done in organizing the recreation of the poorer classes, and helping them to better their positions. Institutions for children have been opened in Portland, Los Angeles, Chicago, Boston, New York, New Orleans, and other centres for the purpose of receiving city children, where they are properly fed and clothed. They are taken for outings in many cases, as also many thousands of mothers.

The Volunteer Hospital in New York City did valuable work during the year. There were 4753 pay-patients treated, 4269 public charge day-patients, and 2272 free day-patients, making a total of 11,294 day-treatments in the wards. In the Dispensary there were 12,342 new cases treated, and 22,258 old cases, making a total of 34,601 treatments, surgical and medical during the year. There were 3581 Ambulance calls, the majority of which were the result of severe accidents involving major operations.

Mrs. Ballington Booth has done valuable work with the Prison League, of which she was the founder, 20 years ago. Five hundred men and women are constantly on the parole books of the League. It has a membership of 15,000, having aided over 100,000 men and women. One thousand of the members served for the United States in the world war.

During the year there were 8383 open-air services held, and attendance at wayside services totaled 2,287,985 persons. At Christmas time the Volunteers attempt to provide Christmas dinners for the poor of the large cities, having

distributed in 1919 many thousands baskets of food.

During the war, the Volunteers rendered valuable service abroad, a summary of which will be found in the *NEW INTERNATIONAL YEAR BOOK* for 1918. The executive offices of the organization are at 34 W. 28th St., New York City.

VORARLBERG. An Alpine province of the former Austro-Hungarian Empire constituting a crownland of Austria, with an area of 1005 square miles and a population (1910) of 145,408, of whom 132,908 were Austrian subjects. The German-speaking element constituted 95.36 per cent of the population. Capital, Bregenz.

WAGES. See LABOR; MINIMUM WAGE; UNEMPLOYMENT.

WALES. A division of the United Kingdom lying west of Central England with the Irish Sea on the north and the Bristol Channel on the south. Area, 7466 square miles; population (1911), 2,025,202. See GREAT BRITAIN.

WALKER, CHARLOTTE (Mrs. EDUARD DE KOMLOSY). An American operatic soprano, died at Hillside, N. J., August 1. She was born at Westfield, N. Y., in 1860. She became prominent as one of the stars in Thomas's American Opera Company (1886-88). In 1902 she married the portrait painter de Komlosy, and lived in Vienna until her return to America in 1916.

WALKER, MARY E. Physician, died February 21, at Oswego, N. Y. She was born in Oswego, N. Y., in 1832; graduated at the Syracuse Medical College in 1855; practiced medicine at Columbus, Ohio, and later at Rome, N. Y. She entered the Northern Army during the Civil War as assistant-surgeon and was the first woman commissioned to serve on the staff of an army in time of war. The Congressional medal of honor was awarded to her for bravery and valuable service. She was a well known advocate of woman suffrage and of dress reform and throughout her life practiced the principles of dress reform herself.

WALLACE, Sir DAVID MACKENZIE. British journalist and author, died at Lymington, England, January 10. From 1891 to 1899 he directed the department of foreign affairs of the London *Times*. He was born in Dumbartonshire, Scotland, Nov. 11, 1841, studied at the University of Glasgow and Edinburgh, and made long tours on the Continent where he acquired great fluency in several modern languages, and studied at Paris, and at the University of Berlin and Heidelberg, taking the degree of doctor of laws at the last-named at the age of 28. He spent six years in Russia studying conditions, 1870-75, and published a book on *Russia* (1877), which was received with great favor and translated into many foreign languages, the French translation being crowned by the Academy. A little afterwards the *Times* engaged him as correspondent at Saint Petersburg, whence, however, he was transferred to Berlin during the peace conference, 1878. He then went to Constantinople and familiarized himself with the situation in the Balkan peninsula. He was an eye witness of Prince Alexander's *coup d'état* and was present at the trial of Midhat Pasha in Turkey. He next went on a special mission for the *Times* to Egypt, and published a work on *Egypt and the Egyptian Question*. He served as private secretary to the Marquis of Dufferin and the Marquis of Lansdown. In 1891 he was appointed to the foreign department of the *Times*

and he soon organized his work with great ability and did much to place that department on a solid footing. The wide range of his information and experience led to his selection as the editor of the *Encyclopædia Britannica*, when the *Times* acquired that work and undertook to bring it down to date. After that he took little share in daily journalism, though he represented the *Times* at the peace conference at Portsmouth in 1905. In addition to the works mentioned above, he wrote in 1902 *The Web of Empire*.

WALLACE, JAMES N. American financier, died near Nyack, N. Y., on October 11. He was one of the prominent financiers in the United States, an important figure in banking and railroad circles. He was born at Wallingford, Conn., Jan. 3, 1864. He went into the Central Trust Company of New York as a clerk in 1882, and was rapidly advanced in that institution, of which he became president in 1905. He was successful in the reorganization of railroads and in other large financial enterprises, and he was one of the bankers called into service during the war, being a member of the United States Railroad Administration in the department of finance. At the time of his death he was director of many important companies in New York and vicinity. He was known for his extensive charities, having given away a large part of his fortune during his life.

WALLACHIA. The central and western division of Rumania, bounded on the north by Transylvania and Moldavia and separated by the Danube from Serbia on the west, Bulgaria on the south and the Dobruja on the east. It was formerly a principality and was united in 1861 with Moldavia to form the present state of Rumania. Area 29,916 square miles; population Jan. 1, 1913, 4,716,291. The largest city is Bucharest, the capital of Rumania, with a population in 1917 of 308,987.

WAR CAMP COMMUNITY SERVICE. During 1919 War Camp Community Service, organized by the Playground and Recreation Association of America in May, 1917, at the request of the government, to help the communities near the training camps to provide for the recreational needs of the men in training in their free time, continued to function until some time after the armistice had been signed. Over 600 communities have been organized to provide hospitality. Community activities of all kinds have been initiated; these have included community singing and drama, pageants, athletic meets, water sports, home hospitality, and the use of all existing facilities for the benefit of men. Over 500 Soldiers' and Sailors' Clubs either established by War Camp Community Service or affiliated with it were in operation, more than 60 of these being for the use of colored soldiers. Headquarters are maintained in New York. See COMMUNITY SERVICE; SOCIAL HYGIENE.

WARD, ARTHUR WILLIAM. Professor of Canning College at Lucknow after 1889. Died in 1919. He was born at Waterloo, Aug. 1, 1858, and educated at Liverpool College, Cambridge. He was the author of various scientific papers, and articles in the Indian press on education.

WARD, Sir JOSEPH GEORGE. New Zealand representative at the Paris Peace Conference. He had been for a long time one of the most distinguished New Zealand statesmen, holding

the position of leader of the Liberals and rising to the post of Prime Minister. He was representative of New Zealand in the British Imperial Conferences of 1907, 1909, and 1911. He joined Mr. Massey in 1915 in the formation of a coalition ministry in which he took the portfolio of finance. He represented New Zealand along with Mr. Massey in the Imperial War Cabinets of 1917 and 1918.

WAR FINANCE. This article is concerned with the flotation of war loans by some of the important countries. Such loans, while of course necessary to some extent even after the cessation of hostilities, naturally showed considerable reduction during the year 1919. Under **TAXATION** will be found an account of the other aspect of war finance. The reader is also referred to **FINANCIAL REVIEW**, the articles on the various countries, and the other articles connected with the war of the nations.

UNITED STATES. The five loans floated by the United States since 1917 were all oversubscribed. The amount allotted for the first loan was \$2,000,000,000, and \$3,035,000,000 was subscribed, with 4,000,000 subscriptions. The second loan was for \$3,000,000,000, but 9,400,000 subscribers brought total subscriptions to \$4,618,000,000. The third Liberty Loan, launched in April, 1918, when the outlook for the Allies was dark, had over 18,000,000 subscribers, and the allotment of \$3,000,000,000 was oversubscribed 38 per cent. With 21,300,000 subscribers, the enormous quota of \$6,000,000,000 for the Fourth Liberty Loan, in October, 1918, was oversubscribed 16 per cent. (See previous **YEAR BOOKS** for details of these loans.)

VICTORY LOAN. For the fifth or Victory Loan, the Secretary of the Treasury asked for only \$4,500,000,000 instead of the somewhat larger amount expected by most people. The bill passed the House Feb. 26, 1919, and the Senate on March 2d. The terms of the loan, aside from the smaller size of the issue, were all favorably regarded.

The notes were offered in two series, those which were tax-exempt (except for estate and inheritance taxes) bearing interest at 3½ per cent, and those subject to income surtaxes, excess profits and war taxes paying 4¾ per cent. Both classes were issued in denominations as low as \$50, either in bearer form or registered, and either series was convertible into the other. The notes were dated May 20, 1919, and mature on May 20, 1923; they are, however, redeemable at the option of the United States on June 15th or Dec. 15, 1922, in whole or in part at par and interest on four months' notice. This redemption provision, together with the prevention of a large oversubscription by scaling down allotments, were calculated to sustain the market. Payments were made in instalments covering six months. Subscribers numbered 12,000,000, and total subscriptions amounted to \$5,250,000,000, an oversubscription of about 15 per cent. Purchases in the open market by the Treasury and the War Finance Corporation of all Liberty Bonds were continued in order to stabilize the market, total purchases by the government up to Dec. 1, 1919, amounting to over \$1,000,000,000.

WAR SAVINGS STAMPS. The aggregate amount of War Savings Stamps and certificates authorized was increased in 1919 from \$2,000,000,000 to \$4,000,000,000. Tax exemption features were

the same as in 1918, and the sale and distribution of the stamps continued as before, the Treasury Department having assumed this as a permanent function. The 1919 campaign for the sale of a new \$2,000,000,000 issue was opened January 17th, with an army of sellers. A steady decline of sales in the early months was discouraging, but monthly returns later in the year, after the floating of the Victory Loan, were indicative of more thrift on the part of the people. Total receipts from the sale of war savings and thrift stamps for the first nine months of 1919 were \$135,846,000; the total for the 12 months in which they had been available was \$1,107,751,000.

CANADA. Official results of the 1919 Victory Loan in Canada show total subscriptions of \$682,032,000, with 830,602 subscribers. The subscription of the province of Ontario was \$355,739,000. The offering was for a minimum amount of \$300,000,000, and the government upon allotment accepted about \$650,000,000 of the amount subscribed, and was thereby put in a strong financial position. About \$50,000,000 was subscribed by the United States interests. The bonds were sold at par, paying 5½ per cent and maturing in five to 15 years.

GREAT BRITAIN. The issuance of the British National War Bonds was resumed on Feb. 1, 1919. The new issue provided for 5 per cent bonds (subject to income tax) running for five and 10 years, and 4 per cent bonds (income tax compounded), running for 10 years. The 5 per cent bonds were issued at par, those maturing in five years redeemable at 102, and the 10-year bonds at 105. The 4 per cent bonds were issued at par, redeemable at par. These bonds were also offered in Canada.

Total subscriptions to the British Victory Loan or "Joy Loan" were £708,000,000, of which £539,000,000 was new money. Subscriptions to the respective issues—the 4 per cent Funding Loan and the 4 per cent Victory Bonds—were opened June 16th and were received up to July 12th. The Victory Bonds were issued at 85, and the 4 per cent Funding Loan at 80. Sinking funds were provided for the payment of both loans. Treasury bills, exchequer bonds, and National War Bonds were convertible into the new loans.

The British Treasury Bills continued to be offered in the United States throughout the year by J. P. Morgan & Co., the rate changing from 5½ to 6 per cent.

According to a statement made in the House of Commons in May, the approximate war expenditures of British colonies and dominions up to Mar. 31, 1919, were as follows: Canada, £255,454,000; Australia, £291,000,000; New Zealand, £75,750,000; South Africa, £32,950,000; Newfoundland, £1,880,000.

LOANS IN OTHER COUNTRIES. A Peace Loan of £25,000,000, bearing 5 per cent interest, was issued in Australia in August by the Commonwealth Bank. Previous to this, Australia's war loans totalled £187,000,000.

British India floated in July a 5 per cent loan of unlimited amount, payable not earlier than 1945 nor later than 1995. The bonds issued were free from all Indian income taxes, and all Indian war bonds previously issued were receivable at par for subscriptions.

Germany announced in October the issuance of a premium loan to the amount of five billion

marks, the interest on which is payable only with the principal on the redemption of the loan. Inducements were offered to the purchasers of the issue, in the form of bonuses and drawings, with a number of prizes of 1,000,000 marks.

The financial year in France was not marked by any large popular loans. The Bank of France, holding the monopoly of note issue, was obliged to make large advances to the government, thus multiplying French paper money, which is used for everything down to the value of five francs, beyond all normal needs of currency. One of the most frequent criticisms directed against the financial policy of the government has been its delay in issuing a consolidation loan. It is argued that this would reduce the floating debt, with its persistent charges, and moreover furnish government money for a time and cut down to that extent the great volume of currency, which is one of the causes of the rise in prices.

A Spanish bond issue of 1,656,000,000 pesetas (one peseta normally equal to \$0.193), sold at 75½ and paying 4 per cent, was immediately oversubscribed approximately five times.

A 6 per cent loan floated by Netherlands and Netherland Indies in July, calling for 180,000,000 florins or about \$72,000,000, was oversubscribed to the extent of 61,000,000 florins. The bonds were sold at par, and are redeemable in 40 years.

Since the armistice the Belgian government has assumed interprovincial loans aggregating 2,347,800,000 francs, issued during the war for payment of war taxes imposed by the German Military Government. The Peace Treaty provides that these forced loans are to be included in the total claim for reparation. An internal loan for 3,040,000,000 francs was issued at par in the form of 5 per cent three-year Treasury Bonds, chiefly for the purpose of retiring German marks from circulation in Belgium. The Belgian government has already received 5 per cent Treasury notes of the German government in part compensation for marks issued during the German military occupation. A "reconstruction loan" was issued in Belgium for 1,450,000,000 francs, in the form of 5 per cent bonds at 95, redeemable by a sinking fund in 49 years.

LOANS TO ALLIES. Loans to foreign governments by the United States aggregated very nearly \$10,000,000,000 at the close of the year 1919. Over \$4,000,000,000 had been loaned to Great Britain, about \$3,000,000,000 to France, and over \$1,600,000,000 to Italy. Other loans included Belgium, Cuba, Czecho-Slovakia, Greece, Liberia, Rumania, Russia, and Serbia. Practically all these loans were in the form of short-term notes at an average interest rate of 5 per cent. Due to chaotic conditions in Europe, interest payments in many cases were deferred for some time. The matter of funding the issues into long-term loans was also given some consideration.

According to a statement made by Secretary of the Treasury Glass in January, 1920, the United States has since the armistice extended financial assistance to foreign governments in the following forms: Direct advances, \$2,380,891,180; funds made available to those governments through the purchase of their currency to cover expenditures of the United States in Europe, \$736,481,587; army and other governmental supplies sold on credit (approximate), \$685,000,000; relief (approximate), \$100,000,-

000; unpaid accrued interests up to Jan. 1, 1920, on allied government obligations, \$324,211,922.

WAR FINANCE CORPORATION. For the purpose of supporting banking and industrial credit during the war, the War Finance Corporation was established early in 1918. The plan was advocated by Secretary of the Treasury McAdoo before the Senate Finance Committee on February 9th, and after consideration in Congress the bill was approved by President Wilson on April 9th. The bill provided for a corporation with \$500,000,000 capital, subscribed by the government, and authorized to issue \$3,000,000,000 of notes toward enterprises deemed essential to the prosecution of the war. Discount of the corporation notes at the Federal Reserve Banks was provided for, but the corporation notes were not to be available as a basis for the issue of Federal Reserve notes. In the same bill the Capital Issues Committee was created, whose duty it was to investigate and determine whether issues of securities by private concerns were "compatible with the national interest."

The outstanding feature of the activities of the corporation during 1919 was its \$200,000,000 bond issue in April. The bonds, the first to be issued by the corporation, were put on sale at par and interest through the Federal Reserve Banks as fiscal agents. They were issued in denominations of \$1000, in bearer form, to run for one year from Apr 1, 1919, bearing interest at 5 per cent, payable semi-annually. Quoting from the circular of the Federal Reserve Bank of New York, announcing the offering, the bonds were "exempt, both as to principal and interest, from all taxation now or hereafter imposed by the United States, any State, or any of the possessions of the United States, or by any local taxing authority, except (a) estate or inheritance taxes, and (b) graduated additional income taxes, commonly known as surtaxes, and excess profits and war profits taxes, now or hereafter imposed by the United States, upon the income or profits of individuals, partnerships, corporations, or associations." The interest on not exceeding \$5000 of the bonds is exempt from the taxes in clause B.

Eugene Meyer, Jr., who succeeded W. P. G. Harding as Managing Director of the corporation on January 29th, the latter having resigned in order to give his entire time to his duties as governor of the Federal Reserve Board, is said to have stated on April 1st that the proceeds derived from the sale of the bonds would be used for general purposes of the corporation. Advances to railroads were continually taking large sums, and it was expected that considerable amounts might be needed to finance foreign trade.

Reports from Washington on April 3d to the effect that the issue had been oversubscribed were immediately denied by the New York Federal Reserve Bank. Owing to these reports of over-subscription, many bankers are said to have been left with large blocks of the securities on their hands after the subscription books had been closed on April 9th, in spite of Director Meyer's announcement that the distribution of the issue had been entirely successful, there having been a large number of small purchasers. The bonds were admitted to the New York Stock Exchange List on May 29th.

In August, 1919, the corporation was reported

to be buying in its own bonds from the open market. Notices were received by the Federal Reserve Banks to the effect that the corporation would immediately redeem any of its bonds at 99.15.00. Loans to railroads and investment in government securities had been practically the only uses of the funds, and for this reason a considerable loss on the issue was expected, since the bonds bore 5 per cent interest, and seldom was more than 4½ received from the use of the funds. The extent of investment in government securities is shown by a statement made in June that in an attempt to stabilize the market for Liberty Loan obligations, the corporation up to May 31st had bought \$905,149,000 par value of different Liberty Bonds. About two-thirds of these had been resold prior to May 31st.

Announcement was made at Washington August 22d that out of a total of loans of \$306,083,513 disbursed up to August 12th, there had been repaid \$200,285,523, leaving a total outstanding balance of \$105,797,990. The loans had been made largely to railroads and public utilities, and to a lesser extent to industries and cattle-growers. Advances outstanding October 18th to cattle-growers of the Southwest amounted to \$3,182,346, the payment of these loans being called for soon after that date since the corporation then desired to liquidate its loans and wind up its affairs as soon as possible.

In response to a resolution of the Senate on October 3d calling for information concerning the corporation, Angus W. McLean, acting managing director at that time, reported the following facts: There were 28 people in the employ of the corporation, and this number was being reduced. The total compensation of these employees amounted to \$6,229.83 per month. All expenses were being paid out of earnings, and the corporation expected to return a substantial amount to the Treasury upon the winding up of its affairs.

WAR GARDENS. See AGRICULTURAL EXTENSION WORK.

WAR INDUSTRIES BOARD. The purpose of the War Industries Board was to coordinate and concentrate control over the industries of the country in order that the requirements of the war might be met with the greatest efficiency. When the war came to an end, the necessity for its existence no longer remained and on Dec. 31, 1918, the War Industries Board was officially dissolved and its activities terminated by order of President Wilson. Most of the divisions of the board had already completed their work and had disbanded. The executive order, however, made provision for the continuance of certain of the board's activities by other departments of the government. Arrangements were made that the War Trade Board take over the duties and powers of the Division of Planning and Statistics of the War Industries Board. Provision was made also for the assumption of the powers and duties of the Wool Division of the War Industries Board by the Bureau of Markets of the Department of Agriculture, until the uncompleted affairs of the Division had been disposed of. The Price Fixing Committee of the Board was to perform its functions until all of the prices fixed by the committee and not expiring by Jan. 1, 1919 had expired. All other sections and committees of the Board which could not be dispensed with

by Jan. 1, 1919, were transferred to the War Trade Board, together with the necessary officials, employees, records and papers. The expense of operating sections, continued under the War Trade Board for a limited period, were to be paid out of the appropriation of the War Industries Board. In no event were the sections to continue longer than the proclamation of peace. By the President's order, therefore, the War Industries Board existed, after Jan. 1, 1919, only for the purpose of winding up its affairs, arranging its papers and records, and disposing of its property and effects.*

Early in January the Department of Commerce announced that it had established the Industrial Cooperative Service and the Waste Reclamation Service. These new branches of the Department of Commerce will continue the work performed by the Conservation Division, the War Prison Labor and Waste Reclamation Service of the Labor Division of the War Industries Board. Most of the former heads of the Board consented to serve in the Industrial Cooperative Service as unofficial advisers of the Secretary of Commerce. Mr. A. W. Shaw, formerly chairman of the Conservation Division of the Board, supervised the transfer of the work of that Division to the Industrial Cooperation Service and Mr. Hugh Frayne, formerly chairman of the Labor Division, helped in organizing the Waste Reclamation Service. Through these new important services, the Department of Commerce aims to assist and develop the industries of the country in every practical way and to enter upon a greatly enlarged sphere of usefulness to the commerce of the country. The Industrial Cooperation Service will deal with the problems of commercial standardization, the prevention of industrial wastes, the discontinuance of harmful trade practices and similar problems. See WAR TRADE BOARD.

WAR LABOR POLICIES BOARD. The War Labor Policies Board which was created on May 13, 1918 (see YEAR BOOK for 1918), for the purpose of "developing policies for unified labor administration and to coordinate the various and frequently inconsistent methods of governmental departments which are dealing with labor problems involved in production," was finally dissolved in February, 1919. Its staff had been greatly depleted by the granting of indefinite leaves of absence, and the work that fell to its care, gradually decreased from the time of the signing of the armistice; the final impetus toward its disbandment was furnished when the Labor Appropriations Bill failed to pass, and the funds that were necessary for its support were no longer forthcoming. The actual work accomplished during its brief life in the year 1919 was negligible.

Since the work of the War Labor Policies Board was largely of a formulative and advisory nature, it is hard to attribute specific accomplishments to its efforts; it is perhaps for this reason that its achievements have been very generally underestimated. The work of the board may be divided into four main fields: 1. The formulation of uniform policies for war labor administration, and the coordination of

* By executive order July 22, 1919, all the records and files of the War Industries Board were turned over to the Council of National Defense to be catalogued for permanent record. These records will be distributed to permanent departments most interested in them.

governmental agencies connected with this problem: 2. The promotion of conferences for the equitable settlement of labor disputes; some of its most important contributions were in this connection; 3. The planning of preliminary work on reconstruction, a line of endeavor which gave promise of yielding rich reward, but which was effectually checked, first by the change in the balance of power in Congress—the result of the November elections—and finally by the President's message to the new Congress; 4. The compilation of data concerning labor standards, and the formulation of recommendations on the basis of such information.

At the time of its dissolution, the War Labor Policies Board was chairmanned by Mr. Felix Frankfurter of the Harvard Law School, and Mr. George M. Bell was its Executive Secretary.

WAR OF THE NATIONS. The present article deals with the proceedings of the Peace Conference and the various questions which came before it or to which its decisions gave rise. The text of the Covenant, the official summary of the Treaty with Germany, and brief accounts of the Treaties with Austria and Bulgaria will be found at the end. For the principal military operations of the year, see *RUSSIA, History*.

PEACE CONFERENCE

MEETING OF THE CONFERENCE. Before the meeting of the Conference at Paris the preliminary work had been done by the Inter-Allied Supreme War Council which had directed the operations that brought the war to a close. There had also been informal meetings of the President and Secretary of State of the United States, the Prime Ministers and Foreign Ministers of France, Great Britain, and Italy, and the Japanese ambassadors to France and England. The preliminary constitution of the Conference having been determined by these bodies, the Conference began its sessions in Paris on January 18th. The rules for membership provided that the five great Allied Powers subsequently known in newspaper discussion as the "Big Five," the United States, the British Empire, France, Italy, and Japan, should participate in all meetings and commissions; that other Powers with particular interests, namely, Belgium, Brazil, the British dominions and India, China, Cuba, Greece, Guatemala, Haiti, the Hejaz, Honduras, Liberia, Nicaragua, Panama, Poland, Portugal, Rumania, Serbia, Siam, and Czechoslovakia, should take part in the sittings that dealt with questions concerning them; and that still other Powers, including neutral states, and states in process of formation, should send representatives to the Conference in response to summons whenever matters arose that affected them.

The following Powers were represented: The United States, France, Great Britain, Italy, and Japan with five members each; Brazil with three members each; Belgium, China, Greece, the Hejaz, Poland, Portugal, Rumania, Serbia, Siam, Czechoslovakia, Australia, Canada, South Africa, and India with two members each; and the remainder with one member each, namely, Cuba, Guatemala, Haiti, Honduras, Liberia, Nicaragua, Panama, Bolivia, Ecuador, Peru, Uruguay, and New Zealand. The principal personages from the respective countries reported in attendance at the opening sessions, though not all with seats, were as follows: The United States: President Wilson; Robert Lansing;

Henry White; Col. E. M. House; Gen. Tasker H. Bliss. France: Georges Clemenceau; Stephen Pichon; Louis Lucien Klotz; André Tardieu; Jules Cambon; Léon Bourgeois. Great Britain: Lloyd George; Arthur J. Balfour; Bonar Law; Mr. Barnes. Italy: Vittorio Emanuele Orlando; Baron Sidney Sonnino; Gen. Count Mario di Robilant; Marquis Salvago-Raggi; Antonio Salandra; Salvatore Barzilai. Japan: Marquis Saionji; Baron Makino; Viscount Chinda; Mr. Matsui; Mr. Ijuin. British Dominions—Canada: Sir Robert Laird Borden; Sir George E. Foster; Charles Joseph Doherty.—Australia: William Maurice Hughes and Sir Joseph Cook.—New Zealand: William Ferguson Massey; Sir Joseph George Ward.—Union of South Africa: Gen. Louis Botha; Gen. Jan Smuts.—India: Edwin Samuel Montagu; Sir Ganga Singh, Maharajah of Bikaner; Sir Satyendra Prassano Sinha; Sir Alfred Hamilton Grant. Belgium: Paul Hymans; Emile Vandervelde; M. Van den Heuvel. Brazil: Olyntho de Magalhães; Epitacio Pessoa; Pandia Calogeras. Czechoslovakia: Dr. Karel Kramarzh; Dr. Edward Benesh. Greece: Eleutherios Venizelos; M. Politis. Poland: Roman Dmowski. Portugal: Dr. Egas Moniz. Rumania: Jean Bratiano; Nickolas Misu. Serbia: Nickola Pashitch; Dr. Ante Trumbitch; Dr. Vesmitch. Brief biographical notes will be found upon each of the above under their own titles, with the exception of President Wilson, M. Clemenceau, and Mr. Lloyd George, whose biographies have been carried in recent issues of the *YEAR BOOK*.

At the first meeting President Poincaré of France delivered an address at the conclusion of which the French Prime Minister, M. Clemenceau, was unanimously elected permanent chairman; the Russian situation was considered; and the Prinkipo proposal came up for discussion (see *RUSSIA, History*). This meeting was purely preliminary. There were subsequently five plenary meetings down to the signing of the German Treaty, beginning with that of January 25th. The executive of the Conference, known as the Supreme Council or Council of Ten, consisted at first of the ranking delegates of the five chief Powers, but on March 25th its authority was transferred to an executive Council of Four, termed in the newspapers the "Big Four," and consisting of President Wilson and the three Prime Ministers, Clemenceau, Lloyd George, and Orlando.

LEAGUE OF NATIONS. At the second meeting of the full Conference, January 25th, a resolution was unanimously adopted for the creation of a League of Nations, and a committee was appointed to draft a constitution for it. The committee consisted of two representatives of each of the five great Allied Powers, and five representatives appointed by the others. The 10 representatives of the Great Powers were: United States, President Wilson and Colonel House; France, M. Bourgeois and M. Larnaude; British Empire, Lord Robert Cecil and Lieut. Gen. J. C. Smuts; Italy, Signor Orlando and Senator Scialoja; Japan, Viscount Chinda and M. Ochiai. The sessions of the committee on the League of Nations which began February 4th, revealed a firm belief that the return to the old system of the balance of power was impossible, and that the creation of a new organ such as the League was expected to be absolutely indispensable. It was argued also that the inter-

course of nations could no longer be entrusted solely to specialists who from the nature of their work were cut off from public opinion and from other departments of government. The first discussions of the League seemed to indicate that the project would aim rather at removing the deeper causes of war than at preventing an actual outbreak of war. President Wilson returned to the United States on February 14th, where he laid the proposal of the League of Nations before the public and before Congress, presenting arguments for it, and hearing objections. The chief difficulty that first presented itself, according to the reports, was the question of sanction, that is to say, the means which the League should have for enforcing its decisions. Here there was wide divergence of view, the French advocating the vesting of the League with the right to employ armed force in the execution of its decrees, and the American and British legations favoring more limited powers. A compromise was reached on February 13th upon a draft of the constitution, which was reported unanimously to the Conference on the following day. The committee then adjourned until after President Wilson's return to Paris, when (March 18th) it resumed its sessions, and heard the representatives of neutral nations on the subject of the proposed constitution of the League. On April 10th, through the efforts of President Wilson, the committee agreed that the Covenant should not disturb present understandings for the maintenance of peace, such as the Monroe doctrine, this change being made in order to meet the criticism advanced during the President's visit to the United States. There had been much discussion as to the place for the headquarters of the proposed League of Nations. Brussels was put forward as the most suitable capital in view of Belgium's part in the war, but opinion inclined in favor of Geneva and on April 12th it was announced that Geneva had been selected by a vote of 12 to six. The committee on the League of Nations completed its work in April, agreeing upon a draft which corresponded closely to the outline published by General Smuts at the end of the preceding year. In the form in which it was discussed throughout the year 1919, it will be found below under *Covenant*.

COMMITTEES. Committees on responsibility for the war, reparations, international labor legislation, and regulation of ports and communications were also created on the same basis as that of the League of Nations committee. These committees thereupon entered into action. A large body of experts, including many from the United States, were at hand to give advice in the different fields of work. The Supreme Council applied itself at first chiefly to the consideration of the disposal of the German colonies, the settlement of the Shantung question between China and Japan, and the question of Balkan boundaries. Other special bodies of importance created early in the Conference (February 15th) were: The Supreme Economic Council, the Economic Drafting Commission, and the Final Drafting Commission, the first having charge of matters pertaining to the apportionment of shipping and of raw materials, the blockade, and the more pressing financial problems; the second, having charge of the restoration of economic intercourse, and equal trade conditions among the Allies; and the third, having charge of the enemy financial

resources. Some of the best known men of Europe and America in financial circles were engaged on these commissions.

RELATIONS WITH THE PRESS. On January 16th, the President of the United States and the prime ministers and foreign secretaries of the other powers, along with the Japanese ambassadors in Paris and London, met at the Quai d'Orsay to consider the relations with the press, and it was decided to call a meeting of the Allied press representatives for an interchange of views. On January 18th, an official statement was published in regard to the question of publicity. This was to the effect that the representatives of the Allied Powers desired that the public through the press should have the fullest information compatible with the supreme interest of all; but that publicity in regard to preliminary discussions must be subject to limitations. It was decided also that at the full meeting of the Conference representatives of the press should be admitted, but that, whenever necessary, deliberations might be held with closed doors. Comment of the newspapers from the first indicated that the interests of the press were not sufficiently respected by the rules of the Conference. It was not enough that leading delegates should periodically hold meetings with all the representatives of the press. It was said that for the regular guidance of the press each delegation should have some adequate and well-informed authority to co-operate with it. Criticism in regard to the measures taken for publicity continued throughout the Conference. The newspapers complained that the Conference leaders seemed not to understand the value or meaning of publicity. They were accused of blundering and trickery, and the bad state of affairs was attributed to jealousies and ignorance. At the outset the representatives of the press made a vigorous effort to secure better results. The leaders of the Conference seemed not to understand that their peoples really desired prompt news in regard to the Conference. Mr. Lloyd George as well as others was accused by the British press of impeding publicity.

EARLY SESSIONS. It was apparent early in the sessions of the Peace Conference that the question of freedom of the seas would have to be determined by the League of Nations, if such a body were created, and it therefore did not figure separately in the discussions. One of the first points to come before the Peace Conference was the policy of creating mandates for the former German colonies and for other territories not capable of self-government. The principle of creating mandatories over German colonies met with some opposition. For example, the Australian representatives demanded that the islands formerly possessed by Germany should be turned over without reserve to Australia, which, it was argued, needed them as a matter of national safety. On the other hand, it was held that if the League of Nations were created, and applied the principle of mandates, Australia like other Powers would without doubt receive the consideration it deserved. In short, the answer to this and other questions was the scheme for a League of Nations. At the end of January it was announced that a satisfactory arrangement of a provisional nature had been reached in regard to the German colonies and the occupied territory in Asiatic Turkey. This involved the placing of these territories and islands in the hands of designated Allied coun-

FIRST LEAGUE OF NATIONS CONFERENCE IN LONDON

From left to right: M. Kaklamanos of Greece, M. Matsui of Japan, Mr. Bal four of England, M. Bourgeois of France, Sir Eric Drummond (Secretary to the League of Nations), M. Ferraris of Italy, M. Paul Hymans of Belgium and M. Quinones de Leon of Spain

tries acting as mandatories of the League of Nations. Thus the Southern Pacific islands would go to Australia, and German Southwest Africa would go to the Union of South Africa. The mandatory plan as it was considered at the beginning of the Conference did not apply any definite formula of trusteeship to the territories peopled by inhabitants of different degrees of civilization. It implied that the mandatories were to have a wider freedom of action in uncivilized countries, such as New Guinea, the African colonies, and the islands of the Pacific from what they would have in Asia Minor where the populations are more civilized. The trustees would be obliged to agree to protect the native populations against various evils, such as the sale of liquor, and to protect civilization against such dangers as the creating of large armies of the natives. It seemed probable that Great Britain would claim the mandate for Mesopotamia and perhaps for Palestine, and that India would claim the mandate for a portion of German East Africa. Australia had already claimed the Southern Pacific islands and South Africa had claimed German Southwest Africa. It seemed likely that Italy would claim the mandate for Somaliland and that claims would also be put forward by Belgium and Portugal. It was argued that the same principle of compromise observed in regard to the German colonies must be carried out in regard to the East also, and that national aspirations and national traditions must be restrained if any system promising security was to be created. It was not held that military liability was involved in the assumption of a mandate. Democracies on the other side of the Atlantic, for example, could not be expected to send troops into Russia. The failure of the Prinkipo plan (see RUSSIA) did not change matters in this particular. See clauses respecting German colonies, etc., in the Treaty with Germany summarized below.

There was continued distrust of Germany, even under its new republican government. It was believed that the same spirit of ambition and the same determination to build up competitive industry and exploit in German interest every weakness in other nations, as, for example, in Russia, still existed under the new régime. Hence prevailing opinion seemed to favor continuance of the blockade. Against this it was argued that if Germany were to be made to pay she must be permitted to reconstruct her industrial system, and that this reconstruction would really afford security to the world by removing the danger from Bolshevism; that the Allies could not work out their financial and trade problems so long as Germany's power to pay for damages was in doubt. The continuance of the blockade was not only one of the chief grievances urged by the Germans against the Conference but it was one of the main points of the liberal and radical criticism directed against the Conference from the countries of the Allies.

On February 12th the Supreme War Council agreed upon conditions for the renewal of the armistice. The terms, following generally the lines suggested by Mr. Lloyd George, imposed on Germany the limits within which her armament must be kept until general disarmament was decided upon by the League of Nations. At the same time immediate demands were formulated to compel the execution by the Germans of the existing armistice. A meeting between the

Allied and German delegates was held at Treves. There a long message was received from Herr Scheidemann in which he declared that the appeal of the German people for a conciliatory peace had met with no response, and asked the Allies if they wished a complete reduction of the German people just at the moment when they had entered the ranks of democracy. He said that the civilized nations ought to move side by side for the common good of mankind, and that the Allies should renounce their policy of the unscrupulous use of force. The document which ran to some 25 pages continued in this vein. The main points in the conditions were as follows: In regard to the army they aimed at laying down the general lines of the permissible military strength of Germany. As to the navy it was provided that the forts of Heligoland were to be dismantled by the Germans under allied control, that certain ships were to be destroyed and others turned over to the Allies. On February 17th, when the German delegates returned from Treves and announced the terms, the Assembly adjourned as a token of mourning and Count Rantzau resigned as foreign minister rather than sign the new terms (see GERMANY). According to the reports of the press, the cabinet at Weimar at first made up its mind to refuse to sign, but upon discussion with the party leaders and in view of disorders in the interior, they found it necessary to give way.

The most dangerous crisis of the Conference was that in regard to Italy's claims to Fiume. The Italians insisted upon their demands and there seemed no prospect of their yielding. President Wilson publicly declared on April 23d that he was opposed to them. This was construed as an appeal over the heads of the members of the Conference to the Italian people, and was criticized widely from that point of view, although there was no evidence that he had taken a course which had not been thoroughly approved by all of his colleagues except the Italians. The Italian delegates upon their return to Rome were supported by the Chamber, which gave the government a vote of confidence, and they were apparently favored by the Italian population. They returned to Paris on May 6th (see *Italian Question* below).

During the first week of May reports of the several committees were published, and important measures were announced, including the granting to Poland of a right of way or protected strip of territory, known as a "corridor" across East Prussia to the Baltic Sea; and the creation of Danzig as a free city under the League of Nations; the arrangement in regard to the coal basin of the river Saar; the transfer to Japan of the German concessions of Kiaochow; the placing of the former German colonies under the mandatory clause of the Covenant; the submission of the revised constitution of the League of Nations; and the preliminary organization of the League with Sir Eric Drummond as secretary-general.

From the first there were repeated demands on the part of the newspapers representing the ruling classes in the Allied countries that the Conference should form a clear Russian policy which meant a policy that would intervene effectively against the Bolsheviks in Russia. The attitude of this element in the press is well illustrated by the spirit of the London *Times* which accused the Council of Four of indecision

and said that unless a strong anti-Bolshevist policy was adopted the Allies would lose the fruits of their victory. It complained that there was a movement for compromise with the Bolsheviks in return for economic concessions and that this was due largely to the selfishness of financiers who were taking too active a part in the matter. A Paris correspondent of the *Times* called attention to the weakness of the Allied leaders in the face of the Bolshevik danger and contrasted M. Clemenceau's high courage and patriotism with the indecision and selfishness of some of the other Allies. This was the prevailing point of view in the Allied countries; and in a large part of the American press it was advocated with such zeal that any argument for a less aggressive attitude toward Russia was promptly attributed to anarchistic or treasonable motives. At the end of the year there were indications of a complete reversal of policy, and many influential organs of public opinion were beginning to unsay everything that they had been constantly saying. (See RUSSIA, paragraphs on *History*.)

THE SIGNING OF THE TREATY. The German delegates arrived at Versailles on May 7th and entered the Conference room early in the afternoon. They were received by a speech by M. Clemenceau which was remarkably brief, saying merely that the time had come for Germany to make reparation and to learn the terms. He concluded with the remark that the peace had been too dearly bought for the Allies not to ask for the full satisfaction which was their due. The leader of the German delegates, Count Brockdorff-Rantzau, made a reply in which he said that Germany did not underestimate the greatness of her defeat and that he knew the power of hate which they encountered at Versailles. As to the demand that they should confess themselves alone to blame for the war, he said that such a confession on his part would be a lie. He called upon the Conference to remember that while the Allies had had to wait six weeks for the armistice terms, Germany had had to wait six months for the peace conditions. The atrocities of the war had been abominable but they had at least the excuse of passion. Since the armistice a hundred thousand non-combatants had died as a result of the Allied policy of blockade. He called upon the Conference to remember this when they spoke of guilt and reparation. The treaty was not signed till June 28th. During the interval Germany tried to secure modifications, and frequent notes passed between Count von Brockdorff-Rantzau and M. Clemenceau. The German delegation on May 29th pronounced the treaty draft a "victorious violence," and said that its terms were intolerable. Meanwhile it had submitted a long document detailing a series of counter-proposals, including the following: First, as the condition of Germany's acceptance of the reduction of her standing army to 100,000 men, and the disarmament of her battleships, she demanded the retentment of her merchant fleet. Second, while surrendering sovereignty over Alsace, north Schleswig, and Posen, she demanded that a plebiscite be held in those regions. Third, while agreeing to the neutralization of the Vistula, she stipulated that Danzig should become a free port, and she rejected absolutely the cession of Upper Silesia and parts of east and west Prussia without consulting the populations concerned. Fourth, she condemned the annexation

of the Saar basin to France as certain to create another Alsace-Lorraine, and demanded reconsideration of that whole question. Fifth, she requested the evacuation within six months of the occupied territory, and the right to administer her colonies as mandatory if a League of Nations were established with Germany as a member. Sixth, she demanded a neutral court to try offenses against the laws of war, and rejected "penal stipulations." Seventh, she asked that a definite sum should be fixed for reparation and the date of payment postponed, and she suggested payment of 20,000,000,000 marks before May 1, 1926, and the remainder in annual payments without interest, beginning May 1, 1927, the total not to exceed 1,000,000,000 marks a year.

The answer of the Allies to these demands was that it was in accordance with the deliberate judgment of the greater part of the civilized world that the Kaiser should be tried by an Allied tribunal; that the superior control of the Saar basin would be decided by the League of Nations, and that after 15 years the people of that region would settle the question for themselves; the German claim to the colonies was rejected; the demand for a plebiscite for Alsace was also rejected; certain modifications were made on the recommendation of Denmark in regard to the Schleswig plebiscite; Germany's objection to a plebiscite in east Prussia was characterized as inexplicable. On the other hand the Allies made the following concessions among others: That Danzig should be a free city; that a plebiscite should be held in Upper Silesia; that Germany might submit proposals in regard to reparation within four months; that the Allies would reply within two months after receiving it, and that the financial amount would then be fixed; that Germany might be admitted as a member of the League of Nations at an early date if she proved by her acts her good faith in the matter of the treaty; that she might have three months for the reduction of her army to 200,000, and that the rate at which she reduced it to the stipulated limit of 100,000 would be reviewed every three months. On June 16th, the new version of the treaty incorporating all changes was handed to Germany, and she was required under threat of invasion to express her willingness to sign by June 23d. On June 20th it was learned that the German delegates, supported by their government, refused to sign; but the government fell from power immediately, and under a new ministry, headed by Herr Bauer, new envoys were appointed, Dr. Hermann Müller and Dr. Johannes Bell, who signed the treaty, June 28th, at the palace of Versailles in the *Galérie des Glaces*, the room in which the ceremonies inaugurating the German Empire had taken place after the German victory in 1871. For summarized text of treaty, see concluding section of this article.

LATER SESSIONS. The Peace Conference continued throughout the year and was in session at its close, although the United States peace delegation left Paris on December 9th. During the drafting of the Treaty with Germany and the League of Nations, a project for the protection of France against German aggression in the future was agreed upon by the representatives of France, Great Britain, and the United States. It consisted of a treaty of defensive alliance between France and each of the two other Powers, whereby the latter agreed to come to the aid of

PEACE CONFERENCE

Premier Clemenceau Inviting the German Delegation to Sign the Treaty of Peace

France in the event of an attack upon her by Germany. See below under *Guarantees of France*. Supplementary meetings were being held in London in December. They began December 11th, and were attended by Mr. Lloyd George, M. Clemenceau, and the Italian foreign minister, Signor Scialoja. They discussed the Italian question, the Russian situation, America's attitude toward the Treaty, the Turkish problem, the financial situation of France, and other matters pertaining to the reconstruction of Europe. These interviews were the subject of much comment in the French and English press. The general opinion expressed was that an agreement had been reached on all questions between the two Powers and that the result of it was to ensure entire harmony between them. The details of the meeting were not made public but it was understood that they related to economic matters and especially the coal question on the one hand and to the application of the treaty on the other hand. Measures were discussed according to press reports for a strict supervision over Germany. In certain French quarters the conference was looked upon as a definite step toward consolidating the interests of the two countries which were mainly instrumental in winning the war and it was prophesied that if the French-English understanding continued all difficulties would be easily removed.

More detailed consideration of the above and other matters that came before the Conference, summaries of controverted questions, criticisms of the Treaty, and an account of the attitude of the respective countries are given in succeeding paragraphs.

WORLD LABOR CONFERENCE. A convention comprising 41 articles was drawn up at Paris at the close of March providing for a permanent body which should aid in regulating international labor conditions. See *INDUSTRIAL RECONSTRUCTION*.

THE UNITED STATES AND THE TREATY. It was known before the signature of the treaty by the President that the Republican majority in the Senate was either hostile or severely critical. Repeated attacks had been made upon it both on the platform and in the press, and the President's speeches and his interview with Senators at the White House during his brief visit in February-March seemed rather to strengthen the opposition. The Treaty was presented by him to the Senate for ratification, July 10th. The opposition in the Senate Foreign Relations Committee under the leadership of Senators Lodge and Knox took definite form. Reservations were proposed and exhaustively discussed, which according to President Wilson and his supporters, practically nullified the work of the Conference. The situation became more confused as discussion advanced, for not only did it become involved in domestic political partisanship and in considerations pertaining exclusively to the personal conduct of the President, but there was little coherence in the arguments brought forward by either side. Mutually hostile groups united in the support of the Treaty for reasons diametrically opposed, and it was condemned by equally divergent arguments. In August it was learned that the President had determined to make a series of public speeches on its behalf throughout the country. He left Washington on this speaking tour, September 3d, made addresses on the following day at Columbus and Indian-

apolis, and on successive days addressed gatherings at many cities on his way to the Pacific Coast. After delivering several addresses at San Francisco and other points in the West he was obliged on account of a nervous collapse to give up his speaking tour on reaching Wichita, Kas. (September 28th) and returned immediately to Washington. There followed a long and serious illness which incapacitated him for duty throughout the rest of the year. Meanwhile on September 4th, the Senate Committee on Foreign Relations reported its resolution to ratify the Treaty with reservations embracing the following principal points: Unconditional right of withdrawal; no interference on the part of the United States in foreign territorial disputes; and exclusion of questions of domestic affairs, immigration, tariff, etc., and especially of the Monroe Doctrine, from the jurisdiction of the League. An account of the successive stages of the Senate's action will be found in the article *UNITED STATES under Congress*, and of the final rejection of the Treaty on November 19th. It was suggested that the President would re-submit the Treaty in December, but it was learned that he was unwilling to do so. Compromise was discussed in December, for neither of the two great political parties apparently wished to make ratification an issue of the approaching election.

By the middle of December it was evident that friends and foes of the treaty in the United States had come to an *impasse*. The situation was well summed up by a foreign observer and while his remarks indicated a lack of understanding of some of the points at issue they represented the point of view in important quarters abroad. He said in the first place that the treaty including the League of Nations had been adopted under the inspiration of the President of the United States. Therefore it seemed peculiarly irritating that the United States should be the one Power in which the most serious opposition to it had arisen. The United States Senate had rejected the treaty in its original form and it had also rejected it in its amended form, and at the close of the year parties had reached a deadlock upon the question. The treaty was the work of a Democrat but had to be judged by the Republican Senate. On the one hand the President was accused of preventing the settlement by his obstinacy; on the other the Senate was subjected to the same accusation. American opinion seemed to correspond exactly to the political party to which the person who expressed it belonged. In Democratic papers the Democratic view was not open to criticism. This was evident at the beginning of December, but as the debate went on newspapers of both parties tended to agree upon several points, namely: The necessity of bringing the war to a close; the urgency of ratification of the treaty; the value of the League of Nations; and the advantage of returning to the international economic situation before the war. On all sides the importance of escaping from the present deadlock was recognized but when it came to the means of doing so, opinion was divided. On the one hand the Republican journals exclaimed, "See what a misfortune the obstinacy of the President has brought on us," and on the other hand in almost identical language the Democratic papers exclaimed, "See what a catastrophe the Republicans have brought upon us." According to the press situation as it appeared

FOUR GREAT LEADERS OF THE PEACE CONFERENCE

opposite point of view continued without interruption from liberal, radical, and socialistic elements in all the countries, and from all who desired to see the programme set forth by President Wilson consistently executed.

FRANCE AND THE TREATY. Although the French representatives at the Conference were always on the side of extreme measures against Germany, aiming not only to prevent military recovery but to cripple Germany permanently as an economic power, they were blamed by many public men in France for not going far enough in this direction. So far as could be judged from the French press and persons associated with the official class, the French had not the slightest faith in the League of Nations and in many quarters they frankly made fun of it. They regarded it as no more likely to restrain nations in the future than the Hague Conference had been. Their idea of a league of nations had been an effective body resting on military force, practically a continuation of the alliance against Germany. When the League took the form of a deliberative body, M. Clemenceau compromised by insisting upon the alliance with England and the United States. The attitude of the French was well illustrated in the summer and autumn of 1919 by the sympathy with the Italians in regard to Fiume, by the more or less open encouragement of Rumania in her aggression against Hungary, and by the reaching out for diplomatic means of assuring French military preponderance in Europe. The larger part of the discussion over the treaty in France related exclusively to the reduction of the Germanic Powers of Europe to a condition of impotence. This was all due to well-grounded fears based on hundreds of years' experience. Mingled with it, however, was an imperialistic element. Liberal writers, such as Mr. Brailsford, and others in England and the United States, and the Socialists in France, accused the French ruling class of aiming at military domination. It was said that not feeling safe against any attack from Germany, as a result of the alliance with England and the United States they were ready to go to any length. The plans of the government were compared to those of Napoleon. It was pointed out that French policy had succeeded in insuring France against the power of Germany three times over: First, by the disarmament of Germany while France did not disarm; second, by the occupation of the west provinces of Germany; third, by a system of alliances which guaranteed French leadership in Europe. This it was said so strengthened the position of France that she felt safe even under the political arrangements which subjected millions of Germans to alien rule. Her policy was characterized as the creation around a disarmed Germany of a ring of allied satellite states, each holding down the largest possible number of Germans compatible with safety.

On the other hand, as before mentioned, the criticism of French journalists and politicians generally took the opposite ground, condemning the government for not having wrung more out of Germany, and for not having sufficiently safeguarded the interests of France. A few illustrations of this criticism are as follows: Far from being satisfied with the one-sided plan of disarmament, French critics were in constant fear that disarmament measures against Germany were ineffective. For example, M. Joseph

Reinach, citing German authorities, declared that the disarmament measures imposed upon Germany by the Allies had been evaded by the Germans. Article 160 of the treaty declared that the German army should not in any case exceed 100,000 officers and men, and articles 173 and 174 had abolished all obligatory military service, declaring that the army should be recruited only by volunteers and that the term of service should be 12 continuous years. These provisions had been condemned by Marshal Foch as inadequate. As a matter of fact, according to M. Reinach, they were not observed and the effectives were from four to five times as numerous. The forces at the disposal of the Germans were according to him as follows: The Reichswehr for the protection of the empire created by the law of March 6, 1919; the Einwohnerwehr, or national guard, and the Landeschütz, or rural defense troops. The last two were ostensibly under the minister of the interior and not the minister of war, and had been created especially for the defense of the cities and country districts against the Spartacides. Nevertheless they were organized under the ministry of war and might when required serve as the reserves of the Reichswehr. An army order issued on July 1st was quoted as approving the demand of the minister of war that the Einwohnerwehr should be treated exactly in the same manner as the Reichswehr. In case of necessity it was to be incorporated in the Reichswehr. An official circular was quoted to the effect that the civil guard would be closely united with the associations of former combatants or with shooting clubs, and that the personnel should be chosen from among the ex-soldiers and non-commissioned officers. Exercises were to take place each Sunday for the purpose of awakening among the old soldiers returned from the war and among young people the love of the military life and of the country. Other evidence was cited, all to show that under cover of providing police protection Germany had in reality created a large military force which would serve in the event of war. These accusations were based in part on charges made by the Socialist press against the German government. The same point was brought up in the French Chamber under another aspect. It was charged by a deputy, M. André Lefèvre, that the reorganization of the German army was steadily going on. He said that the Reichswehr had 100,000 men serving for 12 years, but that the defense minister, Noske, had just declared that these men could not adjust themselves to the life of the barracks. From this it was inferred that they were destined to serve as skeleton formations for the new forces. He asked whether these men were simply officers or chiefs of section which could not support the life of the barracks. He wanted to know if they were not destined to serve as the nucleus along with the men of the police force for a territorial militia. While the ratification of the treaty was delayed, Germany according to him was building up a strong military force on the assumption that her interpretation of the treaty was correct. And he wanted to know how the Allies could guarantee German obedience to their demands in regard to disarmament. Suppose temporary committees visit Germany and find out that apparently the permissible number of men has not been exceeded. What is to prevent Germany's changing her military system as soon as they are gone? Guar-

antees were bound to be insufficient. Statistics would be falsified in advance. In the latter part of 1918 it had been reported that by order of President Ebert the war munitions would cease on December 31st, that is to say, 50 days after the armistice. During that interval she could easily have manufactured 15,000,000 of shells or at the rate of 300,000 a day, etc. There was much more to this effect. Fear of inadequate protection against the military renaissance of Germany was the motive of a vast body of French comment throughout the year.

It was reported in France toward the end of the year that there was a sharp reaction against American influence in European affairs and in some quarters a bitter feeling against President Wilson and Americans generally. Every Frenchman, it was said, believed that war would certainly recur and that France would inevitably have to fight for her life again. Hence their eagerness in the matter of alliances and all other measures to insure the future safety of the country.

A large body of French opinion in regard to the treaty and the League of Nations was fairly well represented in the report of M. Léon Bourgeois, who had been the spokesman of the element in France that favored a League of Nations, and who had for many months past been engaged in formulating plans. The report which was a document of some 200 pages was distributed among the French senators on October 7th. Space is lacking for a summary of it here, but the following points in its general conclusion may be mentioned: In the first place, the Treaty and the League were not to be regarded as ends, but as beginnings. There were many obscure clauses in both instruments and many points that needed development. To remove doubt and carry out the spirit of these undertakings there must be frequent conference among the Allies. The provisions of the instrument must be developed according to actual needs. French treaties of alliance must be completed by conventions directing their execution. Many had hoped that the League of Nations as guardian of justice and law would have a sufficient armed force at its back to secure the safety of each of its members. Pending the creation of such an international force France must remain under the régime of military alliances, and they must be made complete and effective. She must come to an understanding with Belgium on the one hand, and with Italy on the other for the organization of the defense of her western front. Although the two great Powers overseas had formed alliances with France, she must develop a continental policy. Her military frontier in reality extended from the mouth of the Escaut to the coast of the Adriatic. The sentimental union between France and Belgium should become a union in fact, and in the same way the ties with Italy should take on a definite form. Then financial agreements should be made between the Allies, for they alone would permit France to acquire the means of meeting the costs of reconstruction. The minister of finance had already proposed to the Peace Conference the creation of a financial section of the League of Nations but this was not realized and there was no knowing when it would be. Meanwhile France must act in common with her Allies with whom there had been an entire mutuality of financial interest during the war. This mutual

financial interest must continue after the peace, for it was to the interest of all concerned; the rapid recovery of France was essential to the prosperity of the world. Serious difficulties awaited the government. It must not be forgotten that the heavy burden of many wars in the past into which the nations had been dragged by violence, cupidity, and ambition, rested upon all of them, and that there were obscure motives still driving them back towards the old course of injustice. An almost superhuman effort of conscience and will was required to bring about a new attitude in humanity. The governments alone could not do this, because their daily responsibilities were too heavy, and they were in constant fear of compromising the great interests of which they had immediate charge, fearing to embark on any idealistic course lest other chiefs of state might take advantage of it. Traditional prejudices still haunt the spirits of men and habits still enslave them, and these things check remedial action. Appeal therefore must be made to the people of France itself and to the peoples of other countries, for at the bottom there was abroad in the world among the peoples a true sense of justice and solidarity. In the democracies of the West a campaign of education should be carried on in which the best intellects should take part toward directing currents of popular opinion along this line, and thus giving the governments the necessary support in a movement toward a new world order. It was not necessary that people should abandon their opinions or that political parties should disappear, but it was necessary that upon this essential point there should be accord, and that all should tolerate one another's difference in other matters. France must live and show herself stronger than ever as the result of the war. For this, rigorous economy was necessary, and work in all its forms must be resumed with energy to carry on the national production. The revolution of 1789 had established political equality among men. At the present epoch the aim was to establish social equality. There should not be a dictatorship of any one class. Justice could not proceed from a class conflict, but only from the disappearance of the causes of conflict among classes. The war had not been fought merely to substitute civil for foreign wars, and the class conflict was a civil war in all the countries in which it appeared, and involved a return of the very violence that the world had tried to suppress. French diplomacy better guided than formerly should move toward a more equitable and consistent organization of international society. France could pursue her high mission supported on the one hand by her great Allies, and on the other hand by the weaker peoples who look to her as a protector. All those young states to whose independence and new life she had contributed were her natural Allies, namely, the Poles, the Czecho-Slavs, the Jugo-Slavs, the Rumanians, and the Greeks; and they all realized that she had not come to their aid for the purpose of dominating or enslaving them.

FRANCE AND AUSTRIA. There was much comment in the American newspapers on the attitude of France toward the creation of a consolidated German state by the union of Austria and Germany; and this attitude was sharply criticized as contrary to the principle of determination by nationality. The French point of view may be outlined as follows so far as it was indicated in

the French press: France feared the establishment of a new Austro-German empire of 80,000,000 inhabitants on the border of their devastated and depopulated country. They said this meant the reconstruction of the German Empire in the heart of central Europe with the result that Germany would emerge from the war stronger than when she entered it. They pointed to the speeches of German and Austrian politicians such as Ebert, and David at Weimar, and Müller and Adler at Berne, as indicating a Pan-German programme. The policy of the Austrian Socialist, Adler, for example, aimed at a permanent alliance between Germany and Austria which would make a greater Germany by annihilating the Austrian state. Though Adler had died under the revolutionary government in Vienna, he had left disciples who carried on his propaganda. In Austria the economic problem was insoluble they said, except by union with Germany. The German people are still the same, said an Austrian writer. It is a people that within a few decades rose to the second place in the world's commerce with a trade of 20,000,000,000 marks. After the war it would devote itself to recovery and already the French are irritated by seeing the nation that they believed they had stifled rising again with faith in itself. The Austrian bank bills will be absorbed in the monetary system of Germany, and the German mark will again take its place in world commerce, and rise to its former value. The commercial success threatened by such a union was a danger to France and this was not to be set aside by mere considerations of abstract right. The critics pretended that the French ought not to oppose the union of Germans when they admitted the union of Poles. On the other hand the French maintained that the principle of nationalities proclaimed by President Wilson should not constrain them to favor a new coalition of their enemies, and that it was entirely inapplicable to German Austria where the mass of people did not at all desire union with Berlin. As a French publicist declared, the inhabitants of German Austria had lived separately under the Hapsburgs since the end of the Holy Roman Empire and are altogether different in their manners and in their interests from the Germans of Germany. Now although the German republic wishes the union, the wish is not reciprocated in Austria where only a small minority composed chiefly of Pan-German intellectuals desire such a union. Those opposed in Austria to the union, having been neglected by the Allies, did not know to which side to turn. It was the duty of the Allies to enlighten them and revive their national spirit which is Austrian and not German. The Allies should assure them that their independence would be guaranteed. The difference between this situation and that of Poland was manifest. While the Austrians had hitherto shown no desire for a union with other Germans, the Poles during a century and a half and in spite of the oppression they had suffered had maintained a strong national spirit. The agitation in Austria for German unity was moreover wholly artificial, and had its origin in imperialist quarters. In fact the Austrian minister of foreign affairs was simply reverting to the policy of Bismarck and Andrassy. France could not permit the victory to be nullified by an arrangement that would leave her in face of a Germany stronger in 1919 than she was in 1914,

and could not expose herself to the union of a people whose only common purpose would be that of revenge. Moreover, it was not Austria that wished the German alliance, but Germany that wished the Austrian and Germany was manipulating the politicians of Vienna. The right of the peoples to dispose of themselves should be respected when it is clearly manifest, but in this case it was not clear. On the contrary, its appearance was simply the result of German intrigue.

THE GUARANTEES OF FRANCE. The French at first wished to gain possession of certain strategic points which would make invasion from Germany impossible. This was the plan approved by Marshal Foch. He remembered that in 1870 as well as in 1914 the concentration of the German troops took place on the left bank of the Rhine, and that this indeed seemed to be a matter of military necessity. Even so long ago as at the Congress of Vienna the principle had been demonstrated that German concentration against France must always take place between the Rhine and the Moselle, and the German theory on this subject had never varied. The French plan therefore was to annex the left bank of the Rhine and impose on the inhabitants the duty of military service with the French. This point was put forth on Nov. 28, 1918, by Marshal Foch, but it was modified on Jan. 10, 1919, by a proposal to guarantee neutrality and self-government to the region, but to require that the provinces and the bridge-heads of the Rhine should be forever occupied by inter-allied forces. On February 25th, the French government adopted this proposal of Marshal Foch. The objection of France's Allies to it were that it would create a new Alsace-Lorraine with the rôles reversed, for it would take from Germany 7,000,000 inhabitants; and the peace of Europe would be constantly menaced. But it was recognized that France must be guaranteed against attack and these proposals were made in March, 1919: First the occupation of the left bank of the Rhine for 15 years and longer if the final clauses of the treaty were not fulfilled; second, on the left bank of the Rhine around the bridge-heads, and on the right bank for a distance of 50 kilometers, no fortification or encampment or occupation by troops was ever to be permitted to the Germans; third, the German army was to consist of only 100,000 men serving continuously for 12 years. Finally it was proposed that an alliance should be made between France and her two partners, Great Britain and the United States, guaranteeing France against a German attack. On March 14th, as between the military guarantees demanded by Foch on the one hand, and these modified arrangements accompanied by this alliance on the other hand, the choice of the latter was accepted. There was much discussion of this arrangement and in the course of the year the government was frequently blamed for it, but on behalf of it it was argued that it really gave better guarantees to France than the other method. In the first place the Germans were not to retain so strong a military force as the French plan had admitted. This plan had provided that the German army should consist of 200,000 men under obligatory service for a year which would have resulted at the end of 15 years in giving Germany 3,000,000 men who had had training under arms. The accepted arrangement reduced the number

of men to 100,000 and required 12 years continuous service, thus leaving Germany at the end of 15 years only 200,000 men with military training. Again, the moment a German attack began, England and America would immediately take up arms for France. Some Frenchmen argued that this would be too late, but this point of view was not generally taken seriously, for it was pointed out that France had been able to wait for her Allies even after the Germans were within striking distance of Paris; that German preparations on a large scale could hardly escape the observation of the Allies; and that the appearance of a German force anywhere within 50 kilometers of the Rhine would bring England and America to the assistance of France. To be sure Germany had her large veteran army, but after 15 years these troops would no longer be able to serve and meanwhile the French troops would retain the whole valley of the Rhine.

THE RHINE PROVINCES. The occupation of the Saar basin and the left bank of the Rhine by the French was followed by various reports and rumors as to plans on the part of the natives for an independent republic, and as to a campaign of the French for the winning over of the provinces to France. There was much written in the French press in regard to the friendliness of the population toward France. There was also much discussion all tending to show that the provinces really had no place in the German state and that closer relations with France were not only desirable, but were based on historical precedent. On the other hand there was much criticism of this attitude in the liberal press as tending to threaten the peace in the future. The arguments as presented by one of the German leaders for a movement for the independence of the Rhineland were the following: In the first place the question was compared to that of Ireland. The inhabitants to be sure speak German just as the Irish speak English, but that did not prevent a recognition of a Rhenish question just as it had been recognized that there was an Irish question. The Rhineland paid heavy taxes to Prussia and received nothing in return except a bureaucratic government. In the second place there was as much reason for recognizing the existence of an independent spirit in the Rhineland as among the Catalonians in Spain. Spain recognized that question. In the third place, if there were a war, it would certainly be fought out on the soil of the Rhineland, which would then be involved in a cause that was not its own. "Why," the French argued, "should they not be permitted to form a republic?" In the liberal press of the Allies it was suspected that their aspirations were misrepresented, and it was feared that the French were merely paving the way to plans for annexation. Along with the various accounts of the wishes of the inhabitants, and their hatred of German oppression, etc., in the French press it was noted by the liberals that no proof was assigned for these alleged conditions. As a rule the articles merely said that the inhabitants felt this way or that without citing any authority for the statement.

ITALY AND FRANCE. There was much said during the year about various proposed combinations on the Continent of the Latin or Latin and Slavic Powers against the German, and both in Italy and France there were influential groups devoted to plans for a closer union between the two countries. In France the president of the Committee

of Foreign Affairs in the Chamber had published an article calling upon the country to show Italy not by word, but by deed, that France wished to realize in the face of the German *bloc*, which was always a danger, an Allied *bloc* of 80,000,000 Frenchmen and Italians to which should be joined if desired Rumania, Portugal, and perhaps Spain. This plan was condemned by the liberal press as going back to pre-war policies based on the balance of power idea, and as taking no account of the new liberal spirit in international politics. On the other hand, it was condemned by certain French groups on the Continent as really unwise even from the point of view of that same balance of power principle. For example, M. André Chéradame, who had both during and since the war been constantly concerned with the means of blocking Pan-Germanism, attacked the plan and criticized the whole Italian policy as in reality opposed to a union among the Allied Powers. Italy herself had not practiced any such policy of union he said. For several months after the armistice, Italy had been engaged in reestablishing improved relations with the Germans, the Magyars, and the Bulgarians. Her policy had been anything but Latin and there was no reason why France should confine herself to Latin alliances. The policy of Italy had been, according to him, entirely opportunist and it was absurd to think that she was concerned with the defense of France against Germany, her former ally. Down to the end of 1917 she had been hostile to the Yugoslavs, but in April, 1918, had thought it judicious to declare herself in their favor. When the revolt of the Yugoslavs in September, 1918, won central Europe for the Allies, Italy returned to her hostile attitude toward them, indicating a purpose on her part to prevent them from fully organizing. Moreover, the countries which might form a Latin alliance, Italy, France, Rumania, Spain, and Portugal, were too much scattered for that purpose. The combination which would favor France, according to M. Chéradame, was as follows: Poland, Rumania, Greece, Czechoslovakia, Belgium, and Yugoslavia, with a total population of about 84,000,000 which with the 36,000,000 of French would form a group of 120,000,000 on the Continent alone. Such a combination would, he said, have incidentally the advantage of providing the only means of reconstituting Russia on a basis independent of Berlin. He pointed out that this alliance with the Slavs would provide an excellent means of hemming in Germany and that all these peoples had been for a long time sympathetic with France, sending their inhabitants to study in the French universities, etc. Italy might join such a group if she wished and of course it was desirable that she should do so. Italy's purpose seemed to be to balk any such combination on the part of France, and to make the situation of the Yugoslavs and the Czechoslovaks impossible. His critical views of Italian policy were shared in liberal quarters in England and the United States. But the combination which he recommended and which was said to be foreshadowed in certain French military and diplomatic policies, was condemned in the liberal press for the same reason that the Latin combination was condemned, namely, as a reversion to old imperialistic principles.

THE SHANTUNG QUESTION. It was evident early in the Conference that the Chinese repre-

sentatives were inalterably opposed to the Shantung settlement. This position was founded upon public sentiment in China, which was supported in many other parts of the world, where the arrangement was condemned as wholly unfair. In March the Chinese delegation sent a memorial to the Conference demanding that Kiaochow be restored, and Shantung evacuated by the Japanese. As soon as it was known that the Conference had decided to leave Shantung in the hands of Japan, the Chinese delegates registered their formal protest. They subsequently made a number of efforts to have this point reserved from the treaty, but this was refused. On June 27th they announced definitely that China would not sign. As a result anti-Japanese agitation spread over the republic and there was an extensive boycotting of Japanese goods.

The senior member of the Japanese delegation, Baron Makino, former minister of foreign affairs, presented Japan's arguments in respect to Shantung and the other Japanese claims in February. The main points were as follows: After Japan took possession of the acquired territory there was a development of ill-feeling on the part of China which was due to German influence. In 1915 Japan sought to bring about an arrangement and as a result an agreement was formed with China whereby Japan agreed to restore to her Kiaochow. China entered into this engagement and in 1918 also formed an agreement with Japan with regard to the international settlement of Tsing-tao and certain other concessions by China to Japan in respect to the development of Shantung. Japan had no territorial ambitions in China. In seeking concession in the province of Shantung Japan was seeking no more than a fair division in cooperation with China. It was not taking advantage of China to ask that Japan be permitted to have equal opportunity for development on the same basis as other nations. China had the necessary raw material and Japan the necessary capital. It was not true that Japan wanted to take advantage of her neighbor. She was only seeking an equal opportunity and open door and a peaceful cooperation between the two nations. As to Siberia Japan had agreed with the Allies that along with them she would evacuate the country when order was restored and a suitable government established. The greater part of the troops had already been withdrawn. In respect to the Caroline and Marshal Islands, Japan had entered a claim for the right to keep them for the purpose of peaceful development and on this point Japan held that she was better fitted to educate and develop the native population than was any other nation. In conclusion as to what Japan had done in the war, in the first place her fleets in the Pacific and Indian Ocean and in the Mediterranean had traveled more than 1,200,000 miles for the protection of transports and merchant vessels and the escort of vast numbers of men transported to the aid of the Allies. She had seen to it that the Pacific Ocean was free from the danger that had threatened the other seas. She had been able to provide considerable quantities of war supplies and materials to Russia, England, and France, and she had made loans to Russia. He concluded, however, with the remark, "These are small matters in comparison with the magnificent sacrifices of our Western Allies."

The arguments against the granting of Shantung to Japan so completely absorbed attention

in the United States that it may be of interest to present additional considerations on the Japanese side. In the first place there was the claim of Japan to compensation for her share in the war, and it was argued that general considerations of right should not obscure this. As M. Denys Cochin said, one must not profess the principles of right in abstract terms; it is just to compensate service when services have been rendered to the cause of the right. The attitude of Japan had been in marked contrast to that of China. On August 6th, the president of the Chinese Republic declared that his government intended to remain neutral. On August 15th, China sent her ultimatum to Germany, and on September 15th, Germany was called upon to evacuate the province of Shantung. Japan took possession of it in order to surrender it eventually to China. Germany did not reply to the ultimatum and in November, 1914, Japanese troops entered Kiaochow. The Chinese protested against this occupation by the Japanese troops, and appealed to Japan on the ground of neutrality. Japan then presented her 21 demands and finally sent the ultimatum of May 7, 1915, which China agreed to on May 25th. The latter approved in advance all that Japan had done in Shantung and elsewhere. Germany had long desired a foothold in China like that of the British at Hong-Kong, and the murder of two German missionaries furnished her a pretext of occupying Kiaochow. By the convention of March, 1898, she acquired the lease for 99 years of the bay and the islands, and of the port of Tsin-tao, the occupation of a zone of 30 kilometers around the bay; the concession of the railway from Tsin-tao to Tsi-nan, which was completed in 1904, and of several other lines; the exploitation of the mineral deposits; and the preference of Germans in supplying capital, material, and personnel in the entire province. All these powers had been gained by Germany 20 years before, and Japan in conquering the region had won it from Germany and not from China. Japan moreover had deserved well from the Allies from the very first moment. She had declared war at the first opportunity and she had driven the enemy from Chinese waters. If the rights ceded by China to the Germans had been immediately restored to her, China would not have been able to make any use of them, for the disorders in the empire which was torn by rival factions were almost as bad as those in Russia. It was described by a French observer as follows: "A rotten administration, unparalleled corruption, profound ignorance, unpractical idealism, and patriotism noisier than it was sincere." The Allies had admitted that a mandate might be given to one or the other great Powers over China in her anarchic condition. Sometimes, however, the great Powers had not waited for a mandate, but when their interests were at stake, took action of their own accord, as England had done in Persia. The question was whether Japan had important interests to defend in China. As to this, there were 160,000 Japanese out of the 244,000 foreigners settled in China; 4483 out of the 6930 commercial houses; 25,283,373 tons of shipping entered and cleared out of the 80,247,746, Japan being in this last respect second only to Great Britain which had 29,911,369 tons. Japan's population which was 33,000,000 50 years ago was now 58,000,000, and her total area was only 380,511 square kilo-

meters, thus giving a density of 156 inhabitants for every 100 hectares. Moreover, Japan had done nothing without referring to the Allies. Viscount Ishii, Minister of Foreign Affairs, had obtained in February and March, 1917, the agreement of Great Britain, France, Russia, and Italy, who did not make any difficulty about approving the arrangement with China. On May 25, 1915, Japan had promised to surrender Kiao-chow to China after the war on the following conditions: The whole bay to be open to international trade; a municipal Japanese concession to be granted; also a municipal international concession if the great Powers demanded; before restitution the Chinese and Japanese government to determine by common agreement the disposal of the German vessels and property.

The above account is based on arguments of M. Denys Cochin, a member of the French Academy, who advanced them against the views of M. Louis Barthou, who had taken the other side in the matter. He declared that in his opinion the Peace Conference had done well in maintaining article 158 of the treaty and he said that the exchange of views between Mr. Lansing and the Japanese Minister implied that there was no disagreement between the result and the principles of President Wilson. As to the fact that China also had eventually declared war against Germany and was therefore entitled to consideration, he said that China did not join the Allies until after three years of war, that is to say, not till August 5, 1917, and even then had not given much active support. Moreover, she found in Shantung a situation far better than that which she had created herself by her concession to Germany. Again the Allies had released her from the debt contracted to Germany after the Boxer insurrection, which had been placed in August, 1917, at 390,300,000 marks. On the whole, he did not think China had any just grievance against Japan.

The leading objections to the Japanese contentions were as follows: The incorporation of the Shantung settlement in the Treaty was one of main reasons adduced for the rejection of the Treaty by the United States Senate. The attitude of the Senate toward the provisions of the Treaty in respect to China made a deep impression on the Chinese public. The Shantung provincial assembly passed a resolution of thanks to the American Senate and followed it with an appeal to the British Parliament inviting it to take a similar action. The arguments against the Japanese position, so far as they were based on considerations of international justice, may be summed up as follows: It was admitted that European aggressions in China gave great force to the Japanese claims, and it was not denied that other Powers had followed an imperialistic policy, and with less excuse than she. But the encroachments of the Western Powers had no such danger to Chinese independence as was involved in giving a foothold in China to a neighboring nation separated by narrow waters which her fleet controlled, and already dominating China from Manchuria. On behalf of Japan it was said that at the most she only inherited rights already possessed by Germany before the war, and that China was in no worse position on that account; thus the foreign Powers who had acquiesced in the German control were inconsistent in objecting to the Japanese. To this, it was answered in the first place that one object

of the war was to put an end to the old imperialism which had expressed itself in just such acts as the German seizure of Kiao-chow. In the second place, it was argued, that Germany governing from a distance was no such menace as Japan would be and that as a matter of fact she had not followed the anti-Chinese policy that Japan had pursued from the moment of her occupation. Germany, for example, employed exclusively Chinese on the railway. She did not plant a military force at Tsinan-fu, the terminus of the railway, 200 miles from Tsin-tao. She did not discriminate against other nations at the port or drive the Chinese out of business, or carry German economic rights beyond the terms of the treaty. Japan, it was said, on the other hand, on taking over the railway had dismissed all the Chinese employees and imported Japanese to replace them. She had stationed troops at Tsinan-fu and at almost every point on the entire line; set up barracks and wireless stations at important towns; and so dominated the railway situation in a military sense that at a moment's notice she could cut off communications between Peking and south China. As she already held the Southern Manchurian railway in the north she controlled the entire coast and could advance upon the capital whenever she chose. It was said by a Japanese liberal who protested against his government's course in China in presenting the 21 demands that already Japan had such a military grasp upon the country that she could master it within a week. In 1919 Japan installed Japanese advisers at police headquarters in Tsinan, the capital of Shantung. A Japanese consul in making a demand upon the governor surrounded the latter's house with soldiers. Japanese arrested Chinese inhabitants without the slightest vestige of legal authority to do so. A Japanese military commander was moved to warn his fellow-nationals against their present course, saying that they regarded themselves as the "proud citizens of a conquering country," that "when the Japanese go into partnership with the Chinese they manage in the greater number of cases to have the profits accrue to themselves," that "Japanese residing in China incur the hatred of the Chinese," etc. The testimony of many foreign observers was cited all to the effect that in countless small ways the Japanese were showing a determination to treat the country as their own and to keep their grasp upon it, and that the distinction between economic rights and political authority was in the circumstances absurd, for Japanese economic development in Shantung meant nothing less than complete political domination. On this latter point it was argued that all foreign aggression in China had proceeded under color of commercial and financial development. Invasions of Chinese sovereignty had always been undertaken under an economic pretext. There would be nothing left of sovereignty but the name, if Japan were left to pursue her policy of economic invasion. Out of 40 mines in the interior of Shantung which the Germans had left in the possession of the Chinese, the Japanese had, down to the close of 1919, worked their way into all but four. They had done this by various methods, especially by discrimination in the matter of railway facilities. They had acquired lands by threats, blackmail, or coercion. Incidents not important in themselves were building up a Japanese economic ascendancy

which in the long run would mean complete political control.

Throughout the year China's one great weapon had been the boycott. Against this Japan had repeatedly protested. In December, Japan made certain definite demands in regard to it, saying the situation had become intolerable. These demands were among others that China should put a stop to acts on the part of the people favoring the boycott, such as the circulation of hand-bills, the holding of meetings, and the destruction of Japanese goods even though those goods had become Chinese property.

JAPAN AND RUSSIA. On Christmas day Prime Minister Hara declared in an interview that while Japan hoped to harmonize her military actions in Siberia with those of the United States and with the general anti-Bolshevists policy she could not in any circumstances permit the Bolshevik influence to reach her borders so long as it remained dangerous. Japan he said must protect herself against the dangerous Red influence as she would against a plague. He pointed to the collapse of the Kolchak government as proof that Japan and the Allies had been deceived as to the weakness of the Bolsheviks. Whatever might be the future policies of the Allies in Russia Japan's was clear: "A Moscow government determined to spread its doctrines over the world and to bring revolutions everywhere must not touch our borders." These statements were significant for it was the first time that it had been officially indicated that Japan would fight the Bolsheviks in Siberia rather than permit them to advance to the border. It was interpreted as meaning that before the Red army could win Eastern Siberia it must defeat two or three divisions of Japanese troops of the region and in Mongolia and perhaps face Japan's entire military power. It was believed that Japan would oppose any considerable advance beyond the Lake Baikal regions. The Prime Minister went on to say that Japan had absolutely no territorial ambitions and would not take a single square foot of land in Siberia; also that as soon as the Red danger disappeared Japan would withdraw all her soldiers. The Prime Minister attributed the hostility of the Russians against the Americans to German propaganda and denied that Japan had had any part in it. The Germans he said worked steadily to cause jealousy among the Allies, and suspicions on the part of the Russian people whom the Allies were aiding. The charge that Japan was secretly engaged upon a new Japanese-Russian-German alliance was characterized as entirely false and this also was attributed to German propaganda. He also declared that the moment the peace was signed Japan would take up the matter of returning to China all her territory. He said that Japan had absolutely pledged herself to give up all territory and to take out all her troops, retaining only her purely commercial interests and concessions which had been made to Germany. In respect to the League of Nations Japan had not yet decided whether to join it if America stayed out. Japan had refused to enter the new Four-Power agreement known as the Consortium, to make loans to China. The Prime Minister declared in regard to this that Japan must insist upon her special interests in Manchuria which owing to their size and nature and to the proximity of Korea were vital to the na-

tional safety. Japan only wanted the protection of her vital interests and she did not propose that these regions should be wholly excluded from the activities of the Consortium. In respect to the relations with the United States he spoke with frankness and cordiality, characterizing the ill-feeling as a result of the yellow press campaign in both countries. He denied absolutely that Japan was aiming to obtain any special territories in Mexico or special concessions of any kind. He characterized the warnings in regard to a conflict between Japan and the United States as merely loose talk.

JAPAN AND RACE EQUALITY. During the year Japan made frequent arguments against the alleged tendency abroad to discriminate against her. This was applied especially to the United States where she believed the principle of racial equality was not observed in the policy adopted toward her. The main argument was that this tendency was opposed to the spirit of the League of Nations which condemned discrimination among races. At the end of the year she raised the question again at the Peace Conference. The occasion of this was the consideration of the disposal of the German colonies by mandatories. Japan withheld agreement to the mandatory arrangement on the ground that unless some exceptions were made to it Japan would lose colonization and trade rights in certain islands that were to be turned over to the British colonies as mandatories. These rights had been ceded to Japan by Germany during the war. The mandates in question included the partition of German East Africa into two divisions, one to be under Great Britain as a mandatory power and the other under Belgium. It also assigned Southwest Africa and the island of Nauru to Great Britain, the German part of Samoa to New Zealand, and the German part of New Guinea and the Bismarck Archipelago to Australia. The Marshall islands, the Carolines, and the Marianne islands were assigned to Japan. Japan pointed out that certain Australian laws under the new arrangement would apply to New Guinea and the Bismarck Archipelago. The Japanese representative asked for a delay that would admit of consultation with his government. This request was granted.

THE ITALIAN QUESTION: FIUME. In the spring of 1919 the Fiume affair reached a critical stage. The difficulty may be briefly summarized as follows: It dates back to the secret London treaty concluded between the Entente Powers in the spring of 1915, which was understood to be the price of Italy's entering the war. This pact gave to Italy the Alpine boundary in Tirol assigning to her the portion south of the Brenner Pass; it also gave her out of the former Austrian territory near the Adriatic, Trieste, Goritzia, Istria, and a part of the Dalmatian coast, but Fiume the seaport of Hungary was assigned to Croatia. Upon the defeat of the Central Powers the Italian Nationalists immediately demanded that Fiume with its preponderating Italian population should be given to Italy. This was contrary to the treaty of London, but was supported by Italians on the principle of national self-determination. This principle was also asserted by the population of Fiume which set up its own National Council and declared for union with Italy. The Croats, who after the dissolution of the Hapsburg mon-

archy formed a part of the new Jugo-Slav state, opposed this, declaring that while the inner city of Fiume had an Italian majority the city as a whole, including the important suburb of Susak, had a majority of Jugo-Slavs; that moreover Fiume was the only natural outlet to the sea for Croatia and adjacent regions to the northeast and east, while Italy already had other valuable ports; and that railroads connected Fiume with the Croatian hinterland, while railway connections with Italian territory were lacking. Italian public sentiment seemed to be enthusiastically behind the demand for Fiume and at the Peace Conference the Italian delegation headed by Premier Orlando and Foreign Minister Sonnino refused to give way on the Fiume claim despite the opposition of the British, French, and American delegations. At this juncture in April President Wilson took the dramatic step of threatening to withdraw from the Conference and thereupon made public the statement of which the following contains the principal points:

"The war has ended . . . by proposing to Germany an armistice, and peace should be founded on certain clearly defined principles which set up a new order of right and justice. Upon those principles the peace with Germany not only has been conceived, but formulated. Upon those principles it will be executed. We cannot ask the great body of Powers to propose and effect peace with Austria and establish a new basis of independence and right in the states which originally constituted the Austro-Hungarian empire, and in the states of the Balkan group on principles of another kind. We must apply the same principles to the settlement of Europe in those quarters that we have applied in the peace with Germany. If those principles are to be adhered to, Fiume must serve as the outlet of the commerce not of Italy, but of the land to the north and northeast of that port—Hungary, Bohemia, Rumania and the states of the new Jugo-Slav group. To assign Fiume to Italy would be to create the feeling that we have deliberately put the port, upon which all those countries chiefly depend for their access to the Mediterranean in the hands of a Power of which it did not form an integral part, and whose sovereignty, if set up there, must inevitably seem foreign, not domestic, or identified with the commercial and industrial life of the regions which the port must serve. It is for that reason, no doubt, that Fiume was not included in the pact of London, but there definitely assigned to the Croats."

This immediately occasioned in Italy a violent outbreak of hostility toward President Wilson despite the extraordinary popularity that he had hitherto possessed. Orlando and Sonnino left the Conference and on their return to Italy were received with great popular enthusiasm. In the Italian Chamber a vote of confidence in the government was carried by an overwhelming majority. There was great concern among the Allies over this action of the Italians as threatening to break up the Conference, but the Italian delegation finally returned at the invitation of the other members of the Conference. Negotiations on the subject continued and there were various reports of compromise, but nothing definite resulted. On June 19th, the Orlando government fell from power owing to dissatisfaction over the Fiume question and was succeeded by the government of Signor Nitti, a moderate who believed in working in coöperation with the Allies. To the Nationalists and to a large portion of the population this attitude was from the first unsatisfactory.

On September 12th began the spectacular intervention of the Italian poet and novelist Gabriele d'Annunzio, who had become a popular

idol by his valor and distinguished services during the war. At the head of a body of about 14,000 volunteers he executed a *coup d'état*, entering the city of Fiume in defiance of the protests of the Italian commandant, General Pittaluga. The Allied forces, including a British mission, withdrew on September 15th. Attempts of the Rome government to regain authority were unsuccessful and as time passed it was virtually powerless in the face of the growing strength of the sympathy in the army and in the nation with d'Annunzio's purpose. The latter on November 14th evaded the blockade and appeared at Zara, where he persuaded the commandant Admiral Millo to permit a committee of citizens to proceed on his ship to Fiume.

The Italian government in November offered a compromise which it hoped the United States could accept. In some quarters favorable to the administration in the United States acceptance was urged, not because the settlement was in all respects satisfactory, but in order to bring to a close a dangerous situation in what seemed to be the only manner that would satisfy the Italians. On the other hand the Italian proposal was attacked as unfair to the Jugo-Slavs and inconsistent with the principles of President Wilson. The matter was extremely urgent because before the close of November the Jugo-Slavs, who had shown great patience throughout, were finally reaching a point of exasperation which threatened war. The situation at the close of November may be briefly summarized as follows: In the summer of 1919 it had been proposed as a compromise that there should be an independent state with Fiume as a centre. This, however, would have interposed a southern Slav zone between this state and Italian Istria, which was offensive to Italy, because an Italian region would thus be encircled by Slavic territory, and run the risk in the future of being assimilated. Moreover, Italy insisted that there must be territorial continuity between the Italian kingdom and the municipality of Fiume. Italy demanded the extension of her Istrian frontier a little further to the east so that it should include a triangle of about 80 square kilometers, bounded by the seashore and the mountain on the one side, and by a line drawn to the east in such a way that Volosca would be surrounded. By this arrangement Italian territory would extend by a narrow strip to the city of Fiume at the end of the Gulf of Quarnero. In return the Italian government was willing to renounce nearly all the advantages that the treaty of London had promised her in Dalmatia, keeping only the three islands of Lissa, Lagosta, and Sussin, and permitting Zara to become a free city. But this triangle of 80 square kilometers according to American principles should belong to the independent state of Fiume and not to Italy. Such an arrangement seemed to indicate an ultimate design on Italy's part to annex territory that was plainly Slav, that is to say, the Volosca region. It was argued that the only solution of the question was to leave it to the decision of the population concerned. But that was precisely what the extreme partisans of an Italian Fiume would not accept. Accordingly, as the American government opposed the principle of territorial continuity, and the Italian government refused to employ force against D'Annunzio, the situation resolved itself into this dispute over a district

AFRICA ACCORDING TO THE PEACE TREATIES OF 1919

of 80 square kilometers of land. On an adjustment in regard to this small tract seemed to hang the question of peace or war, involving 80 millions of people, that is to say, 40,000,000 of Italians on the one hand, and on the other all the Jugo-Slavs and other peoples in that region who depended on the commerce that passed by way of Fiume, and on the relations between Italians and Slavs. Moderate opinion in Italy was opposed to any aggressive action such as the unauthorized annexation of Fiume, and argued that the proper course was for Italy to let things stand as they were until the question was somehow settled. The danger of this was that D'Annunzio and his followers who had already forced their government into a position that caused it to be accused of bad faith by the Allies might proceed to further aggressions in the Dalmatian region. This would provoke the Jugo-Slavs too far and possibly bring on a new war in the Balkans. The criticism of the D'Annunzio-Fiume affair from the point of view of moderate opinion among the Allies was that it was practically turning the treaty into a scrap of paper.

On December 9th a compromise was proposed by the Allied Powers, whose main points were reported as follows: Italy to retain control of territories inhabited by 300,000 Jugo-Slavs which had been claimed by her; Fiume to become a free port in a free state under the sovereignty of the League of Nations; the city of Zara to be a free state under the control of the League of Nations and Italy to receive a mandate over Albania. At the close of the year Italy was demanding the control over the diplomatic relations of Zara; the exclusion of the city of Fiume from the free state, and the concession of a passage to the seacoast which would insure the continuity of territory between Fiume and Istria; and finally the annexation of the Island of Lagosta to Italy. Attempts at adjustment were in progress at the close of the year between the premiers Lloyd George and Clemenceau on the one hand and Signor Nitti on the other.

POLAND. A conflict between the Czechs and Poles over the principality of Teschen, that is to say, Austrian Silesia, led to the occupation of this region by the Czechs. It became the subject of discussion at the Conference in the first week of February, and the representatives of the great Powers issued a statement to the following effect: They demanded that the nations which had engaged to submit territorial claims to the Peace Conference should refrain from occupation of such territories. They declared that while the decision of the Peace Conference was pending the Czech troops might still hold the railway line to the north of Teschen, and the mountain regions which they occupied, while the Poles should retain the southern section of the railway, including the town of Teschen; that a commission of control should be sent at once to prevent conflict between Czechs and Poles, and to make an inquiry in regard to the conditions; that the representatives of the great Powers recognized the Czech promise that they would put at the disposal of the Poles, all the available resources of their country in war material, and would grant them facilities for the transit of arms and munitions. It was also declared that the exploitation of the mines should be carried on in such a way as to

avoid an encroachment upon private property, and that the commission of control would have authority to supervise this. Finally, no measure of annexation was to be taken, by either party to the dispute and pending the decision of the Peace Congress, political elections and military conscription were suspended.

Early in the sessions of the Peace Commission a diplomatic committee of the great Powers was sent to Poland to study conditions there. This was undertaken partly in response to repeated appeals of the Poles for supplies. The shortest route for these supplies lay through Danzig, and the question was raised whether the port and the railway should not be occupied by Allied troops. One of the objects of the committee was to obtain from Germany a guarantee that the dispatch of munitions through their territory would not be hindered. Another aim of the committee was to devise a provisional settlement of the frontiers of Poland.

On February 13th it was announced that the German foreign secretary had promised the necessary measures for the safe passage of the Allied Commission to Poland, but stipulated that the activities of the commission should be excluded from the frontiers laid down in the armistice, and it refused to recognize any Polish authority independent of the German government within those frontiers.

The demand that Danzig and surrounding territory should be surrendered to Poland was put forth by the Poles as necessary to their national existence but was attacked by liberal cities as an imperialistic claim contrary to the principles of Mr. Wilson. The Polish Prime Minister M. Paderewski arrived in Paris on behalf of the Polish side of this and other questions at the beginning of April. According to him and his supporters all Polish opinion was agreed that the peace and prosperity of the new Poland would depend upon the annexation of Danzig and the communication with the sea along the River Vistula and the railway system along its banks. The attitude of the conservative press in the Allied countries was illustrated by the spirit of the London *Times* which accompanied the report with the following remark: "Yet the leaders of the Conference were said to be considering the neutralization of the town and territory in question to avoid putting a large number of Germans under Polish rule. This is a half measure which would satisfy neither side and would inevitably lead to conflict. The idea has caused the utmost consternation in Poland." As noted above the Conference decided to create Danzig a free city under the League of Nations.

The difficult and complex nature of the issues between Poland and Ukraine and of the Polish situation generally was such as to make an intelligent decision on the part of the American public almost impossible. The newspapers were flooded with propaganda and with ex-parte statements from which no definite conclusion could be drawn. As an illustration the following points may be mentioned. In the early part of November the complaints of leading men in the new Polish republic were embodied in an open letter and sent broadcast throughout the world. In this practically all the geographical and racial aspects of the peace settlement as it concerned Poland were condemned. The writers declared that less consideration had been shown

to the Poles than to the African negroes. They pointed out the services that the Polish nation had rendered to the Allies, namely, the work of General Pilsudski against the old Russian régime; the anonymous participation of Poles in the Czecho-Slovak expedition in Russia; the refusal of the Poles to take the oath of loyalty to von Bessler; the battle of Kanjow; the services of General Haller in Russia and in France; the steadiness of Poland under German tyranny and her refusal to form a national army under German pay. The writers declared that in view of their deserts they resented the wrongs that had been committed against them. They specified these wrongs as follows: The city and district of Danzig which was indispensable to the expansion of Poland had been taken away from her, contrary to the unanimous decision of the Cambon commission composed of representatives of all the Allied Powers. This had been done under the pretense that some 250,000 Germans inhabited the territory. At the same time, however, a territory inhabited by more than 3,000,000 Germans had been given to Bohemia. Moreover, this German territory as well as Hungarian districts inhabited by Slavs and Ruthenians were given to Bohemia without a plebiscite. In the case of Poland, on the other hand, a plebiscite was required for districts inhabited by an essentially Polish population, namely, the districts of Allenstein, Marienverder, and others. Further than that a plebiscite was being organized in Upper Silesia, the possession of which was indispensable to Polish development, and where according to German statistics there were 1,250,000 Poles against 650,000 Germans. This was in spite of the insurrection on the part of the people against Prussian tyranny. It was noted that the African colonies were relieved from the Prussian yoke without any plebiscite. Again the Vistula had been internationalized although it was conclusively a Polish river and watered almost half of the Polish state. Other rivers that had been internationalized did not belong in any such manner to a single state. The Poles were willing to grant navigation privileges to the Allies, who therefore would not benefit by internationalization. They declared that this measure had no precedent in history. Atrocities had been committed in Galicia by the Bolshevik mob under the incitement of Ukrainian agitators. They had been verified by an Allied commission and were fully as cruel as the atrocities of the Germans, and sometimes surpassed them in savagery. These same Ukrainian agitators, pretending to represent the entire Ruthenian people of Galicia, had placed themselves under the protection of certain governments allied to the Poles. The Allied Powers had taken under their protection that other part of the Ruthenians in Galicia who called themselves Ukrainians, who had been during the war the accomplices of Austria and Prussia. The writers maintained that the Galician Poles formed two-fifths of the native-born population; that the majority of the Ruthenians wished to remain Polish; that the development of Galicia was mainly the result of Polish efforts; that almost the whole history of that country was at one with the history of Poland; that Poland had fought on this territory in defense of Europe against the Mongols for centuries; and that Poland was again defending

Europe to-day against the Bolshevik invasion. Even the Central Powers had not dared to take eastern Galicia away from Poland. The Allies were therefore treating Poland worse than she had been treated by their enemies. Any provisional measure in Galician affairs was rejected by Polish public opinion, for the Ukrainians had chosen the war and the Poles had won it, the Entente having permitted them to carry it on. Poland refused to annul the consequences. The reports of pogroms or massacre of the Jews were all lies. Noisy rumors had been spread that from May 5th Poles had organized a pogrom in Vilna where 2000 Jews were murdered. Since then it had been proved by investigation that the whole thing was a German forgery. As to the pogrom of Lemberg, which the Jews had called a slaughter of innocent crowds, it had been shown that the Jews were armed and were shooting at Polish troops. In the reprisals which followed and which were condemned by Polish authorities 34 Jews were killed. While the Powers placed so high a value on the blood of these 34 Jews they attached little importance to the murder of thousands of Poles by the Ukrainians in Galicia. They had gone so far as to create a commission of international control for the security of the Jews themselves, imposing a limitation on Polish sovereignty. Whereas in Alsace-Lorraine only Germans who had been residents before 1871 and their descendants could enjoy civic rights, no such restriction was placed upon Germans in Poland. The Jews and foreigners in Poland possessed national minority rights. The Jews possessed privileges in Poland which they did not possess either in England or America. The diplomats of the Peace Conference had turned a deaf ear to all proposals and explanations coming from Polish delegates. They had disregarded the proposal concerning Danzig and West Prussia; they had done the same in regard to Teschen and eastern Galicia; and it seemed as if the same thing were designed to happen to any demand for justice on the part of the Poles. The writers expressed the conviction that the Allies had been treacherously deceived by false information coming from their own worst enemies, the Germans, and also by Jewish, Ukrainian, Bolshevik, and other agents. This statement of the Polish question from which it would seem that Poland, although apparently restored to the map of the world, was in a worse condition than she had been after the partitions in the eighteenth century, was signed by such important authorities as the committee of national defense, the Roman Catholic Archbishop of Lvov, the Armenian Catholic Archbishop of Lvov, the superintendent of the Protestant communities, the mayor of several large cities, presidents of leading universities, and editors of important papers.

Documents based on an exactly opposite point of view together with various rumors and reports of travelers quite as bitter against the Poles, were published largely during the year. Among such accounts for example were the various statements on the part of the Jews asserting the atrocities which the Poles denied (see article Jews) the denials and counter-accusations of Ukrainians, Germans, etc., and reports from various quarters supposed to be impartial. One of the many reports illustrating the opposite point of view was that the Poles had ravaged

Galicia and had massacred and robbed the Ukrainians. Travelers reported that as the result of Polish aggression Galicia had been ruined economically, that national life was destroyed, and that thousands had been killed. It was said that when the Austrian empire fell to pieces, the first act of the Poles was to massacre 800 Jews in Lemberg alone. Furthermore the Poles claimed the whole of Eastern Galicia where everybody knew that the population was entirely Ukrainian. It was declared that no robbers and murderers could be worse than the Poles; that they even robbed the people of their shoes and clothing; that they seized all the horses, cattle, and grain that they could find; that the so-called Bolshevik menace was merely a fiction, etc.

At the close of the year Polish forces were occupying and policing the territory in south-west Russia that had been evacuated by General Denikin; their troops were cooperating with the Lettish army; and virtually their entire military strength was engaged in Russia or on the Russian frontier. According to the Archbishop of Warsaw, it was a desperate battle on the part of Poland for the protection of western civilization from the Red invasion. This, he added, was understood by France and Italy, but was not clearly perceived by England. See RUSSIA, paragraphs on *Intervention*.

On November 4th the Supreme Council decided that the chairmanship of the inter-Allied mission to supervise the plebiscite in Upper Silesia, for deciding the question whether it was to belong to Poland or to Germany, should be held by a French representative. At this time it was reported that an American representative would head the commission to supervise the plebiscite in Teschen, demanded by Poland and Czechoslovakia, and that the plebiscite of the Allenstein district of East Prussia was to be supervised under the chairmanship of England, and that of Marienwerder in East Prussia under the chairmanship of Italy. Elections were held in Silesia at the beginning of November which were taken as a probable indication of the attitude of the people in the approaching plebiscite. The Poles in this region had about two-thirds of the population. Several weeks before the elections it was reported that German troops on the pretext of dealing with strikers, had entered the region and had shot down, imprisoned or exiled, many of the Poles. The reports of the elections for local officials indicated that the Germans had been defeated. They had controlled the entire administrative machinery, and were said to have brought in great numbers of floating voters. But according to the report in spite of corruption and intimidation the Poles cast about three-fourths of the vote in the country districts, and about half of the vote in the cities.

BELGIUM AND HOLLAND. There was much discussion in the press of the negotiations between the Belgian and Dutch governments in regard to revision of the treaties of 1839, and a brief summary of the points at issue may be of value. On Feb 11, 1919, the Belgian Foreign Minister, M. Hymans, explained before the Council of the Allies at Paris the Belgian view of the treaty of 1839. The chief clause of this treaty assuring Belgian neutrality, having been violated, he said, the treaty itself was void and must be revised. The treaty of 1839 had been a

collective act of the powers, and therefore it must be revised by those same Powers with the exception of Germany which had not remained faithful to the engagement, and to them should be added Italy, the United States and Japan, and of course Belgium and Holland, who were directly interested. The negotiations resulted in the decision by the Supreme Council that there was need of revision, both in the general interest and in the interest of Belgium. The next stage ended in May with a decision of the Council of Five who had met along with the representatives of Belgium and Holland. The representative of Belgium demanded the meeting of a committee which should propose definite formulas to be substituted for the clauses requiring revision. He said that Belgium was held in a vise, one side cutting off its communications by the Escaut, and the other side, that of Dutch Limburg, commanding the course of the River Meuse. He pointed out the political and economic disadvantages which would result to his country from the system of 1839, characterized as it was by the control which Holland exercised over Belgian lines of communication. The Dutch representatives showed little inclination to renounce this system, maintaining that concession was merely at the option of their government. The appointment of a committee was conceded (June 4th) but its powers were limited in advance by the decision that there should be no territorial change and no transfer of sovereignty. This rendered difficult the revision which the Council had previously declared to be necessary. The next stage was reached on August 20th when this committee held its first meeting in Paris at the Quai d'Orsay. It was under the presidency of M. Laroche and two representatives of each of the great Powers, and of Belgium and Holland. The Belgian delegation emphasized the restrictions which the clauses of the treaty of 1839 placed on the economic development of the country, and the dangers to its security involved in the arrangement in regard to territory and rivers, which diminished the country's means of defense. This they argued was especially serious now that Belgian integrity was no longer assured by the guarantee which had been the keystone of the system of 1839, that guarantee having been shattered by the German invasion. They demanded the right to effect improvements on the waters of the Escaut, not permitted by the former treaty, and the withdrawal from Holland of the right to veto anything pertaining to the administration or use of the river; the guarantee of the right of access to the sea; the authority to cut a canal by way of Limburg toward the Rhine, continuing into Germany in accordance with the treaty of peace which obliged Germany to construct it; an economic convention facilitating Belgian traffic across Limburg; and finally an arrangement which in the circumstances was especially important, that Holland should recognize the duty of defending Limburg which offered access to a German invasion. If conditions in that region, which had formerly been altogether a Belgian territory, did not permit Holland to defend it herself, a convention should be formed with Belgium which would make it possible. It was pointed out that this last clause conformed to the general interest, for the line of the Meuse constituted the defense of the first line of France and Great Britain as well as of

Belgium. Spirit ran high in Belgium; on the other hand the Dutch were disinclined to give way, but they let it be understood that they would come to a compromise. Negotiations between Belgium and the Netherlands were in progress at the close of the year.

THE RUMANIAN QUESTION. Under *AUSTRIA-HUNGARY, History*, and *RUMANIA, History*, brief accounts will be found of the Rumanian invasion of Hungary, her disregard of the demands of her Allies, her persistence in requisitioning Hungarian property to indemnify her losses, and the repeated notes which passed between the Rumanian government and the Allied representatives at Paris in the course of the misunderstanding.

The Rumanian defiance of the Allies by disobeying the Peace Conference and remaining in the Balkan capital, Budapest was widely commented upon in the press during the summer and autumn of 1919. As noted elsewhere the various ultimatums sent to Rumania by the Allies in the Peace Conference had been disregarded. Among the reasons for this were the fact that Rumania having 300,000 troops at her disposal, compulsion of her was a serious matter. Again, the execution of the ultimatum rested with the French troops in the region and it was suspected that French authorities were not inclined to go to extremes. Also, it seemed evident that the Italians would go to the aid of the Rumanians. A lining up with what the French called the American policy might involve France in war with Italy and Rumania, both of whom she desired as allies. There was not much chance that troops would be sent from the United States or Great Britain. Accordingly there was little practical danger to the Rumanians if they did what they chose in Budapest. They therefore stayed and seized provisions and other materials equal in amount, as they declared, to what the Hungarians had stolen from them after they had entered Rumania. The most disquieting feature of the affair was the possible effect of the example, for it was argued that if Rumania could do this the precedent would be followed by other Balkan Powers. Why should not Greece for example refuse to accept the solution in regard to Thrace? Or why should not Poland disregard the demands of the Allies? Comment in the United States was severe for it was estimated that Rumania was acting of her own accord and without countenance. The affair was regarded as the first challenge against the League of Nations. Rumania, however, was not a little state. As the result of the Austria-Hungarian defeat and the Russian downfall the area of the country had become as great as that of Italy and the population was placed at 16,000,000. A portion of the American press complained that in France among the official class as well as among the Italian representatives there was a tendency to blame the United States and to a less degree Great Britain for what was considered the harsh treatment of Rumania. As Italian and French representatives on the Supreme Council had approved its action, there seemed to be no color to these accusations, but in the French and Italian press there was a disposition to find excuses for Rumania in every instance, and to oppose any effort toward keeping her within bounds.

The Rumanian point of view is brought out in

the following attempt of a French writer to review the affair impartially: The main point charged against Rumania was that, taking advantage of her situation as the sole Power capable of defending eastern Europe from Bolshevism, she had invaded Hungary, pillaged the country, and in spite of the remonstrances and direct commands of the Allies had persisted in remaining there. There were faults on both sides. In the first place Rumania had made a mistake in the beginning by claiming too much territory. Early in the Conference when the question of the Banat (see below), was brought up, M. Bratiano, the Rumanian representative, claimed for his country the whole of the Banat, including regions in which the Serbs had an immense majority. In doing so he appealed to the treaty between Rumania and the Allies, but this very treaty, he claimed, should be extended in another direction—that is to say, while going beyond the terms of the treaty in his other claims he insisted on pressing this claim on the basis of the treaty. This seemed an unfair attitude. On the other hand, while the Supreme Council had a right to provide certain guarantees on behalf of national minorities, it went too far in its minute application of this principle, and so irritated the Balkan states concerned. More important, however, was its way of treating the Magyar question, that is to say, the setting up of the Bolshevik régime at Budapest. Its policy in this respect was illustrated by the mission of General Smuts, the arrest of the military operations begun by the Czechs and Rumanians, and its laxity and hesitation in the face of the Bolshevik movement in Hungary. Bela Kun first attacked Slovakia and then turned upon Rumania. The Rumanians were at least in part justified in taking the initiative and invading Hungary. They occupied the capital and the régime of Bela Kun fell. The Rumanians pointed out that there was no other solution possible and they could not understand the ill humor of their Allies. They held that it was the latter's fault and the result of their shiftings and self-contradictions that Rumania had been obliged to take this course. Having once possessed herself of the capital Rumania undoubtedly went too far in making reprisals. It was claimed on her behalf that the so-called pillage concerning which the Allied press had so much to say was merely the recovery of what had been stolen. It was said that the very same objects which had been taken by the Hungarians from Rumania were recognized, and naturally were re-appropriated. It could not be denied that the Hungarians had robbed the Rumanians right and left when the war was in their favor and the Rumanians naturally felt justified in turning the tables when they had the chance. On the other hand this action of Rumania was directly opposed to the principle asserted by the Supreme Council that this property belonged to the Allies in command and the Rumanians were without doubt technically in the wrong, but it was argued that it was expecting too much of human nature to require the victim of a theft to refrain from helping himself to his own property when he had the chance. Unfortunately there was strong reason to believe that the Rumanians helped themselves to many things that did not belong to them. Although they had been outrageously treated during the war by

the Hungarians, they were not within their rights when they undertook to recoup themselves, for they did so without any control on the part of disinterested parties. Hence their requisitions often passed the limit of justification, and it was significant that the Rumanian General Holban who was in control of the army of occupation committed suicide on the eve of the investigation which the Rumanian government had ordered after Sir George Clarke had come as a delegate from the Allies to look into the situation. The Supreme Council having received the report from Sir George Clarke as well as a communication from the Rumanian government sent a long note in November to the Rumanian capital. In respect to the requisitions of Hungarian property it proposed to send into Rumania a delegation from the reparation committee, and to send into Hungary an inter-Allied committee including Rumanian officials with full power to verify the requisitions and to take immediate measures in regard to them. In respect to the western frontiers of Rumania and the measures for the protection of national minorities the Rumanian government had made a last attempt to obtain some territorial advantages. It demanded, for example, that it should receive the city of Bekes-Csaba which had been assigned to Hungary, that it should control both banks of the Maros as far as the Tisza, and that to the north of this river the frontier should be slightly extended toward the west in order to include the railway line from Arad to Satmar. The Supreme Council replied that while it had no intention of trenching upon either the interests or the independence of Rumania, it was impossible to reshape the clauses of the treaty since they had already been communicated to all the Allies. However, it admitted that there might be some internal readjustments later on. Behind the criticism of the Rumanian attitude during the entire year lay the feeling that her course was especially unworthy because in any case she was gaining as the result of the war far more than she had any reason to hope would be her portion down to the time of its close.

French opinion in regard to the Rumanian question is illustrated by the following discussion: In the first place the familiar objection to the treaty was raised that it involved the derogation of national sovereignty by the creation of the League of Nations. In its scheme for the League of Nations the Peace Conference had treated certain nations as of no importance and as incapable of governing themselves, assimilating them in this respect to the condition of Turkey. Racial and religious minorities were properly to benefit from the common rights of each of the Rumanian, Czech-Slovak, and Jugoslav states, and they were to enjoy the special privilege of being particularly under the care of the League of Nations. The treaty did not confine itself to regulating the protection of minorities, but it required the three states above-mentioned to accept in a special treaty the provisions that the great Powers wished to make with regard to the liberty of transit and international trade. Rumania accepted this last clause on condition that the arrangement should be made in agreement with herself. This was refused. The members of the Supreme Council did not admit that states with limited interests despite their sacrifices in the war had a right to discuss the treaties with them, but only

to take them or leave them, and while they negotiated with Germany and with Austria, they did not negotiate with Rumania or with the other secondary states. The French *Temps* remarked on this subject: "At the moment when independent states, allies of our country, are obliged to sign the stipulations which detract from their dignity and their sovereignty, we must disclaim so far as it depends upon us the responsibility of France. French opinion has never accepted what is now being done. It did not understand the alliance and victory in that manner." Rumania persisted in refusing to sign the Austrian treaty and her bad humor was easily understood. She was reproached with having gone to Budapest, but it was not her fault if she went there alone. Moreover it was not the question of Rumanian requisitions in Hungary which chiefly irritated the Rumanians. Their refusing to take part in the ceremony at Saint-Germain was caused chiefly by measures formulated in article 60 in regard to the protection of racial and religious minorities. This was done under Anglo-Saxon initiative. This way of treating Poland recently and of Rumania at present as half savage nations addicted to pogroms is highly disagreeable to the Powers that are its victims. Rumania estimated that she had already by her decrees sufficiently safeguarded the rights of minorities. Moreover she argued that in protecting and even favoring in this obvious manner the German and Hungarian minorities on her territory they were encouraging irredentism instead of suppressing it. Mr. Balfour in a note addressed to Rumania in the name of the Peace Conference had expressed the surprise of the members at seeing the Rumanians reject these demands which Poland and Greece had accepted. Nevertheless there was warrant for regarding these restrictions as humiliating. The policy of the Peace Conference toward Rumania, exploited by adversaries of the governments of the Entente, would have the actual result of making the Rumanians more and more unyielding in regard to the requisition of territories.

There was, however, criticism of Rumania even in French quarters suspected of imperialism. It was pointed out, for example, that although the Banat was given to Rumania by the agreements of 1916, this was before she had received such large acquisitions elsewhere. What Rumania acquired in Bessarabia largely made up for it. Rumania, apparently cherished ambitions in Bessarabia and pursued a policy that Russia, if restored and invigorated, would not approve. It would appear that Rumania, tempted by the helplessness of Russia and the safety with which she could pursue an anti-Russian policy, had taken measures that were contrary to European interests generally, and even her own in particular. Her supporters in France admitted that she ought to be a moderate and controlling element in the Balkans and that it was unworthy of her to attempt the Balkanization of the Russian state. On December 3d a note of the Supreme Council to Rumania was made public which practically amounted to an ultimatum giving Rumania six days in which to conform to the demands of the Allies. The note reviewed the situation from the beginning, drawing Rumania's attention to her continued disregard of the frequent demands of the Allies since her occupation of

the Hungarian capital at the beginning of August. Rumania according to the note had brought about the present situation by her refusal to sign the treaty with Austria and the treaty which guaranteed the rights of minorities. This, followed by her persistent occupation of Hungary had brought about an impossible situation. The Allies had been most patient but in spite of their explanations and urgent demands Rumania had continued in her course. Recently the Allies had sent a special delegate, Sir George Clarke, to Rumania to endeavor to adjust matters but Rumania though conciliatory in her language continued to be obstinate in her action. On November 15th the Supreme Council had decided to make a final appeal to the wisdom of the Rumanian people and had fixed upon a period of eight days in which to receive the Rumanian reply. The Rumanian reply did not conform to the expectations of the Supreme Council which now must insist upon a definite answer within the period above-mentioned. See RUMANIA.

THE BANAT OF TEMESVAR. After the armistice Serbian troops occupied the Banat of Temesvar of which certain parts were claimed at the same time by the Rumanians. Later a zone was created for French troops. This was understood to be a provisional arrangement pending an adjustment. The Rumanian prime minister, M. Bratiano, maintained the validity of the secret treaty which Rumania concluded with Great Britain, France, Russia and Italy in the summer of 1916. He said that the Banat of Temesvar was geographically and economically a unit which the secret treaty had rightly assigned to Rumania, since the Rumanians formed a large per cent of the population. The River Danube was the natural and military frontier between Rumania and Serbian territory. There was no need of arguing from such principles, however, he declared, because the whole matter was settled by the treaty. On the other hand, the Serbian minister at Paris, M. Vesnitch, declared that the secret treaty could not be recognized by the Serbian government, because the latter had not been consulted, and its text had not even been communicated to Serbia. He argued from the race composition and the history of the country that the western districts beyond the Danube ought to fall within the Southern Slav boundaries. Dr. Trumbitch, foreign minister of Czecho-Slovakia, made a formal declaration on behalf of his government that the secret treaty with Rumania was null and void. He pointed out that the claims of Czecho-Slovakia did not apply to the whole Banat, of which he admitted that a portion should be assigned to Rumania as the population was mainly Rumanian. The rest of the country was overwhelmingly Serbian, and should be assigned to the new southern Slav state on racial grounds. The conflicting claims were laid before the Conference at the beginning of February, and they were under consideration in March. No definite settlement was reached, however, and the matter was frequently debated in the course of the year.

The essential points in the controversy were as follows: The Banat according to the Rumanians is not merely a geographical term, but is a region marked off by economic, ethnographic, and political characteristics as well as geographical from the neighboring countries. The Rumanians claimed that their kinsmen forming

a solid mass in three-fourths of the country and separate groups scattered elsewhere in it plainly dominated the Banat. They said there were more than 600,000 Rumanians to 240,000 Serbs. The province is divided into two parts geographically, namely, the plain and the mountain, each being dependent on the other. Transylvania itself was dependent on the Maros and the Tisza. Hitherto the Serbs and Rumanians had lived on terms of amity because of the definite frontier that the River Danube constituted between them. Rumania did not even think of uniting to the kingdom the 400,000 Rumanians to the north of Servia in the valley of the Timok. The division of the Banat would result in economic disorganization and inevitably in conflicts. The treaty of August, 1916, with the Allies had given her the promise of possessing the entire Banat. The Serbs, according to Rumanians, unjustly refused to take that treaty into consideration. Serbia was not in a position to take part in the negotiations, and Russia as guardian of the Slavs served as a guarantor of its acceptance by the southern Slavs. And the Serbs even though they were ignorant of the text of the treaty had profited from it, for Rumania had entered the war, and as a result of that enabled the Allies to hold Salonika and so assure eventually the liberation of Serbia.

The Serbs on the other hand did not claim the entire Banat. They recognized that the Rumanians were in the majority in the counties of Caras-Severin and Timis, but they claimed a majority in the county of Torontal. They took their stand on the principle of national determination and asked that the Serbs of Temesvar be assigned to Servia, but they claimed the county of Torontal. There was no real unity they said in the Banat. History showed that the Banat had been peopled by the Serbs when they were driven back by the Mohammedans and that it had supplied Serbia with a number of her famous men. The better plan, according to Serbia, was to refer the subject to the actual wishes of the people, that is to say, to hold a plebiscite. The treaty of 1916 they contended had been nullified by subsequent events. Rumania had gained on the coast of Bessarabia territories which she had had no reason to expect. These unhoped for advantages ought to dispose her to a compromise.

These were the main lines of arguments on each side. There was a spirit of conciliation on the part of both governments and no disposition to forget that they had been companions in arms.

SCHLESWIG. It was decided at the Peace Conference that the portions of Schleswig which had been taken away from Denmark by Germany as a result of the war of 1864 should decide by plebiscite whether or not they should be attached to Denmark, and provision for this was made by the Treaty of Versailles. Account had to be taken of the German policy of denationalization and the fact that in several regions there was a large majority of German inhabitants. For the purpose of the plebiscite therefore Schleswig was divided into three zones. The first included the territory to the north of the line reaching from the south of Tondern to the north of Flensburg. In this section the only centre that was completely Germanized was Tondern and the surrounding country was entirely Danish. The population here was called

upon to vote as a unit, and men and women of more than 20 years of age were called to the polls. In this first zone the plebiscite was to be held in February. The second zone comprised the centre of the German population, namely the city of Flensburg. To prevent these German masses from overwhelming the surrounding territory it was decided that the vote here should be taken by districts. The third zone included both banks of the Kiel Canal. It was considered completely German and was excluded from the plebiscite.

THE BALTIC PROVINCES. In the first weeks of the Conference the question of German designs in Esthonia and Livonia was among the many urgent problems, and was presented by the Lettish delegation, who declared that an alliance between Russia and Germany was menacing their own country as well as the neighboring states. Germany foreseeing defeat by the Allies had taken the Russian northern army into her pay. When this army was dispersed, the German government tried to secure concessions from the provisional Lettish government. Upon the latter's refusal the Germans prevented the mobilization of the Lettish troops which had been gathered against the Bolsheviks, and in other ways did all they could to help the Bolsheviks, cutting off all railway and postal communications, surrendering fortresses, railway material, and munitions to them. By degrees the German troops had passed over into the Russian service. At the present time Germany was offering to assist the Lettish government if the latter would give property rights to German settlers. In short, the Germans were accused of trying to retain control over Esthonia, Livonia, and Lithuania as well as the Ukraine, which states were seeking their independence. The Lettish government appealed to the Allies for aid in their struggle against the Bolsheviks. In accordance with the armistice German troops occupying parts of what had been the Russian empire were to be withdrawn as soon as the Allies thought it suitable, in view of the internal situation of Russia. The danger of allowing German troops to stay in Russia was thus brought definitely before the Conference early in the year, and it continued to be pressed upon the attention of the public down to the year's close, the press being full of rumors, and protests on the subject of the army of General von der Goltz in the West. See *RUSSIA, History*.

THE TURKISH QUESTION. The elections gave the power to the Young Turks. (See *TURKEY, History*.) Mustapha Kemal was in control of Asia Minor and was reported to have taken a savage vengeance on the Armenians. The French and English were occupying Syria, Cilicia, and Mesopotamia; the Italians, Adalia; the Greeks, Smyrna, Aidin, and the Aegean islands. The region around Trebizond had become a Greek republic. An Armenian republic had been set up with Erivan as the capital. The Kurds in the region of Diabekr had for a long time been virtually independent. According to the last reports of the year the Supreme Council had decided to maintain the Sultan at Constantinople. But there was still much protest against it in all the countries of the Allies. The arguments for it had to do with the offense to Moslem sentiment throughout the world that would result from such a course. The arguments against it urged that the present dynasty was not the

legitimate spiritual head of Islam. It was a usurping dynasty and a large part of the Moslem world denied it. It was argued that Mohammedans had never venerated a purely moral leadership and that they would not be shocked by the return of the Turks to Anatolia and the making of Constantinople a free city. Anatolia, including the vilayets of Broussa, Kastamouni, Angora, Konieh, and parts of Aidin and Sivas, with some 384,000 square kilometers of territory and about 4,000,000 inhabitants, was not a despicable domain. It had outlets on the Black and Aegean seas and on the Mediterranean, between the Greek and Italian possessions.

While the League of Nations seemed practicable it was generally assumed that it would settle the question of appointing a mandatory Power and that the United States was to be asked to act in that capacity. It was understood that President Wilson was favorable to such a solution. In Europe it was realized that America had no selfish interests in respect to Constantinople whereas the other countries on the Continent did have such interests. Hence there was a strong desire among certain European politicians that the United States should accept such a mandate. Lloyd George at the close of the year declared emphatically in its favor.

On the other hand writers in the conservative press of both France and England opposed it. British writers argued that Great Britain was plainly indicated for that function. They argued that America was not inclined to undertake the burden and was not fitted for it by experience. It involved the maintenance of troops in Turkey and this was not acceptable to American opinion. America had had no experience in ruling populations of the East, and would have everything to learn. Much time would be thus lost while England, familiar with the ground and having troops at hand, was ready to carry the work through promptly and efficiently. England already had Egypt and she would have Palestine and Mesopotamia. There would be no security in these regions so long as Constantinople was in the hands of a foreign state, perhaps even a hostile state. On the other hand, if England accepted the mandate over Turkey, it would simplify the problems of Egypt, Mesopotamia, Palestine, and India, for Constantinople was the key of all those regions. They went so far as to remark that without Constantinople it would be impossible for Great Britain to maintain her Asiatic possessions. Public sentiment in the United States, meanwhile gave no sign that any reliance could be placed on this country as an aid in the solution of the problem.

European politicians at the close of the year were still divided on the question of driving out the Turks from Europe. Lloyd George had declared that the Turks must be put out and the French foreign office was reported to be in favor of their remaining. The question was still open at the close of the year and was complicated by the rapid growth of nationalist sentiment in Turkey, where the parliament had lately fallen under its influence and showed an inclination to fight any project that would drive the Turks from Europe. As to a mandate it would have to be given to the French, the English, the Greeks, or possibly even to the Italians. France was opposed to England's control of Constan-

tinople and England was opposed to the French control. At the close of the year France was arguing that the driving out of the Turks would make trouble for her among her Mohammedan subjects in Africa. M. Gabriel Hanotaux declared: "The fate of this great international port affects the future control of Russia, of Austria, of Hungary, of Czecho-Slovakia, of Poland, of Rumania, of Bulgaria, of Turkey, of all the countries bordering on the Red Sea, and in a general sense, the future of all countries bordering on the Mediterranean." He advocated keeping the Turks in control of Constantinople but with navigation rights controlled by an international commission like that for the Danube.

A number of disturbing circumstances complicated the problem of the Allies at the close of the year. A Moslem-Bolshevist administration under Enver Pasha was reported to have been set up. Arab tribes were in revolt against the British army of occupation in Mesopotamia. Finally the forces of Mustapha Kemal were said to be concentrating on the French, Greek, and Italian fronts of Syria, Smyrna, and Adalia, respectively.

THE ARAB CLAIMS. On February 6th the claims of the Emir Faisal (or Feisul) were presented on behalf of the Arabs. These conflicted, according to the opinion of French publicists, with the rights of France in Syria. He insisted, however, that he desired absolute independence for the Hejaz (Hedjaz) alone. As to the rest of the Arab people he wished them to be independent of Turkey, but did not insist upon their absolute independence. He proposed that Arabia should be divided into a series of small states in accordance with their tribal and economic necessities, and should be under a mandatory chosen from among the great Powers by each of these states. He hoped, however, that the whole of Arabia would demand the same mandatory and he argued that no part of his country should be placed under any Power against its will. According to the French point of view the claims embraced all the Arab-speaking lands of the Ottoman empire, including Syria and Mesopotamia, and thus would involve the two great capitals, Damascus and Bagdad. Moreover, the Hejaz had practically been created by Great Britain and was under special obligations to that Power. As one writer pointed out the claim on the part of the Hejaz to Syria would cause friction. Syria would be under the guardianship of the French government and if it were also under the suzerainty of Arabia it would lead to friction with Great Britain. Then the secret treaty of 1917 came up for discussion. This fixed the spheres of influence in Asiatic Turkey for Great Britain, France, and Russia (February, 1917), recognizing an independent Arab state or a federation of Arab states. By this also the French sphere of influence was recognized as embracing the Syrian coast and the vilayet of Adana, and the southern region limited by the line Aintab-Mardin on the south, while Great Britain was to acquire the southern part of Mesopotamia with Bagdad, and the ports of Haifa and Acre in Syria. The district between the French and British regions was to form an independent Arab state. According to the French, their relations to Syria were such that it was necessary to treat Syria as a separate entity. The attitude of France toward Syria was based on long tradition, for she had

for centuries held the position of protector of the Holy Places, and of Catholic interests in the East. Apart from this, economic reasons such as the importance to French capital of the Syrian trade were operative. The question of Syria had already been widely discussed before the close of 1918. During the entire year 1919 it was the subject of incessant controversy, frequently marked by the ill-feeling of the ultra-nationalist writers in Great Britain and France, and was still unsettled at the year's close.

THE SYRIAN QUESTION. The attitude of prominent French writers on the Syrian question may be illustrated by the following views expressed by M. Maurice Barrès. France, according to him, had an incontestable claim to control the four cities of Damascus, Homs, Hama, and Aleppo, and French opinion would never submit to exclusion. It was a matter of surprise that the French General Gouraud did not occupy them. (See SYRIA.) The control by the Arab prince Faisal, was described as a comedy. France had exactly the sort of genius that fitted her to deal with the Arabs as was shown by her success in Algeria where the natives had splendidly supported her during the war. He compared the French administration of Algeria with the British administration of Egypt, and said that it was intolerable that England should set up a government by the Arabs of Hejaz in Syria. Prince Faisal had nothing to do with the cities above mentioned and France could be trusted to bestow on them the sort of government they required. Faisal according to M. Barrès was a man of straw without title or importance. What if he had served England in Arabia? That was not to be compared with the services of France to the Allies at Verdun. Moreover, if England wished to reward the prince by giving him a kingdom, let her place him at Bagdad. It would be a great mistake if French public opinion should take the substitution of French troops for British as anything but a first step in the right direction. The British troops must be replaced by French in all the regions where French interests prevailed, and intrigues of English agents in those regions must be thwarted. He called upon French writers to protest, because if they did not do so the English government might assume that they were indifferent. In general he said the breaking up of the Ottoman empire caused an enormous loss of influence for France, and it was the duty of France to take care that this loss of influence did not attain the dimensions of a disaster. England and France had supported each other in their common interest in a brotherly spirit and it was impossible that England should oppose the rights that France possessed in Syria, Armenia, Anatolia, and Constantinople. He quoted the complaints of the French friends of Syria to the effect that all the interior, especially Damascus, Homs, Hama, and Aleppo was occupied by English troops, formally acting in the name of the Allies, but in reality against the interests of the French; and that French interests were undermined in a subtle manner by the English. At Damascus as in other large cities there were a few French officers, but they were lost in the crowd of English and Arab officers, and France counted for nothing in these countries. Their people would have unhesitatingly declared for the French, if the French had been first on the ground.

Foreseeing a plebiscite in the spirit of President Wilson's principles, every one but France had carried on a campaign to win public sentiment. Some of the people declared for the Arabs, others for the English, and still others for the Americans, and petitions were being circulated in the cities and villages against the interests of France. Apparently the English assumed that France had her share already, because she was in possession of the Libanus. There indeed as well as at Beirut French influence retained all its former authority, and the administration in large part was in French hands. French officers formed a powerful majority and enjoyed there a certain liberty of action, although they were under the orders of General Allenby. Apparently it was assumed that the spheres of influence had already been distributed and that France was relegated to the narrow strip of coast from Saint John of Acre to the confines of the Taurus, a region hardly as large as the plain of the Bekaa; while an Arab prince whom England expected to control possessed all the rest of Syria. The point of view of which the above is a fair sample was expressed in numberless articles, and rested on the authority of well-known French writers.

The Arab side of the controversy was presented by Prince Faisal on November 5th in the course of an interview. He seemed to argue that the agreement between France and England in regard to the substitution of French troops for British was contrary to the understanding of the Arabs with Great Britain. He said in the first place that all Syria including the coast fell within the sphere of Arab independence which Sir Henry MacMahon had promised in 1915. In the second place he appeared to argue that his authority extended not only over all Syria, but also over Palestine. The British note of Oct. 24, 1915, addressed by Sir Henry MacMahon to the Sherif of Mecca, contained, however, the following specifications: The districts of Alexandretta and Mersina, and the portions of Syria west of the region of Damascus, Homs, Hama, and Aleppo could not be considered as purely Arab, and must be excluded from the territory to which the arrangement applied. The note agreed to the Arab sphere subject to these modifications. "As to the territory within these limits, while Great Britain was free to act without detriment to the interests of her Ally France, I am authorized by the British government to give you the following assurance and to make the following reply to your letter: Under the reservation of the modifications mentioned above, Great Britain is disposed to recognize and support the independence of the Arabs in the interior of the country included within the limits and frontiers proposed by the Sherif of Mecca." From this according to the French view it appeared that Great Britain had always excluded from the regions considered as purely Arabic, not only the Libanus, but the whole Syrian coast region west of the cities above-mentioned, that is to say, the region where French troops had been substituted for the British; also that neither Great Britain nor France had engaged to impose the personal authority of Prince Faisal in the regions that had been called Arabic, whether comprising the four cities, or Palestine, or any other Arab-speaking territory.

The agreement between M. Clemenceau and

Lord Allenby concerning the relief of the French troops was discussed in the Parisian press in October. At the same time much comment followed the publication of the British declaration that the French government had been fully informed of the British arrangement with the Arabs previous to the agreement with France in 1916. There was still dissatisfaction expressed in the French journals. It was pointed out that when the British armies were advancing, under Generals Allenby and Marshall, the British government seemed to admit that as a matter of course, Mosul, which had been reserved to the Arab régime by the agreement of 1916 under French influence, was henceforth to belong to the English zone, and that Palestine for which the same agreement provided an international control was destined for a British mandate. At the same time that the zone of French influence was thus reduced, the Arab control over Damascus, Hama, Homs, and Aleppo as well as Mosul, had been changed to the disadvantage of France, for it evidently was not to be a native state under French influence, according to the 1916 agreement, but a state over which England was to exercise a sort of protectorate as against the French. The organization of this state under British occupation and by British aid had taken place without the coöperation of the French, without even consulting them. This exclusion and the spirit of the organization thus created or at least tolerated made the arrangement seem as if expressly formed to shut out French influence from the internal affairs of Syria. The French press complained that the substitution of their troops (noted in the article on SYRIA), did not change the situation, but on the contrary maintained it in Syria. To be sure, the situation was only provisional, pending the decision of the Peace Conference, but the Peace Conference had not shown itself especially vigorous in changing situations that had become accomplished facts. Meanwhile Palestine was entrusted to British occupation and so was the region of Mosul. At the same time it was not decided that the French troops should replace the British contingents in the interior of Syria. The maintenance of order over the Syrians and of the rights of the religious, national, and political minorities was left to the small Sherifian army which had been created without French coöperation and apparently to prevent the justification of a French occupation. Moreover, the Sherifian government in spite of its vigor in recruiting had only partisans here and there among the Moslems. There was sharp criticism in the French press. For example, a prominent journal went so far as to say that this provisional arrangement was the worst that could be imagined. The British government had justified its policy of arranging things with the Arabs without the knowledge of France at the very time when they were acknowledging by the agreement of 1916 French influence over the country which they were mortgaging, by publishing a little note saying that a representative of the French government, M. Picot, had been kept informed of the whole course of negotiations between the English agents and the Sherif, Hussein. No proof of this however was afforded. The text of the letters or the mandates of the meetings were not made public. It was possible that M. Picot had been informed of the general sense of the correspondence of

October, 1915, between the British agents, Sir H. MacMahon and the Sherif Hussein, without having had any idea that the rights of France in Syria were reserved in a much vaguer manner than those of England in Mesopotamia, where it was definitely stated that she was to have a special administrative control over all the provinces from Bagdad to Bassorak. The French press demanded a fuller explanation and especially the publication of the documents. The agreement of 1916 recognized that the four cities of Damascus, Hama, Homs, and Aleppo were to be administered by the Arabs under French influence. The French had no means of knowing at that time that the organization under the British occupation would not take such a form as to exclude French influence. Hence the Clemenceau-Allenby arrangement was coldly received. The French declared that they might not especially object to limiting the relief by the French troops to the littoral if in the interior there were a friendly power that was really accessible to French influence. As matters stood they could not believe this to be the case. At present the British method of limiting as they had done the relief by French troops gave them the appearance of protectors of the government which according to the understanding was to be advised and guided by the French, and thus they continued to act in a spirit inconsistent with the agreement of 1916.

THE CLAIMS OF GREECE. The position of Greece was indicated before the meeting of the Conference in an important statement by M. Venizelos. The Greek nation, according to him, comprises 8,250,000 inhabitants of whom only 4,300,000 live in the Greek kingdom, the others being distributed as follows: 731,000 in Thrace and in the region around Constantinople; 151,000 in Epirus and Albania; 43,000 in Bulgaria before the Balkan wars; 1,694,000 in Asia Minor; 235,000 in Cyprus; 120,000 in the Dodecanese; finally about 1,000,000 scattered in various other regions, especially in Egypt and the rest of Africa; in North and South America, and in southern Russia. Leaving out these scattered populations, whose interests naturally could not be regarded, there remained 3,000,000 Greeks who were living at present under the foreign yoke, aspiring for union with their mother country. The question was what could be done for them. In the first place, Thrace along with Constantinople with its 731,000 contained, according to Turkish figures, only about 112,000 Bulgarians. Moreover, the Bulgarians themselves had so far recognized the Greek character of Thrace that in 1912 it was necessary to collaborate with them in the matter of elections against the programme of the young Turk party for nationalizing the region, and it was understood between Greeks and Bulgarians that a political coalition should be formed in Thrace, in which seven of the candidates were to be Greeks and only one Bulgarian. Thrace therefore might appeal to the principle of nationality so often proclaimed by President Wilson and the Allied Powers during the war on behalf of its union with Greece. Such an extension of the Greek frontier would deprive Bulgaria of access to the *Ægean*. But the economic interest of Bulgaria is not so essential that it ought to impose on the Greeks the necessity of eternally remaining under the yoke of their neighbor. Moreover, although Bulgaria has already

a coast line on the Black Sea which under the guarantee of free passage in the straits would be open and free, Greece would consent to allow it a commercial outlet on the *Ægean*, and this privilege would also be granted by the other Powers. In addition to the principle of nationality, there were urgent reasons of security which constrained Greece to demand the part of Thrace, reaching from the summit of Koula, and following the course of the Arda to the Maritza, which strikes a Turco-Bulgarian frontier of 1913. The submarine campaign was a grievous lesson to the Allies. Now if the Bulgarians kept the Thracian coast, they would have an important base for their submarines at Porto Lagos, and thus threaten communications between Macedonia and the islands. At present the fate of Constantinople and consequently of its Greek population was unsettled. That population nearly equals the Turkish. Now if Constantinople was not to be returned to Greece to form the seat of an international state, destined to guarantee the liberty of the straits, the Greek national claims over the rest of Thrace would naturally be strengthened. In any case if the twelfth article of President Wilson's programme had not lost its force, Constantinople was not to remain under Turkish rule. The Turkish sovereignty then would be maintained only in the Turkish regions of the present empire, according to President Wilson's formula. It was evident then that on the same principle important regions of Asia Minor should be annexed to Greece. These regions which could justly be claimed by Greece were the vilayet of Broussa, the vilayet of Aïdin with the exception of the Sanjak of Denizli which is almost exclusively Turkish, and the islands, which are the garden spots of the coast. This would deliver about 1,188,000 of their Greek kinsmen from the Ottoman yoke, whose oppression had been worse than ever during the war. Epirus presented a delicate question. After the hasty departure of the Prince of Wied the British minister at Athens in the name of the Entente governments asked the Greek government if it would be willing to proceed to a new military occupation of north Epirus in order to maintain order. The Greek government replied that it would accept the mandate on condition that it had the consent of Italy as well as that of the Allied Powers. An agreement was reached under British influence by which Italy should occupy Vallona, and Greece north Epirus. The question of these occupations should then be left to the Peace Conference. It was tacitly understood, however, that if, after the peace, the occupation of Vallona by Italy was confirmed, the Greek occupation of Epirus should also be definitely recognized. Also by recognizing in the treaty of London of Apr. 6, 1915, Italy's right to keep Vallona, the Powers stipulated that the limits of this occupation were not to pass beyond the frontier of north Epirus to the south. North Epirus is essentially Greek. The National Committee of Control which treated in May, 1914, with the delegates from Epirus then in a state of insurrection thereby recognized that the majority was Greek. As to the islands of the eastern Mediterranean they were entirely Greek and should be returned to Greece. In regard to the Dodecanese, M. Venizelos declared that he hoped Italy would take the initiative in proposing the return of the islands to Greece,

By Permission of The Macmillan Company

CENTRAL EUROPE ACCORDING TO THE PEACE TREATIES OF 1919

assuming from the international point of view that they still formed an integral part of the Ottoman empire. He concluded as follows: "I remain convinced that the great neighboring nation would not wish to impose its sovereignty on a population that was purely Greek. I am happy to express to you my keen desire for close coöperation in the future between the Greek and the Italian peoples." The claims of Greece were still unsettled at the close of the year. See GREECE, *History*, TURKEY, *History*, and the preceding paragraph on *The Turkish Question*.

ANGLO-PERSIAN AGREEMENT. According to the convention between Great Britain and Persia which caused much comment during the summer and was criticized sharply in the French press, England was to aid Persia in reorganizing its affairs, but was not to encroach upon her sovereign rights. Before the war Persia had been divided into three zones: The Russian in the north, the British in the south where important petroleum deposits existed, and a neutral zone in the centre which however tended to be more or less under the control of both great Powers. The attitude of Persia during the war was uncertain. The German influence predominated for a large part of the time, and in the summer of 1918 the Vizier denounced all the treaties signed with foreigners. This, however, went too far for the young Shah, who realizing the danger of such a course dismissed his parliamentary ministers at once. At the end of the war a Persian delegation was sent to Paris, but the Conference having other things on its hands the Persian government decided to approach England alone as the great Power that had been in close relations with it. The agreement consists of two parts, a political understanding and a financial understanding. In the former England agreed to respect absolutely the independence and integrity of Persia, but the convention contained three articles which, according to the French, were inconsistent with this engagement. In these articles the British government declared that it would furnish at the expense of the Persian government military officers, munitions, and supplies such as should be deemed necessary by the commission of experts, chosen from the Persian and the English, which should meet immediately to determine Persia's need in respect to a military force sufficient to maintain order. The British government, recognizing the urgent need of improving communications for the purpose of extending trade and overcoming the famine conditions, agreed to coöperate with the Persian government in encouraging Anglo-Persian enterprises for railway-building, and improvement of transport generally. Nothing would be done until expert advice had been rendered and the two governments had come to an agreement upon the plans. It was further agreed that a mixed commission of experts should immediately be named for the examination and revision of the customs duties in order to bring them into harmony with the legitimate interests of the country. In France it was pointed out that this was very advantageous for England; that its strategic importance was self-evident. However, the military features appeared to guarantee security for all foreign residents, and as to the financial provisions foreigners also would profit from them. Persian finance hitherto had been in a precarious condition, for the government

had borrowed right and left, and expended the money, no one knew how. Great Britain was willing to advance £2,000,000, but as a guarantee stipulated that she should maintain in Persia a financial adviser to see that the funds were properly expended. The French saw in this the advantage that their own debts might be paid. As to its relation to French interests, the French did not deem that it was in any way unfavorable. They remarked that the chief wealth of the country lay in its petroleum resources, of which the exploitation had been granted 17 years ago to a British Company in which the government was the chief stock-holder. Aside from this the country presented few possibilities of profitable development on account of the lack of transport. French rights in Persia consisted of the permanent and exclusive privilege of archaeological excavation. Moreover, in several branches of the Persian administration, especially in education, there was a certain number of French officials. The British gave formal assurance that all French rights would be fully respected. French capital in Persia was so unimportant as hardly to require mention. In London it was hoped that French opposition to the arrangement would disappear. In general the English argued that France would in the long run certainly profit from the modernization of Persia by means of French officials, who, as the British pointed out, were under the orders of the Persian government. There was little confidence in France in this so called modernization, for Persia was compared to Egypt in that respect. The French press declared its regret that, in spite of the close union between France and Great Britain of the last four years, they had been left in complete ignorance of the negotiations. They characterized this as a lack of courtesy, if not a lack of confidence. In Great Britain the French opposition was associated with the anxiety in regard to Syria. The French press in fact had expressed the fear that French designs in Syria might be overreached by secret diplomacy, and the secrecy of the Anglo-Persian arrangement added to this uneasiness.

ATTITUDE OF GENERAL SMUTS. The course of General Smuts both before and after the Conference drew general attention as representing the liberal view of the treaty throughout the world. It was General Smuts who had taken a leading part in drafting the constitution of the League of Nations, and who ever since the armistice had stood as the leading exponent of such a settlement as would accord with the aspirations of democracy and the interests of permanent peace. Many provisions of the treaty were incompatible with his point of view, but he thought its acceptance was less dangerous than its refusal. Accordingly, while protesting against certain of its terms and saying that excessive indemnities could not be imposed without danger to the industrial revival of Europe, he nevertheless signed the treaty. He held that not only the above points were objectionable, but that the treaty would need revision in respect to territorial settlements and certain punitive provisions. It would, according to his view, require amendment before it could be turned from a statesmen's peace into a peace of the people.

In regard to the Allied policy in Russia General Smuts made the following observations: "Russia can only be saved internally by Russians themselves, working on Russian methods and

ideas. . . . Our military forces, our lavish contributions of tanks, and other war material may temporarily bolster up the one side, but the real magnitude of the problem is quite beyond such expedients. . . . It may well be that the only ultimate hope for Russia is a sobered, purified Soviet system, and that may be far better than the Czarism to which our present policy seems inevitably tending." This point of view was that toward which the Allied governments were as a matter of fact tending at the close of the year, but at the time that he expressed it, and for many months thereafter such sentiments were condemned by a large and influential portion of the Allied press as pro-Bolshevist. In the United States, indeed throughout the entire year many persons ran the risk of prosecution for the expression of opinions not differing essentially from those expressed by General Smuts. See articles WAR FINANCE; FINANCIAL REVIEW; paragraphs on Finance under FRANCE, GERMANY, GREAT BRITAIN, etc.; INDUSTRIAL RECONSTRUCTION; and paragraphs pertaining to economic conditions and reconstruction under the respective countries.

THE TREATIES

TREATY WITH GERMANY

In the following sections are given the text of the covenant in full, the official summary of the treaty with Germany (the text being that printed by the *London Times*, and the *Political Science Quarterly*), and brief resums of the treaties with Austria and Bulgaria.

The treaty with Germany was signed at Versailles, June 28th, by the representatives of the Allies and ratified by the German National Assembly, July 10. It was accepted by the British government, July 31, signed by the Italian government October 7th; by the French, October 13, and by the Japanese, October 27th. It was rejected by the United States Senate, November 19th.

The Preamble, which recites shortly the origin of the War and the application of the Germans for an Armistice, enumerates the High Contracting Parties, represented by the five Great Powers—the United States of America, the British Empire, France, Italy, and Japan, together with Belgium, Bolivia, Brazil, China, Cuba, Ecuador, Greece, Guatemala, Haiti, the Hedjaz, Honduras, Liberia, Nicaragua, Panama, Peru, Poland, Portugal, Rumania, Serbia, Siam, Czechoslovakia, and Uruguay, on the one hand, and Germany on the other. The Plenipotentiaries representing these Powers are enumerated, "who, having communicated their full powers found in good and due form, have agreed as follows. From the coming into force of the present Treaty, the state of War will terminate. From that moment, and subject to the provisions of this Treaty, official relations with Germany and with each of the German States will be resumed by the Allied and Associated Powers."

SECTION I THE COVENANT

PREAMBLE In order to promote international cooperation and to secure international peace and security by the acceptance of obligations not to resort to war; by the prescription of open, just, and honorable relations between nations; by the firm establishment of the understandings of international law as the actual rule of conduct among Governments; and by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organized peoples with one another, the Powers signatory to

this Covenant adopt this Constitution of the League of Nations.

MACHINERY OF THE LEAGUE. Article 1 The action of the high contracting parties under the terms of this covenant shall be effected through the instrumentality of meetings of a body of delegates representing the high contracting parties, of meetings at more frequent intervals of an Executive Council, and of a permanent International Secretariat to be established at the seat of the League.

Article 2. Meetings of the Body of Delegates shall be held at stated intervals and from time to time as occasion may require for the purpose of dealing with matters within the sphere of action of the League. Meetings of the Body of Delegates shall be held at the seat of the League or at such other places as may be found convenient, and shall consist of representatives of the high contracting parties. Each of the high contracting parties shall have one vote, but may have not more than three representatives.

Article 3. The Executive Council shall consist of representatives of the United States of America, the British Empire, France, Italy, and Japan, together with representatives of four other States members of the League. The selection of these four States shall be made by the Body of Delegates on such principles and in such manner as they think fit. Pending the appointment of these representatives of the other States, representatives of the other States shall be members of the Executive Council. Meetings of the Council shall be held from time to time as occasion may require, and at least once a year, at whatever place may be decided on, or failing any such decision at the seat of the League, and any matter within the sphere of action of the League or affecting the peace of the world may be dealt with at such meetings. Invitations shall be sent to any Power to attend a meeting of the Council at which matters directly affecting its interests are to be discussed, and no decision taken at any meeting will be binding on such Power unless so invited.

Article 4. All matters of procedure at meetings of the body of delegates or the executive council, including the appointment of committees to investigate particular matters, shall be regulated by the body of delegates or the executive council, and may be decided by a majority of the States represented at the meeting. The first meeting of the body of delegates and of the executive council shall be summoned by the President of the United States of America.

Article 5. The permanent secretariat of the League shall be established at ———, which shall constitute the seat of the League. The secretariat shall comprise such secretaries and staff as may be required under the general direction and control of a secretary-general of the League, who shall be chosen by the executive council. The secretaries at ——— shall be appointed by the secretary-general, subject to confirmation by the executive council. The secretary-general shall act in that capacity at all meetings of the body of delegates or of the executive council. The expenses of the secretariat shall be borne by the States members of the League in accordance with the apportionment of the expenses of the International Bureau of the Universal Postal Union.

Article 6. Representatives of the high contracting parties and officials of the League when engaged on the business of the League shall enjoy diplomatic privileges and immunities, and the buildings occupied by the League or its officials or by representatives attending its meetings shall enjoy the benefits of extraterritoriality.

ADMISSION OF NEW MEMBERS. Article 7. Admission to the League of States not signatories to the Covenant and not named in the protocol hereto as States to be invited to adhere to the covenant requires the assent of not less than two-thirds of the States represented in the body of delegates, and shall be limited to fully self-governing countries, including Dominions and Colonies. No State shall be admitted to the League unless it is able to give effective guarantees of its sincere intention to observe its international obligations, and unless it shall conform to such principles as may be prescribed by the League in regard to its naval and military forces and armaments.

LIMITATION OF ARMAMENTS. Article 8. The high contracting parties recognize the principle that the maintenance of peace will require the reduction of national armaments to the lowest point consistent with national safety, and the enforcement by common action of international obligations, having special regard to the geographical situation and circumstances of each State, and the executive council shall formulate plans for effecting such reduction. The executive council shall also determine for the consideration and action of the several Governments what military equipment and armament is fair and reasonable in propor-

¹ The bill to ratify it received the royal assent on that date, but signature was delayed till October 10 in order to receive ratifications from the overseas dominions.

By Permission of The Macmillan Company

CENTRAL EUROPE BEFORE THE WORLD WAR

tion to the scale of forces laid down in the programme of disarmament, and these limits, when adopted, shall not be exceeded without the permission of the executive council. The high contracting parties agree that the manufacture by private enterprise of munitions and implements of war lends itself to grave objections, and direct the executive council to advise how the evil effects attendant upon such manufacture can be prevented, due regard being had to the necessities of those countries which are not able to manufacture for themselves the munitions and implements of war necessary for their safety. The high contracting parties undertake in no way to conceal from each other the conditions of such of their industries as are capable of being adapted to warlike purposes or the scale of their armaments, and agree that there shall be full and frank interchange of information as to their military and naval programmes.

Article 9 A permanent Commission shall be constituted to advise the League on the execution of the provisions of Article 8 and on military and naval questions generally.

Article 10. The high contracting parties undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all States members of the League. In case of any such aggression or in case of any threat or danger of such aggression the Executive Council shall advise upon the means by which this obligation shall be fulfilled.

PEACE SAFEGUARDS. Article 11 Any war or threat of war, whether immediately affecting any of the high contracting parties or not, is hereby declared a matter of concern to the League, and the high contracting parties reserve the right to take any action that may be deemed wise and effectual to safeguard the peace of nations. It is hereby also declared and agreed to be the friendly right of each of the high contracting parties to draw the attention of the Body of Delegates or of the Executive Council to any circumstances affecting international intercourse which threaten to disturb international peace or the good understanding between nations upon which peace depends.

Article 12 The high contracting parties agree that, should disputes arise between them which cannot be adjusted by the ordinary processes of diplomacy, they will in no case resort to war without previously submitting the questions and matters involved either to arbitration or to inquiry by the Executive Council, and until three months after the award by the arbitrators or a recommendation by the Executive Council, and that they will not even then resort to war as against a member of the League which complies with the award of the arbitrators or the recommendation of the Executive Council. In any case under this article the award of the arbitrators shall be made within a reasonable time, and the recommendation of the Executive Council shall be made within six months after the submission of the dispute.

Article 13. The high contracting parties agree that, whenever any dispute or difficulty shall arise between them which they recognize to be suitable for submission to arbitration and which cannot be satisfactorily settled by diplomacy, they will submit the whole subject-matter to arbitration. For this purpose the Court of Arbitration to which the case is referred shall be the Court agreed on by the parties or stipulated in any convention existing between them. The high contracting parties agree that they will carry out in full good faith any award that may be rendered. In the event of any failure to carry out the award the Executive Council shall propose what steps can best be taken to give effect thereto.

COURT OF INTERNATIONAL JUSTICE. Article 14 The Executive Council shall formulate plans for the establishment of a permanent Court of International Justice, and this Court shall, when established, be competent to hear and determine any matter which the parties recognize as suitable for submission to it for arbitration under the foregoing article.

Article 15. If there should arise between States members of the League any dispute likely to lead to a rupture which is not submitted to arbitration as above, the high contracting parties agree that they will refer the matter to the Executive Council. Either party to the dispute may give notice of the existence of the dispute to the Secretary-General, who will make all necessary arrangements for a full investigation and consideration thereof. For this purpose the parties agree to communicate to the Secretary-General as promptly as possible statements of their case with all the relevant facts and papers, and the Executive Council may forthwith direct the publication thereof. Where the efforts of the Council lead to the settlement of the dispute a statement shall be published indicating the nature of the dispute and the terms of settle-

ment, together with such explanations as may be appropriate. If the dispute has not been settled a report by the Council shall be published setting forth with all necessary facts and explanations the recommendation which the Council think just and proper for the settlement of the dispute. If the report is unanimously agreed to by the members of the Council other than the parties to the dispute the high contracting parties agree that they will not go to war with any party which complies with the recommendation, and that if any party shall refuse so to comply the Council shall propose the measures necessary to give effect to the recommendations. If no such unanimous report can be made, it shall be the duty of the majority, and the privilege of the minority, to issue statements indicating what they believe to be the facts and containing the recommendations which they consider to be just and proper. The Executive Council may in any case under this Article refer the dispute to the Body of Delegates. The dispute shall be so referred at the request of either party to the dispute, provided that such request must be made within fourteen days after the submission of the dispute. In any case referred to the Body of Delegates all the provisions of this Article and of Article 12 relating to the action and powers of the Executive Council shall apply to the action and powers of the Body of Delegates.

PUNISHMENT OF GUILTY STATES. Article 16. Should any of the high contracting parties break or disregard its covenants under Article 12 it shall thereby *ipso facto* be deemed to have committed an act of war against all the other members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking State, and the prevention of all financial, commercial, or personal intercourse between the nationals of the covenant-breaking State and the nationals of any other State, whether a member of the League or not. It shall be the duty of the Executive Council in such case to recommend what effective military or naval force the members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League. The high contracting parties agree further that they will mutually support one another in the financial and economic measures which are taken under this Article in order to minimize the loss and inconvenience resulting from the above measures, and that they will mutually support one another in resisting any special measures aimed at one of their number by the covenant-breaking State, and that they will afford passage through their territory to the forces of any of the high contracting parties who are co-operating to protect the covenants of the League.

Article 17. In the event of disputes between one State member of the League, and another State which is not a member of the League, or between States not members of the League, the high contracting parties agree that the State or States not members of the League shall be invited to accept the obligations of membership in the League for the purposes of such dispute upon such conditions as the Executive Council may deem just, and upon acceptance of any such invitation the above provisions shall be applied with such modifications as may be deemed necessary by the League. Upon such invitation being given, the Executive Council shall immediately institute an inquiry into the circumstances and merits of the dispute and recommend such action as may seem best and most effectual in the circumstances. In the event of a Power so invited refusing to accept the obligations of membership in the League for the purposes of such dispute, and taking any action against a State member of the League which in the case of a State member of the League would constitute a breach of Article 12, the provisions of Article 16 shall be applicable as against the State taking such action. If both parties to the dispute when so invited refuse to accept the obligations of membership in the League for the purposes of such dispute, the Executive Council may take such action and make such recommendations as will prevent hostilities and will result in the settlement of the dispute.

Article 18. The high contracting parties agree that the League shall be entrusted with the general supervision of the trade in arms and ammunition with the countries in which the control of this traffic is necessary in the common interest.

THE EX-GERMAN COLONIES AND TURKEY. Article 19. To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the States which formerly governed them, and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions

of the modern world, there should be applied the principle that the wellbeing and development of such peoples form a sacred trust of civilization and that securities for the performance of this trust should be embodied in the constitution of the League. The best method of giving practical effect to this principle is that the tutelage of such peoples should be entrusted to advanced nations who, by reason of their resources, their experience, or their geographical position, can best undertake this responsibility, and that this tutelage should be exercised by them as Mandatories on behalf of the League. The character of the Mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic conditions and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized, subject to the rendering of administrative advice and assistance by a Mandatory Power until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory Power. Other peoples, especially those of Central Africa, are at such a stage that the Mandatory must be responsible for the administration of the territory subject to conditions which will guarantee freedom of conscience or religion, subject only to the maintenance of public order and morals, the prohibition of abuses such as the slave trade, the arms traffic and the liquor traffic, and the prevention of the establishment of fortifications or military and naval bases and of military training of the natives for other than police purposes and the defense of territory, and will also secure equal opportunities for the trade and commerce of other members of the League.

There are territories, such as South-west Africa and certain of the South Pacific Islands, which, owing to the sparseness of their population or their small size or their remoteness from the centres of civilization or their geographical contiguity to the Mandatory State and other circumstances, can be best administered under the laws of the Mandatory State as integral portions thereof subject to the safeguards above mentioned in the interests of the indigenous population. In every case of Mandate the Mandatory State shall render to the League an annual report in reference to the territory committed to its charge. The degree of authority, control, or administration to be exercised by the Mandatory State shall, if not previously agreed upon by the high contracting parties, in each case be explicitly defined by the Executive Council in a special Act or Charter. The high contracting parties further agree to establish at the seat of the League a Mandatory Commission to receive and examine the annual reports of the Mandatory Powers and to assist the League in ensuring the observance of the terms of all Mandates.

CONDITIONS OF LABOR AND COMMERCE Article 20. The high contracting parties will endeavor to secure and maintain fair and humane conditions of labor for men, women, and children both in their own countries and in all countries to which their commercial and industrial relations extend, and to that end agree to establish as part of the organization of the League a permanent Bureau of Labor.

Article 21. The high contracting parties agree that provision shall be made through the instrumentality of the League to secure and maintain freedom of transit and equitable treatment for the commerce of all States members of the League, having in mind among other things special arrangements with regard to the necessities of the regions devastated during the war of 1914-1918.

Article 22. The high contracting parties agree to place under the control of the League all international bureaux already established by general Treaties if the parties to such Treaties consent; furthermore, they agree that all such international bureaux to be constituted in future shall be placed under the control of the League.

TREATIES TO BE PUBLISHED Article 23. The high contracting parties agree that every treaty or international engagement entered into hereafter by any State member of the League shall be forthwith registered with the Secretary-General and as soon as possible published by him, and that no such treaty or international engagement shall be binding until so registered.

Article 24. It shall be the right of the Body of Delegates from time to time to advise the reconsideration by States members of the League of Treaties which have become inapplicable and of international conditions of which the continuance may endanger the peace of the world.

Article 25. The high contracting parties severally agree that the present Covenant is accepted as abrogat-

ing all obligations *inter se* which are inconsistent with the terms thereof, and solemnly engage that they will not hereafter enter into any engagements inconsistent with the terms thereof. In case any of the Powers signatory hereto or subsequently admitted to the League shall, before becoming a party to this Covenant, have undertaken any obligations which are inconsistent with the terms of this Covenant, it shall be the duty of such Power to take immediate steps to procure a release from such obligations.

Article 26. Amendments to this Covenant will take effect when ratified by the States whose representatives compose the Executive Council and by three-fourths of the States whose representatives compose the Body of the Delegates.

SECTION II

THE BOUNDARIES OF GERMANY

The boundaries of Germany are described in two articles, one dealing with Germany proper and the other with East Prussia. The boundary lines between the new State of Poland and Germany and East Prussia respectively, and the new boundary line between East Prussia and Lithuania, which are shown approximately on the attached map, are described in detail in so far as they are not left to be settled by Boundary Commissions on the spot. The boundary with Belgium follows the line described in the later Section dealing with Belgium. The frontier with Luxembourg and with Switzerland is that of August, 1914. The frontier with France is that of the 18th July, 1870, with a reservation regarding the Saar. The frontier with Austria is the same as that of the 3rd August, 1914, up to the point where that of the new State of Techecho-Slovakia begins. The frontier of Techecho-Slovakia follows the old frontier between Germany and Austria up to the point where the new State of Poland begins. The boundary between Germany and Denmark and a portion of the boundary between East Prussia and Poland remain to be decided by the result of a plebiscite.

SECTION III

POLITICAL CLAUSES: EUROPE

BELGIUM. Germany is to consent to the abrogation of the Treaties of 1839 (by which Belgium was established as a neutral State and her frontiers, &c., fixed), and to agree in advance to any Convention with which the Allies may determine to replace them. Germany is to recognize the full sovereignty of Belgium over the contested territory of Moresnet and over part of Prussian Moresnet; and is to renounce in favor of Belgium all rights over Eupen and Malmedy, the inhabitants of which are to be entitled within six months to protest against this change either in whole or in part, the final decision to be reserved to the League of Nations. A Commission is to settle the details of the frontier, and various regulations for individual changes of nationality are laid down. Territories acquired by Belgium will be free of all obligations.

LUXEMBURG. Germany renounces her various treaties and conventions with the Grand Duchy of Luxembourg, recognizes that it ceased to be part of the German Zollverein from the 1st January last, renounces all rights of exploitation of the railways, adheres to the abrogation of its neutrality, and accepts in advance any international agreements as to it reached by the Allied and Associated Powers.

THE LEFT BANK OF THE RHINE. As subsequently provided in the Military Section, Germany must not maintain or construct any fortifications less than fifty kilometers to the east of the Rhine. In the above area Germany may maintain no armed forces, either permanent or temporary, nor hold any maneuvers, nor maintain any works for facilitating mobilization. If the provisions of this Article are violated, she shall be regarded as committing a hostile act against the signatories of the Treaty, and as intending to disturb the world's peace. By virtue of the Treaty she must respond to any request for an explanation which the Council of the League of Nations may address to her.

THE SAAR. In compensation for the destruction of coal mines in Northern France and as payment on account of reparation, Germany cedes to France full ownership of the coal mines of the Saar Basin, with their subsidiaries, accessories, and facilities. Their value will be estimated by the Reparation Commission and credited against that account. The French rights will be governed by German law in force at the Armistice, excepting war legislation, France replacing the present owners, whom Germany undertakes to indemnify. France will continue to furnish the present proportion

al for local needs, and contribute in just proportion to local taxes. The basin extends from the frontier of Lorraine as re-annexed to France north as far as St. Wendell, including on the west the valley of the Saar as far as Saarlöbach and on the east the town of Homburg.

In order to secure the rights and welfare of the population and guarantee to France entire freedom in working the mines, the territory will be governed by a Commission appointed by the League of Nations, and consisting of five members, one French, one a native inhabitant of the Saar, and three representing three different countries other than France and Germany. The League will appoint a member of the Commission as Chairman, to act as executive of the Commission. The Commission will have all powers of government formerly belonging to the German Empire, Prussia, and Bavaria; will administer the railroads and other public services, and have full power to interpret the Treaty clauses. The local courts will continue, but subject to the Commission. Existing German legislation will remain the basis of the law, but the Commission may make modifications after consulting a local representative assembly which it will organize. It will have the taxing power, but for local purposes only; new taxes must be approved by this assembly. Labour Legislation will consider the wishes of the local labour organizations and the labour program of the League. French and other labour may be freely utilized, the former being free to belong to French unions.

There will be no military service, but only a local gendarmerie to preserve order. The people will preserve their local assemblies, religious liberties, schools, and language; but may vote only for local assemblies. They will keep their present nationality, except so far as individuals may change it. Those wishing to leave will have every facility with respect to their property. The territory will form part of the French customs system, with no export tax on coal and metallurgical products going to Germany, nor on German products for the Basin, and for five years no import duties on products of the Basin going to Germany or German products coming into the Basin for local consumption. French money may circulate without restriction.

After fifteen years a plebiscite will be held by communes to ascertain the desires of the population as to continuance of the existing régime under the League of Nations, union with France, or union with Germany. The right to vote will belong to all inhabitants over twenty resident therein at the signature. On the opinion thus expressed the League will decide the ultimate sovereignty. In any portion restored to Germany the German Government must buy out the French mines at an appraised valuation; if the price is not paid within six months thereafter, this portion passes finally to France. If Germany buys back the mines, the League will determine how much of the coal shall go to France.

ALSACE-LORRAINE After recognition of the moral obligation to repair the wrong done in 1871 by Germany to France, and the people of Alsace-Lorraine, the territories ceded to Germany by the Treaty of Frankfurt are restored to France with their frontiers as before 1871, to date from the signing of the Armistice, and to be free of all public debts.

Citizenship is regulated by detailed provisions distinguishing those who are immediately restored to full French citizenship, those who have to make a formal application therefor, and those for whom naturalization is open after three years. The last-named class includes German residents in Alsace-Lorraine, as distinguished from those who acquire the position of Alsace-Lorrainers as defined in the Treaty.

All public property and all private property of German ex-sovereigns passes to France without payment or credit. France is substituted for Germany as regards ownership of the railroads and rights over concessions of tramways. The Rhine bridges pass to France, with the obligation for their upkeep.

For five years manufactured products of Alsace-Lorraine will be admitted to Germany free of duty to a total amount not exceeding in any year the average of the three years preceding the war, and textile materials may be imported from Germany to Alsace-Lorraine and reexported free of duty. Contracts for electric power from the Right Bank must be continued for ten years.

For seven years, with possible extension to ten, the ports of Kehl and Strasbourg shall be administered as a single unit by a French administrator appointed and supervised by the Central Rhine Commission. Property rights will be safeguarded in both ports, and equality of treatment as respects traffic assured the nationals, vessels, and goods of any country.

Contracts between Alsace-Lorrainers and Germans are maintained save for France's right to annul on

grounds of public interest. Judgments of courts hold in certain classes of cases, while in others a judicial *consequatur* is first required. Political condemnations during the war are null and void, and the obligation to repay war fines is established as in other parts of Allied territory.

Various clauses adjust the general provisions of the Treaty to the special conditions of Alsace-Lorraine, certain matters of execution being left to conventions to be made between France and Germany.

GERMAN AUSTRIA. The entire independence of German Austria is recognized by Germany.

CZECHO-SLOVAKIA. Germany recognizes the entire independence of the Czecho-Slovak State, including the autonomous territory of the Ruthenians, south of the Carpathians, and accepts the frontiers of this State, as they may be determined, which in the case of the German frontier shall follow the old frontier of Bohemia in 1914. The usual stipulations as to acquisition and change of nationality follow.

POLAND. Germany cedes to Poland the greater part of Upper Silesia, Posen, and the province of West Prussia on the left bank of the Vistula. A field boundary commission of seven, five representing the Allied and Associated Powers and one each representing Poland and Germany, shall be constituted within fifteen days of the Peace to delimit this boundary. Such special provisions as are necessary to protect racial or religious minorities shall be laid down in a subsequent treaty between the Allied and Associated Powers and Poland.

EAST PRUSSIA. The southern and the eastern frontier of East Prussia as facing Poland is to be fixed by plebiscites, the first in the Regency of Allenstein between the southern frontier of East Prussia and the northern frontier of Regierungsbezirk Allenstein from where it meets the boundary between East and West Prussia to its junction with the boundary between the circles of Oletzko and Angerburg, thence the northern boundary of Oletzko to its junction with the present frontier, and the second in the area comprising the circles of Stuhm and Rosenberg and the parts of the circles of Marienburg and Marienwerder east of the Vistula.

In each case German troops and authorities will move out within fifteen days of the Peace and the territories be placed under an International Commission of five members appointed by the five Allied and Associated Powers, with the particular duty of arranging for a free, fair, and secret vote. The Commission will report the results of the plebiscites to the five Powers, with a recommendation for the boundary, and will terminate its work as soon as the boundary has been laid down and the new authorities set up.

The five Allied and Associated Powers will draw up regulations assuring East Prussia full and equitable access to the use of the Vistula. A subsequent Convention, of which the terms will be fixed by the five Allied and Associated Powers, will be entered into between Poland, Germany, and Danzig, to assure suitable railroad communication across German territory on the right bank of the Vistula between Poland and Danzig, while Poland shall grant free passage from East Prussia to Germany.

The northeastern corner of East Prussia about Memel is to be ceded by Germany to the Associated Powers, the former agreeing to accept the settlement made, especially as regards the nationality of the inhabitants.

DANZIG. Danzig and the district immediately about it is to be constituted into the "Free City of Danzig," under the guarantee of the League of Nations. A High Commissioner appointed by the League and resident at Danzig shall draw up a constitution in agreement with the duly appointed representatives of the city, and shall deal in the first instance with all differences arising between the city and Poland. The actual boundaries of the city shall be delimited by a Commission appointed within six months from the Peace, and to include three representatives chosen by the Allied and Associated Powers and one each by Germany and Poland.

A Convention, the terms of which shall be fixed by the Five Allied and Associated Powers, shall be concluded between Poland and Danzig, which shall include Danzig within the Polish Customs frontiers, though with a free area in the port; insure to Poland the use of all the city's waterways, docks, and other port facilities, the control and administration of the Vistula and the whole through railway system within the city, and postal, telegraphic, and telephonic communication between Poland and Danzig, provide against discrimination against Poles within the city, and place its foreign relations and the diplomatic protection of its citizens abroad in charge of Poland.

DENMARK. The frontier between Germany and Den-

mark is to be fixed in accordance with the wishes of the population, a vote being taken in Northern Schleswig as a whole and in portions of Central Schleswig by communes. Ten days from the Peace German troops and authorities must evacuate the region north of the line running from the mouth of the Schlei, south of Kappel, Schleswig, and Friedrichstadt along the Eider to the North Sea south of Tonning; and Workmen's and Soldiers' Councils in the zone must be dissolved. During the voting the zone will be under the charge of an International Commission of five members, of whom the Norwegian and Swedish Governments will be invited to choose two. The Commission will temporarily have general powers of administration. After the result of the voting has been declared, the Danish Government may occupy those territories which have voted for Denmark, and Germany shall renounce sovereign rights in these territories. All the inhabitants will then acquire Danish nationality, with certain exceptions. Provisions are made for individual change of nationality under certain conditions.

HELGOLAND. The fortifications, military establishments, and harbors of the Islands of Helgoland and Dune are to be destroyed, under the supervision of the Allies, by German labor and at Germany's expense. They are not to be reconstructed, nor are any similar works to be constructed in the future.

RUSSIA. Germany is to recognize and respect the full independence of all the territories which formed part of the former Russian Empire. Germany is to accept definitely the annulment of the Brest-Litovsk Treaty and of all Treaties or Agreements of all kinds concluded by Germany since the Revolution of November, 1917, with all Governments or political groups on territory of the former Russian Empire.

The Allies reserve all rights on the part of Russia for restitution and satisfaction to be obtained from Germany on the principles of the present Treaty.

SECTION IV

POLITICAL CLAUSES OUTSIDE EUROPE

GERMAN RIGHTS OUTSIDE EUROPE. Outside Europe Germany renounces all rights, titles, and privileges as to her own or her allies' territories to all the Allied and Associated Powers, and undertakes to accept whatever measures are taken by the five Allied Powers in relation thereto.

COLONIES AND OVERSEAS POSSESSIONS. Germany renounces in favor of the Allied and Associated Powers her overseas possessions with all rights and titles therein. All movable and immovable property belonging to the German Empire or to any German State shall pass to the Government exercising authority therein. These Governments may make whatever provisions seem suitable for the repatriation of German nationals, and as to the conditions on which German subjects of European origin shall reside, hold property, or carry on business. Germany undertakes to pay reparation for damage suffered by French nationals in the Cameroons or its frontier zone through the acts of German civil and military authorities and of individual Germans from 1st January, 1900, to 1st August, 1914. Germany renounces all rights under the Convention of 4th November, 1811, and 28 September, 1912, and undertakes to pay to France in accordance with an estimate presented and approved by the Reparation Commission all deposits, credits, advances, &c., thereby secured. Germany undertakes to accept and observe any provisions by the Allied and Associated Powers as to the trade in arms and spirits in Africa, as well as to the General Act of Berlin, 1885, and the General Act of Brussels of 1890. Diplomatic protection to the inhabitants of former German colonies is to be given by the Governments exercising authority.

CHINA. Germany renounces in favor of China all privileges and indemnities resulting from the Boxer Protocol of 1901 and all buildings, wharves, barracks, forts, munitions of war, ships, wireless plants, and other public property, except diplomatic or consular establishments, in the German concessions of Tientsin and Hankow, and in other Chinese territory except Kiaochow, and agrees to return to China at her own expense all the astronomical instruments seized in 1900 and 1901. China will, however, take no measures for disposal of German property in the Legation quarter at Peking without the consent of the Powers signatory to the Boxer Protocol.

Germany accepts the abrogation of the concessions at Hankow and Tientsin, China agreeing to open them to international use. Germany renounces all claims against China or any Allied and Associated Government for the internment or repatriation of her citizens in China, and for the seizure or liquidation of German

interests there since 14th August, 1917. She renounces in favor of Great Britain her State property in the British concession at Canton, and of France and China jointly of the property of the German school in the French concession at Shanghai.

SIAM. Germany recognizes that all agreements between herself and Siam, including the right of extra-territoriality, ceased the 22nd July, 1917. All German public property except consular and diplomatic premises passes without compensation to Siam. German private property to be dealt with in accordance with the Economic clauses. Germany waives all claims against Siam for the seizure and condemnation of her ships, liquidation of her property, or internment of her nationals.

LIBERIA. Germany renounces all rights under the international arrangements of 1911-1912 regarding Liberia, more particularly the right to nominate a receiver of the customs, and disinterests herself in any further negotiations for the rehabilitation of Liberia. She regards as abrogated all commercial treaties and agreements between herself and Liberia, and recognizes Liberia's right to determine the status and condition of the re-establishment of Germans in Liberia.

MOROCCO. Germany renounces all her rights, titles, and privileges under the Act of Algeiras and the Franco-German Agreements of 1909 and 1911, and under all Treaties and arrangements with the Sherifian Empire. She undertakes not to intervene in any negotiations as to Morocco between France and other powers, accepts all the consequences of the French Protectorate there and renounces the capitulations. The Sherifian Government shall have complete liberty of action in regard to German nationals, and all German-protected persons shall be subject to the common law. All movable and immovable German property, including mining rights, may be sold at public auction, the proceeds to be paid to the Sherifian Government and deducted from the reparation account. Germany is also required to relinquish her interests in the State Bank of Morocco. All Moroccan goods entering Germany shall have the same privilege as French goods.

EGYPT. Germany recognizes the British Protectorate over Egypt declared on the 18th December, 1914, and renounces as from the 4th August, 1914, the capitulations and all the Treaties, Agreements, &c., concluded by her with Egypt. She undertakes not to intervene in any negotiations about Egypt between Great Britain and other Powers. There are provisions for jurisdiction over German nationals and property, and for German consent to any changes which may be made in relation to the Commission of Public Debt. Germany consents to the transfer to Great Britain of the powers given to the late Sultan of Turkey for securing the free navigation of the Suez Canal. Arrangements for property belonging to German nationals in Egypt are made similar to those in the case of Morocco and other countries. Anglo-Egyptian goods entering Germany shall enjoy the same treatment as British goods.

TURKEY AND BULGARIA. Germany accepts all arrangements which the Allied and Associated Powers make with Turkey and Bulgaria with reference to any rights, privileges, or interests claimed in those countries by Germany or her nationals and not dealt with elsewhere.

SHANTUNG. Germany cedes to Japan all rights, titles and privileges, notably as to Kiaochow, and the railroads, mines and cables acquired by her Treaty with China of the 6th March, 1898, and by other agreements as to Shantung. All German rights to the railroad from Tsingtao to Tsinaufu, including all facilities and mining rights and rights of exploitation, pass equally to Japan, and the cables from Tsingtao to Shanghai and Cheefoo, the cables free of all charges. All German State property, movable and immovable, in Kiaochow is acquired by Japan free of all charges.

SECTION V

MILITARY, NAVAL, AND AIR CLAUSES

"In order to render possible the initiation of a general limitation of the armaments of all nations, Germany undertakes directly to observe the military, naval and air clauses which follow."

MILITARY. The military terms provide for the demobilization of the German Armies and the imposition of other military restrictions, within two months of the signing of the Treaty (as the first step towards international disarmament). All compulsory military service is to be abolished in German territory, and recruiting regulations on a voluntary basis are to be incorporated into the German military laws, providing for the enlistment of non-commissioned officers and men for a period of not less than twelve consecutive years, and

stipulating that officers shall serve for twenty-five years, and shall not be retired until the age of forty-five. No reserve of officers with war service will be permitted. The total number of German effectives is fixed at one hundred thousand, including not more than four thousand officers, and it is provided that there shall be no other military forces raised outside this figure. Increase in the number of customs, forestry officials or police, or the military training of these services, is especially prohibited.

The function of the German Army is to keep internal order and control of frontiers. The High Command is to confine itself to administrative duties, and it will not be allowed to retain a General Staff. Civilian personnel at the Ministry of War and similar institutions is to be reduced to one-tenth of that in 1913. There will be not more than seven Infantry and three Cavalry Divisions, and not more than two Corps Staffs. Surplus war academies, and schools for officers, cadets, &c., are to be suppressed, and the number of students admitted to the schools retained for the recruitment of officers is to be limited, to the vacancies occurring in the establishments provided. The production of armaments, munitions, and material of war in Germany is limited to a schedule, based on the amount considered necessary for an army on the scale decided upon. No reserves may be formed and all existing armaments, guns and stores above the limit fixed must be handed over to the Allies for disposal. No poisonous gas or liquid fire shall be manufactured or imported, nor any tanks nor armored cars. The Germans are obliged to notify to the Allies for approval the names and situation of all factories manufacturing munitions, together with particulars of their output. The German Government arsenals are to be suppressed and their personnel dismissed. Munitions for use in fortified works will be limited to 1,500 rounds apiece for guns of 10.5 cm calibre and under, and 500 rounds for guns of a higher calibre. Germany is prohibited from manufacturing armaments and munitions for foreign countries, and from importing them from abroad. Germany must not maintain or construct any fortifications situated on German territory less than 50 kilometres east of the Rhine, and in the above area no armed forces either permanent or temporary may be maintained. The *status quo* is to be preserved in respect of the fortifications on the original southern and eastern frontiers of the German Empire. No military manœuvres may be held nor any permanent works kept for the purposes of helping mobilization. The demobilization of fortifications must take place within three months.

NAVAL. The Naval terms provide that within two months the German naval forces in commission must not exceed six battleships of the "Deutschland" or "Lothringen" type, six light cruisers, twelve destroyers, and twelve torpedo boats, or an equal number of ships constructed to replace them. No submarines are to be included, and all other warships are to be placed in reserve or devoted to commercial purposes. Germany may keep in commission a fixed number of mine-sweeping vessels until the mines within certain specified areas in the North Sea and Baltic have been swept up. After the expiration of two months the total exclusive personnel of the navy must not exceed 15,000, including a maximum of 1500 officers and warrant officers. All German surface warships interned in Allied or neutral ports are to be finally surrendered. Within two months certain additional warships enumerated in the Treaty and now in German ports will be surrendered at Allied ports. The German Government must undertake the breaking up of all German surface warships under construction. Auxiliary cruisers, &c., are to be disarmed and treated as merchant ships. Within one month all German submarines, salvage vessels, and docks for submarines capable of proceeding under their own power or of being towed must have been handed over at Allied ports.

The remainder and those under construction must be broken up by Germany within three months.

Material arising from the breaking up of German warships may not be used except for industrial purposes, and may not be sold to foreign countries. Except under specified conditions for replacement, Germany is forbidden to construct or acquire any warships, and the construction or acquisition of any submarines whatever is prohibited. Vessels of war are only to have a fixed allowance of arms, munitions, and war material. All excess of arms, munitions, and war material is to be surrendered, and no stocks or reserves are allowed.

The personnel of the German navy must be recruited entirely by voluntary engagements for a minimum period of twenty-five consecutive years for officers and warrant officers, and twelve consecutive years for petty officers and men, under various restrictions.

In order to ensure free passage into the Baltic, Germany is not to erect any fortifications in certain specified areas, nor to instal any guns commanding maritime routes between the North Sea and the Baltic. Existing fortifications within those areas are to be demolished and guns removed. Other fortified works within 50 kilometres of the German coast or on German islands are to remain, as being of a defensive nature, but no new fortifications may be constructed and the armaments may not be increased. The maximum stocks of ammunition allowed for such defences are 1500 rounds per piece for 4.3-inch guns and under, and 500 rounds per piece for guns exceeding that calibre.

The German wireless stations at Nauen, Hanover and Berlin are not to be used for naval, military, or political messages without the assent of the Allied and Associated Governments during three months, but only for commercial purposes, under supervision. During the same period Germany is not to build any more high-power wireless stations.

Germany will be allowed to repair German submarine cables which have been cut but are not being utilized by the Allied Powers, and also portions of cables which, after having been cut, have been removed, or are at any rate not being utilized by any one of the Allied and Associated Powers. In such cases the cables, or portions of cables, removed or utilized remain the property of the Allied and Associated Powers, and accordingly fourteen cables or parts of cables are specified which will not be restored to Germany.

AIR. The Air clauses provide that the armed forces of Germany must not include any military or naval forces. Germany is, however, to be allowed to maintain a maximum of 100 unarmed seaplanes up to the 1st October, 1919, to be exclusively employed in searching for submarine mines. The entire personnel of the air forces in Germany is to be demobilized within two months, except for a total of 1,000 men, including officers, which may be retained up to October.

The aircraft of the Allied and Associated Powers are to enjoy full liberty of passage and landing over and in the territory and territorial waters of Germany until the 1st January, 1923, unless prior to that date Germany is admitted to the League of Nations or is permitted to adhere to the International Air Convention.

The manufacture of aircraft and parts of aircraft is forbidden throughout Germany for six months.

All military and naval aircraft (including dirigibles) and aeronautical material are to be delivered to the Allied and Associated Governments within three months, except for the 100 seaplanes already specified.

GENERAL. General articles provide for the modification of German laws in conformity with the preceding clauses.

All the clauses contained in the Treaty are to be executed by Germany under the control of Inter-Allied Commissions, to be specially appointed by the Allied and Associated Governments, for which the German Government is bound to furnish all necessary facilities and expenses of upkeep. The duties of the Military, Naval, and Aeronautical Commissions of Control are laid down in detail.

SECTION VI

PRISONERS OF WAR

The repatriation of German prisoners and interned civilians is to be carried out by a Commission composed of representatives of the Allies and the German Government, together with local sub-commissions. German prisoners of war and interned civilians are to be returned without delay by the German authorities at their own cost. Those under sentence for offences against discipline committed before the 1st May, 1919, are to be repatriated without regard to the completion of their sentence, but this does not apply in the case of offences other than those against discipline. The Allies have the right to deal at their own discretion with German nationals who do not desire to be repatriated, and all repatriation is conditional on the immediate release of any Allied subjects still in Germany. The German Government is to accord facilities to Commissions of Enquiry in collecting information in regard to missing prisoners of war, and in imposing penalties on German officials who have concealed Allied nationals. The German Government is to restore all property belonging to Allied prisoners, and there is to be a reciprocal exchange of information as to dead prisoners and their graves.

GRAVES. The Allies and the German Government are to respect and maintain the graves of all soldiers and sailors buried in their territories and to recognize and assist any Commissions appointed by the Allies in con-

nexion with them, agreeing also to give any practicable facilities for removal and reburial.

SECTION VII

RESPONSIBILITIES FOR THE CRIMES OF THE WAR

The Allies publicly arraign the ex-Emperor William II. "for a supreme offence against International Morality, and the Sanctity of Treaties."

The ex-Emperor's surrender is to be asked for from the Dutch Government, and a special Tribunal is to be set up, consisting of one judge from each of the five Great Powers. The Tribunal is to be guided by the highest principles of international policy, and is to have the duty of fixing whatever punishment it thinks should be imposed. Military Tribunals are to be set up by the Allies to try persons accused of acts of violation of the laws and customs of war, and the German Government is to hand over all persons so accused. Similar Tribunals are to be set up by any particular Allied Power against whose nationals criminal acts have been committed. The accused are to be entitled to name their own counsel, and the German Government is to undertake to furnish all documents and information the production of which may be necessary.

SECTION VIII

REPARATION AND RESTITUTION

"The Allied and Associated Governments affirm, and Germany accepts on behalf of herself and her Allies, the responsibility for causing all the loss and damage to which the Allied and Associated Governments and their nationals have been subjected as a consequence of the war imposed upon them by the aggression of the enemy States."

While the grand total of damages assessed against Germany may exceed her ability to pay, she undertakes to make compensation for all damages caused to civilians under seven main categories:—

- (a) Damage by personal injury to civilians caused by acts of war, directly or indirectly.
- (b) Damage caused to civilians by acts of cruelty ordered by the enemy, and to civilians in the occupied territories.
- (c) Damages caused by maltreatment of prisoners
- (d) Damages to the Allied peoples represented by pensions and separation allowances, capitalized at the signature of this Treaty.
- (e) Damages to property other than naval or military materials
- (f) Damage to civilians by being forced to labour
- (g) Damages in the form of levies or fines imposed by the enemy.

The total obligation of Germany to pay, as defined in the category of damages, is to be determined and notified to her after a fair hearing and not later than 1st May, 1921, by an Inter-Allied Reparation Commission. At the same time a schedule of payments to discharge the obligation within thirty years shall be presented. These payments are subject to postponement in certain contingencies. Germany irrevocably recognizes the full authority of this Commission, agrees to supply it with all the necessary information and to pass legislation to effectuate its findings. She further agrees to restore to the Allies cash and certain articles which can be identified.

As an immediate step towards restoration, Germany shall pay within two years 20,000,000,000 marks in either gold, goods, ships, or other specific forms of payment, with the understanding that certain expenses, such as those of the armies of occupation and payments for food and raw materials, may be deducted at the discretion of the Allies.

"In periodically estimating Germany's capacity to pay, the Reparation Commission shall examine the German system of taxation, first, to the end that the sums for reparation which Germany is required to pay shall become a charge upon all her revenues, prior to that for the service or discharge of any domestic loan, and secondly, so as to satisfy itself that in general the German scheme of taxation is fully as heavy proportionately as that of any of the Powers represented on the Commission."

"The measures which the Allied and Associated Powers shall have the right to take, in case of voluntary default by Germany, and which Germany agrees not to regard as acts of war, may include economic and financial prohibitions and reprisals, and in general such other measures as the respective Governments may determine to be necessary in the circumstances."

The Commission shall consist of one representative each of the United States, Great Britain, France, Italy, and Belgium, with all other Allied Powers entitled,

when their claims are under consideration, to the right of representation without voting power. It shall permit Germany to give evidence regarding her capacity to pay, and shall assure her a just opportunity to be heard. It shall make its headquarters at Paris; establish its own procedure and personnel; have general control of the whole reparation problem; and become the exclusive agency of the Allies for receiving, holding, selling, and distributing reparation payments. Majority vote shall prevail except that unanimity is required on questions involving the sovereignty of any of the Allies, the cancellation of all or part of Germany's obligations, the time and manner of selling, distributing, and negotiating bonds issued by Germany, any postponement between 1921 and 1926 of annual payments beyond 1930, and any postponement after 1926 for a period of more than three years, the application of a different method of measuring damage than in a similar former case, and the interpretation of provisions. Withdrawal from representation on the Commission is permitted upon twelve months' notice.

The Commission may require Germany to give from time to time, by way of guaranty, issues of bonds or other obligations to cover such claims as are not otherwise satisfied. In this connexion and on account of the total amount of claims, bond issues are presently to be required of Germany in acknowledgment of its debt as follows:—20,000,000,000 marks gold, payable not later than the 1st May, 1921, without interest; 40,000,000,000 marks gold bearing 2½ per cent interest between 1921 and 1926, and thereafter 5 per cent with a 1 per cent sinking fund payment beginning in 1926, and an undertaking to deliver 40,000,000,000 marks gold bearing interest at 5 per cent under terms to be fixed by the Commission.

Interest on Germany's debt will be 5 per cent, unless otherwise determined by the Commission in the future, and payments that are not made in gold may "be accepted by the Commission in the form of properties, commodities, businesses, rights, concessions, &c." Certificates of beneficial interest, representing either bonds or goods delivered by Germany, may be issued by the Commission to the interested Power, no Power being entitled, however, to have its certificates divided into more than five pieces. As bonds are distributed and pass from the control of the Commission, an amount of Germany's debt equivalent to their par value is to be considered as liquidated.

SHIPPING

The German Government recognizes the right of the Allies to the replacement, ton for ton and class for class, of all merchant ships and fishing-boats lost or damaged owing to the war, and agrees to cede to the Allies all German merchant ships of 1,600 tons gross and upwards, one-half of her ships between 1,600 and 1,000 tons gross, and one-quarter of her steam trawlers and other fishing-boats. These ships are to be delivered within two months to the Reparation Commission, together with documents of title evidencing the transfer of the ships from encumbrance.

"As an additional part of reparation," the German Government further agrees to build merchant ships for the account of the Allies to the amount of not exceeding 200,000 tons gross annually during the next five years.

All ships used for inland navigation taken by Germany from the Allies are to be restored within two months, the amount of loss not covered by such restitution to be made up by the cession of the German river fleet up to 20 per cent. thereof.

DEVASTATED AREAS

Germany undertakes to devote her economic resources directly to the physical restoration of the invaded areas. The Reparation Commission is authorized to require Germany to replace the destroyed articles by the delivery of animals, machinery, &c., existing in Germany, and to manufacture materials required for reconstruction purposes—all with due consideration for Germany's essential domestic requirements.

SPECIAL PROVISIONS

Germany is to restore within six months the Koran of the Caliph Othman, formerly at Medina, to the King of the Hedjaz, and the skull of the Sultan Mkwawa, formerly in German East Africa, to His Britannic Majesty's Government.

The German Government is also to restore to the French Government certain papers taken by the German authorities in 1870, belonging then to M. Rouher, and to restore the French flags taken during the war of 1870-71.

SECTION IX

FINANCE

Powers to which German territory is ceded will assume a certain portion of the German pre-war debt, the amount to be fixed by the Reparation Commission on the basis of the ratio between the revenues of the ceded territory and Germany's total revenues for the three years preceding the war. In view, however, of the special circumstances under which Alsace-Lorraine was separated from France in 1871, when Germany refused to accept any part of the French public debt, France will not assume any part of Germany's pre-war debt, nor will Poland share in certain German debts incurred for the oppression of Poland. The value of German Government property in ceded territory will in general be credited to Germany on account of Reparation, but no credit will be given for any German Government property in Alsace-Lorraine. Mandatory Powers will not assume any German debts or give any credits for German Government property. Germany renounces all rights of representation on, or control of, State banks, Commissions, or other similar international financial and economic organizations.

Germany is required to pay the total cost of the Armies of Occupation from the date of the Armistice as long as they are maintained in German territory, and this cost is to be a first charge on her resources. The cost of Reparation is the next charge, after making such provision for payments for imports as the Allies may deem necessary.

Germany is to deliver to the Allied Powers all sums deposited in Germany by Turkey and Austria-Hungary in connection with the financial support extended by her to them during the war, and to transfer to the Allies all claims against Austria-Hungary, Bulgaria or Turkey in connection with agreements made during the war. Germany confirms the renunciation of the Treaties of Bucharest and Brest-Litovsk.

On the request of the Reparation Commission, Germany will expropriate any rights or interests of her nationals in public utilities in ceded territories or those administered by mandataries, and in Turkey, China, Russia, Austria-Hungary and Bulgaria, and transfer them to the Reparation Commission, which will credit her with their value. Germany guarantees to repay to Brazil the fund arising from the sale of Sao Paulo coffee which she refused to allow Brazil to withdraw from Germany.

SECTION X

ECONOMIC CLAUSES

CUSTOMS. The Treaty contains detailed provisions for securing that Germany shall not discriminate, directly or indirectly, against the trade of Allied and Associated countries.

These provisions will remain in force for five years, unless extended by the Council of the League of Nations. Temporary provision is made for the free entrance into Germany, up to a limited amount, of products of Alsace-Lorraine, Luxemburg, and German territory ceded to Poland. The German import tariff applicable at the outset to Allied goods will not exceed the lowest rates of 1914. After six months Germany will be free to raise her tariff, so long as it is impartially applied to all the Allies, except as regards a few specified articles, mainly agricultural products, with regard to which the restriction will extend for a further period of two-and-a-half years. Power is reserved in case of necessity to impose a special Customs régime in the occupied areas.

SHIPPING. Vessels of the Allies are to enjoy both national and most-favoured-nation treatment in Germany for at least five years, and this provision will continue thereafter on condition of reciprocity, unless revised by the Council of the League of Nations.

As regards fishing, coasting trade, and towage, most-favoured-nation treatment is to be accorded for the same period as for Customs matters.

Provision is made for the recognition by Germany of ships' certificates, and of the places of registry of ships belonging to States without a seaboard.

UNFAIR COMPETITION. Germany undertakes to protect the trade of the Allies against unfair competition, and, in particular, to suppress the use of false markings and indications of origin, and, on condition of reciprocity, to respect the laws and judicial decisions of Allied and Associated States in respect of regional appellations of wines and spirits.

TREATMENT OF NATIONALS. Germany is not to impose on the nationals of the Allied States or their property any restrictions which were not in force before the war or any taxes, unless those restrictions and taxes

are applied to her own nationals. She is also prevented from imposing restrictions in regard to the exercise of occupations which are not applicable to all foreigners. These provisions are to be in force for a period of five years, and, if a majority of the Council of the League of Nations so decides, for an additional period not exceeding five years. German nationality shall not continue to attach to a person who has become a national of an Allied or Associated State.

MULTILATERAL CONVENTIONS. Some forty multilateral Conventions are renewed between Germany and the Allies parties thereto, but special conditions are attached to Germany's readmission to several. For example, as to postal and telegraphic Conventions, Germany must not refuse her consent to special arrangements concluded by the new States. She must agree as respects the Radio-telegraphic Convention to fulfil the provisional rules to be communicated to her and adhere to a new Convention when formulated; under the North Sea Fisheries and North Sea Liquor Traffic Conventions, rights of inspection and police over Allied fishing-boats are, for at least five years, to be exercised only by vessels of Allied Powers. Germany loses special rights granted her under Article 3 of the Samoa Treaty of 1899 and other Treaties, and in particular is to renounce her right to the Boxer indemnities subsequent to China's entry into the war.

BILATERAL TREATIES. Each Allied State may, if it desires, renew any of its treaties with Germany, in so far as consistent with the Peace Treaty, by giving notice within six months. The Treaties entered into by Germany since the 1st August, 1914, with other enemy States, and before or since then with Rumania, Russia, or Governments representing parts of former Russian territory, are abrogated, and concessions granted under pressure to German nationals annulled. The Allies are to enjoy the privileges conferred under treaties entered into by Germany with other enemy States before the 1st of August, 1914, and under treaties entered into by Germany with neutral States during the war.

PRE-WAR DEBTS. Clearing Offices are to be established within three months in Germany and in each Allied or Associated State which adopts the plan, and the settlement of pre-war debts and other specified pecuniary obligations will take place through these offices, direct settlement being prohibited. The adjustment of the proceeds of the liquidation of enemy property will also be made through these offices. Each participating State is to take responsibility for obligations of the kinds referred to on the part of its nationals towards nationals of the opposing States, except in cases where at the outbreak of war the debtor was insolvent. Claims are to be discussed between the Clearing Offices of the two countries concerned, and failing agreement are to be submitted to arbitration or to the Mixed Arbitral Tribunal referred to below. The sums due to the nationals of each country are to be paid by the Clearing Office in that country and the sums owing by such nationals are to be debited to it. Debts are to be paid in the currency of the Allied country concerned, and the rate of exchange to be adopted, failing specific provision in the contract, is to be the average cable transfer rate prevailing in that country during the month immediately preceding the outbreak of war between the country in question and Germany. It is optional with any Allied Power to participate in the above system.

ENEMY PROPERTY. The action of liquidation, control, &c., taken in the Allied countries and in Germany in regard to enemy property and businesses under exceptional war measures is confirmed, subject to compensation in respect of loss to the property, &c., of Allied nationals, to be determined by the Mixed Arbitral Tribunal and charged upon the property of German nationals which is under the control of the Claimant's State. Any compensation due to her own nationals is to be paid by Germany.

All action of liquidation, control, &c., in Germany is to be stayed, and the Allied property, if not completely liquidated, is to be restored. Nationals of countries which did not make any general liquidation of German property may require the restoration, if possible, of their actual property by the German Government, in whose hands it may now be. Stipulations are included for the protection of returned property and businesses in Germany in the future.

The Allies reserve the right to retain and liquidate all German property within their territory. The net proceeds of sales of such property, both during and after the war, are to be credited to Germany, and to be applied by each State to the satisfaction of claims by its nationals with regard to their property in Germany or debts owing to them by Germans.

CONTRACTS. Pre-war contracts between Allied nationals and German nationals are in general cancelled

as from the date at which the parties became enemies. Exception is made in the case of agreements for the transfer of real or personal property, where the property therein had already passed, leases of land and houses, contracts of mortgage, pledge or lien, mining concessions, contracts with Governments and public bodies, and insurance contracts. In regard to the last-named class of contracts, detailed provision is made, as indicated below.

Powers are reserved for the maintenance of contracts, the execution of which is regarded by an Allied State as in the general interest, subject, if necessary, to the payment of equitable compensation to be fixed by the Mixed Arbitral Tribunal.

Having regard to constitutional difficulties in the case of the United States of America, Brazil, and Japan, these countries are excepted from the provisions relating to pre-war contracts.

Fire-insurance contracts are not considered dissolved by the war, even if premiums have not been paid, but lapse at the date of the first annual premium falling due three months after the Peace. Life insurance contracts are not dissolved merely by reason of the war, but where they have lapsed the surrender value may be claimed, or if the lapse was due to payment of premiums being prevented by the enforcement of measures of war the contract may be restored on payment of premiums with interest. Marine insurance contracts are dissolved by the outbreak of war, except where the risk had already attached. Where the same risk was again insured against, after war had begun, the new policy is to be considered as substituted for the old. Where the risk had not attached at the outbreak of war, premiums paid are recoverable. The insurance treaties are abrogated unless invasion has made it impossible for the reinsured to find another reinsurer. Any Allied or Associated Power, however, may cancel all the life insurance contracts running between its nationals and a German insurance or re-insurance company, the latter being obliged to hand over the proportion of its assets attributable to such policies.

A Mixed Arbitral Tribunal is to be established between each of the Allies and Germany, consisting of one Member appointed by each of the two Governments, and a President to be chosen, failing agreement, by the Council of the League of Nations, or until this is set up, by the present President of the Swiss Federal Council. This Tribunal is to decide all disputes relating to contracts made before the date of the Treaty of Peace between nationals of the Allied States and German nationals, so far as they do not fall within the jurisdiction of Allied or Associated or Neutral Courts.

INDUSTRIAL PROPERTY. Rights in industrial, literary, and artistic property are re-established, but subject in the case of German-owned rights, to the effect of the special war measures of the Allies, the right of imposing on German patents and copyrights conditions in the public interest or to secure the fulfilment of Germany's obligations is reserved. Extensions of time are given for the accomplishment of formalities, for the working of patents, and for securing rights under the international conventions. Except as between the United States of America and Germany, pre-war licenses are cancelled, subject to the right of the old licensee to demand a new license on terms to be specially settled, and except as between the same countries, the right to sue for infringement committed during the war is not recognized.

OPIMUM. The High Contracting Powers who have not signed or ratified the Opium Convention of 1912 agree to bring it into force.

SECTION XI

AERIAL NAVIGATION

Aircraft of the Allied and Associated Powers shall have full liberty of passage and landing over and in German territory, equal treatment with German planes as to use of German airdromes, and with most-favored-nation planes as to internal commercial traffic in Germany. Germany agrees to accept Allied certificates of nationality, airworthiness, or competency and licenses and to apply the convention relative to Aerial Navigation concluded between the Allied and Associated Powers to her own aircraft over her own territory. These rules apply until 1923 unless Germany has since been admitted to the League of Nations or to the above Convention.

SECTION XII

PORTS, WATERWAYS AND RAILWAYS

Germany is required to grant freedom of transit and full national treatment to persons, goods, vessels, rolling stock, &c., coming from or going to any Allied or Associated State and passing in transit through German

territories. Goods in transit are to be free of Customs duties. Rates of transport are to be reasonable and no charges or facilities are to depend directly or indirectly on the flag of the vessel. Provisions are made against discrimination by control of transigrant traffic; and all kinds of indirect discrimination are prohibited.

International transport is to be expedited, particularly for perishable goods. There is to be no discrimination in transport charges and facilities against Allied ports.

Free zones in German ports are to be maintained, and adequate facilities are to be provided for trade requirements without distinction of nationality. Only certain limited charges are permissible in Free Ports.

The Elbe, from the junction of the Vltava (Moldau) and the Vltava below Prague; the Oder, from its confluence with the Oppa; the Niemen, below Grodno; and the Danube, below Ulm, are declared international, together with the portions of their affluents. Nationals, property and flags of all States are to be treated on a footing of perfect equality with subjects, &c., of the riparian States, and various conditions are imposed to ensure facilities and reasonable charges and the maintenance of navigation, under the supervision of the League of Nations, and of International Commissions. These are to meet in the near future to prepare projects for the revision of the existing agreements, which are temporarily to remain in force.

Germany is to hand over within three months from notification a proportion of its river shipping, tugs, and material.

In the case of the Danube, the former Commission is to resume its pre-war powers, but only Great Britain, France, Italy, and Rumania are to be represented on it. From the point where the competence of the Commission ceases, an International Commission is to be appointed to administer the whole Upper Danube, until a definitive Statute is arrived at.

Provision is also made for a deep-draught Rhine-Danube Canal, should it be decided to construct it within twenty-five years.

The Rhine and Moselle form the subject of a special series of clauses. The Convention of 1868 is in general to remain in force with important modifications; the expanded Central Commission is to sit at Strasbourg, France, to name the President. As Holland is a party to this Convention, the modifications are subject to her assent.

Within three months, Germany is to hand over to France a proportion of tugs and river shipping on the Rhine harbours or shares in German navigating companies. A proportion of buildings, tugs, &c. owned by Germans in Rotterdam harbour on the 1st August 1914, or shares in such concerns, is similarly to be handed over.

France is to have full rights all along her own frontier to use water from the Rhine for canals, &c., and to carry out works for deriving motive power, subject to certain payments and to the consent of the Commission.

Germany is to undertake to make no canals on the right bank opposite the French frontier, and to grant France certain privileges on the right bank for the establishment of certain engineering works, subject to the payment of compensation. Switzerland is also entitled to demand similar rights for the upper part of the river.

If within 25 years Belgium decides to construct a Rhine-Meuse Canal, the German Government is bound to construct such parts of it as fall within German territory, according to plans drawn up by the Belgian Government, expenses to be divided among the various States.

Germany is to make no objection to the Commission extending its jurisdiction if desired to the Lower Moselle (with the consent of the Luxembourg Government), to the Upper Rhine (with the consent of the Swiss Government), and to the lateral canals and waterways which may be constructed to improve navigation.

The German Government is to lease to the Czechoslovak Republic, for 99 years, areas in the harbours of Hamburg and Stettin as free zones.

RAILWAYS. The Railway Clauses provide that goods consigned from or to Allied States or from Germany, or in transit through Germany are entitled generally to the most favourable conditions available. Certain railway tariff questions are dealt with.

When a new Railway Convention has replaced the Berne Convention of 1890, it will be binding on Germany; in the meantime she is to follow the Berne Convention.

Germany is to cooperate in the establishment of passenger and luggage services with direct booking between Allied States over her territory, under favourable conditions, as well as emigrant train services.

Germany is to fit her rolling stock with apparatus allowing of its being incorporated in Allied goods trains, and *vice versa*, without interfering with the brake system. Provision is made for the handing over of the installations of lines in transferred territory, and of an equitable proportion of rolling stock for use therein. Commissions are to settle the working of lines linking up two parts of one country and crossing another, or branch lines passing from one country to another.

In the absence of particular agreements Germany is to allow such lines to be built or improved as may be necessary to ensure good services between one Allied State and another, if called upon to do so within 25 years with the concurrence of the League of Nations, the Allied States concerned paying the cost.

Germany is to agree, at the request of the Swiss and Italian Governments, to the denunciation of the 1909 Convention as to the St Gothard route.

As a temporary arrangement, Germany is to execute instructions given in the name of the Allies as to transport of troops, material, munitions, &c., transport for revictualling of certain regions, and reestablishment of normal transport, postal and telegraphic services.

Finally, Germany is to agree to subscribe to any General Conventions regarding the international régime of transit, waterways, ports, or railways which may be concluded by the Allies (with the approval of the League of Nations) within five years.

Differences are to be settled by the League of Nations. Certain specified articles, *e. g.*, those providing for equal treatment in matters of transit and transport, are subject to revision by the League of Nations after five years. Failing revision, they will only continue in force in relation to any Allied State which grants reciprocal treatment.

THE KIEL CANAL. The Kiel Canal is to remain free and open to ships of war and merchant shipping of all nations at peace with Germany. Subjects, goods, and ships of all States are to be treated on terms of equality in the use of the Canal, and charges are to be limited to those necessary for the upkeep and improvement of the Canal, for which Germany is to be responsible. In cases of violation of these provisions or disagreements as to them, States concerned may appeal to the jurisdiction established by the League of Nations, and may demand the appointment of an International Commission.

SECTION XIII

THE LABOUR CONVENTION

Under the provisions of the Labour Convention:—

1. An International Conference is to be held annually, to propose Labour reforms for adoption by States composing the League of Nations.
2. There is to be a governing body to act as executive and to prepare the Agenda for the Conference, and an International Labour Office for the collection and distribution of information and reports. The head of this office will be responsible to the governing body.
3. The Annual Conference will consist of four representatives from each State, two for the State and one each for employers and employed. Each Delegate may vote independently. The Conference will have power to adopt by a two-third majority recommendations or draft conventions on Labour matters. Recommendations or draft conventions so adopted must be brought by each State before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action. If a draft convention receives the approval of the competent authority, the State in question is under obligation to ratify it and to carry it into effect. Should any State fail to observe the above obligations, it will be open to the governing body to appoint a Commission of Inquiry, as a result of whose findings the League of Nations may take economic measures against the offending State.
4. Special provision is made to prevent any conflict with the constitution of the United States or other Federal States.
5. To meet the case of countries where climate, imperfect industrial development, or other special circumstances render labor conditions substantially different from those obtaining elsewhere, the Conference must take the difference into account in framing the Convention. A protocol attached to the Convention provides that the first meeting shall be at Washington in the present year, and sets up an International Organizing Committee for that purpose. The protocol

also contains the agenda for the first meeting, which include the principle of the eight-hours day, the question of unemployment, and of the employment of women and children, especially in dangerous trades.

Appended to the section containing the Labour Convention is an affirmation by the High Contracting Parties of the methods and principles for regulating labour conditions, which all industrial communities should endeavor to apply so far as their special circumstances permit. Amongst these are that labour should not be regarded merely as a commodity or article of commerce; the right of association for all lawful purposes for the employer as well as for the employed; the payment to the employed of a wage implying a reasonable standard of life, as understood in their time and country. The adoption of an eight-hours day or a forty eight hours week where it has not already been attained; the adoption of a weekly rest of at least twenty-four hours, including Sunday where practicable. The abolition of child labour and the limitation of the labour of the young, so as to permit the continuance of their education and proper physical development. The principle of equal pay for men and women for equal work. Any legal standard for conditions of labour to have regard in each country to the equitable economic treatment of all workers resident therein. The provision by each State of a system of inspection for the protection of the employed, in which women should take part.

SECTION XIV

GUARANTEES

WESTERN EUROPE. As a guarantee for the execution of the Treaty, German territory to the west of the Rhine, together with the bridgeheads, will be occupied by Allied and Associated troops for fifteen years. If the conditions are faithfully carried out by Germany, certain districts, including the bridgehead of Cologne, will be evacuated at the expiration of five years; certain other districts, including the bridgehead of Coblenz, will be evacuated after ten years, and the remainder, including the bridgehead of Mainz, will be evacuated after fifteen years. In case the Inter-Allied Reparation Committee finds that Germany has failed to observe the whole or part of her obligations, either during the occupation or after the fifteen years have expired, the whole or part of the areas specified will be reoccupied immediately. If before the expiration of the fifteen years Germany complies with all the undertakings resulting from the present Treaty, the occupying forces will be withdrawn immediately.

EASTERN EUROPE. Similarly, all German troops at present in the territories to the east of the new frontier shall return as soon as the Allies think the moment suitable. They are to abstain from all requisitions, &c., and are in no way to interfere with such measures for national defence as may be adopted by the provisional Governments concerned.

All questions regarding occupation not provided for by the Treaty will be regulated by a subsequent Convention or Conventions which will have similar force and effect.

SECTION XV

MISCELLANEOUS

Germany agrees to recognize the full validity of the Treaties of Peace and additional conventions to be concluded by the Allied and Associated Powers with the Powers allied with Germany, to agree to the decisions to be taken as to the territories of Austria-Hungary, Bulgaria, and Turkey, and to recognize the new States in the frontiers to be fixed for them.

The High Contracting Parties note the Treaty of July, 1918, between France and the Principality of Monaco.

They agree that chairmen of Commissions shall under certain circumstances have a casting vote.

The work of religious missions maintained by German Societies in territory transferred to or belonging to the Allied or Associated Powers is to be continued under trustees appointed by those Powers.

In a Barrer Clause, Germany undertakes not to put forward any pecuniary claim against any Allied Power signing the present Treaty, based on events previous to the coming into force of the Treaty.

Germany accepts all decrees, &c., as to German ships and goods made by any Allied Prize Court, and the Allies reserve the right to examine all decisions of German Prize Courts.

The present Treaty, of which the French and English texts are both authentic, shall be ratified, and the deposit of ratification made in Paris, as soon as

possible. Various diplomatic provisions as to ratification follow. The Treaty is to enter into force in all respects for each Power on the date of deposit of its ratification.

TREATY WITH AUSTRIA

The treaty with Austria had been formulated slowly and was not complete when it was handed to the Austrian delegation on June 2d, but still lacked specific provisions in regard to finance, reparation, and boundaries. The text was completed and supplied in full to the Austrian delegates on July 20th, and 15 days were allowed them in which to submit objections. It was ratified by the Austrian National Assembly, October 17th, and signed by the President of the Austrian Republic, October 26th. The Austrian treaty followed in many respects the same lines as the treaty with Germany. It recognized Austria as a republic with virtually the old frontiers on the side of Bavaria, Bohemia, and Hungary, but the Trentino, Carinthia, southern Tirol, and the lower part of Styria were recognized as belonging to Italy and Jugo-Slavia. It was stipulated that Austria should recognize the independence of the new states formed within her ancient borders and also those which constituted a part of the former Russian empire. There were elaborate provisions for the protection of national minorities. In the matter of disarmament Austria was required to surrender her entire navy together with arms and munitions, and she was forbidden to reconstruct or possess military, naval, or air forces. She was restricted to a volunteer force of 30,000 men. She must repair the damages in the invaded regions in accordance with terms to be fixed by the reparation commission, organized under the treaty with Germany. The principal war debt of the Austrian empire was to be apportioned among the states as they existed at present after the dismemberment of the empire. Compensation was to be made to the Allies for ships lost or destroyed in the war. Records, documents, or treasures, etc., taken from invaded or ceded territories must be restored.

THE BULGARIAN TREATY

The treaty with Bulgaria was signed at Neuilly near Paris, November 27th. First, in respect to the financial provisions. The debt to Germany valued at between 3,000,000,000 and 4,000,000,000 francs was abolished by the treaty. The total indemnity imposed was 2,250,000,000 francs, which included all the reparations for the devastation and pillage of Serbia, Rumania, and Greek Macedonia. An inter-Allied commission on reparations was to sit at Sofia and direct the return of the goods taken from the Allies but was not to charge for the damages caused. In this commission the neighboring countries to Bulgaria were not represented. No arrangement was made for the payment of indemnities to individual powers: For example, Serbia was to receive only her share of the total indemnity. This was criticized by friends of Serbia as unjust and that was the attitude assumed in the French press which also complained that Bulgaria retained too much of her territory. French papers pointed out that on the side of Rumania, the frontier of 1913 remained unchanged; on the side of Serbia there was a mere straightening of the lines; in the north a change of a few kilometers; a little further to the south there were some slight

cessions; that at the extreme south the salient of Strumitza along with the city of that name passed to Serbia; that in short the only important cession was that of a large part of Thrace, acquired by the Bulgarians in 1913, and inhabited largely by Greeks and Turks. This was taken from Bulgaria but its status was left for future decision.

SENATE RESERVATIONS ON PEACE TREATY

The resolution of ratification of the Peace Treaty, rejected November 19, is as follows:

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the treaty of peace with Germany concluded at Versailles on the twenty-eighth day of June, 1919, subject to the following reservations and understandings, which are hereby made a part and condition of this resolution or ratification, which ratification is not to take effect or bind the United States until the said reservations and understandings adopted by the Senate have been accepted by an exchange of notes as a part and a condition of this resolution of ratification by at least three of the four principal allied and associated powers, to wit, Great Britain, France, Italy, and Japan:

1. The United States so understands and construes Article 1 that in case of notice of withdrawal from the League of Nations, as provided in said article, the United States shall be the sole judge as to whether all its international obligations and all its obligations under the said covenant have been fulfilled, and notice of withdrawal by the United States may be given by a concurrent resolution of Congress.

2. The United States assumes no obligation to preserve the territorial integrity or political independence of any other country or to interfere in controversies between nations—whether members of the League or not—under the provisions of Article 10, or to employ the military or naval forces of the United States under any article of the treaty for any purpose, unless in any particular case the Congress, which, under the Constitution, has the sole power to declare war or authorize the employment of the military or naval forces of the United States, shall by act or joint resolution so provide.

3. No mandate shall be accepted by the United States under Article 22, Part 1, or any other provision of the treaty of peace with Germany, except by action of Congress.

4. The United States reserves to itself exclusively the right to decide what questions are within its domestic jurisdiction and declares that all domestic and political questions relating wholly or in part to its internal affairs, including immigration, labor, coastwise traffic, the tariff, commerce, the suppression of traffic in women and children, and in opium and other dangerous drugs, and all other domestic questions, are solely within the jurisdiction of the United States and are not under this treaty to be submitted in any way either to arbitration or to the consideration of the Council or of the Assembly of the League of Nations, or any agency thereof, or to the decision or recommendation of any other power.

5. The United States will not submit to arbitration or to inquiry by the Assembly or by the Council of the League of Nations, provided for in said treaty of peace, any questions which in the judgment of the United States depend upon or relate to its long-established policy, commonly

known as the Monroe Doctrine; said doctrine is to be interpreted by the United States alone and is hereby declared to be wholly outside the jurisdiction of said League of Nations and entirely unaffected by any provision contained in the said treaty of peace with Germany.

6. The United States withholds its assent to Articles 156, 157, and 158, and reserves full liberty of action with respect to any controversy which may arise under said articles between the Republic of China and the Empire of Japan.

7. The Congress of the United States will provide by law for the appointment of the representatives of the United States in the Assembly and the Council of the League of Nations, and may in its discretion provide for the participation of the United States in any commission, committee, tribunal, court, council, or conference, or in the selection of any members thereof and for the appointment of members of said commissions, committees, tribunals, courts, councils, or conferences, or any other representatives under the treaty of peace, or in carrying out its provisions, and until such participation and appointment have been so provided for and the powers and duties of such representatives have been defined by law, no person shall represent the United States under either said League of Nations or the treaty of peace with Germany, or be authorized to perform any act for or on behalf of the United States thereunder, and no citizen of the United States shall be selected or appointed as a member of said commissions, committees, tribunals, courts, councils, or conferences except with the approval of the Senate of the United States.

8. The United States understands that the Reparation Commission will regulate or interfere with exports from the United States to Germany, or from Germany to the United States, only when the United States by act or joint resolution of Congress approves such regulation or interference.

9. The United States shall not be obligated to contribute to any expenses of the League of Nations, or of the secretariat, or of any commission, or committee, or conference or other agency, organized under the League of Nations or under the treaty or for the purpose of carrying out the treaty provisions, unless and until an appropriation of funds available for such expenses shall have been made by Congress.

10. If the United States shall at any time adopt any plan for the limitation of armaments proposed by the Council of the League of Nations, under the provisions of Article 8, it reserves the right to increase such armaments without the consent of the Council whenever the United States is threatened with invasion or engaged in war.

11. The United States reserves the right to permit, in its discretion, the nationals of a covenant-breaking State, as defined in Article 16 of the covenant of the League of Nations, residing within the United States or in countries other than that violating said Article 16, to continue their commercial, financial, and personal relations with the nationals of the United States.

12. Nothing in Articles 296, 297, or in any of the annexes thereto or in any other article, section, or annex of the treaty of peace with Germany shall, as against citizens of the United States, be taken to mean any confirmation, ratification, or approval of any act otherwise illegal or in contravention of the right of citizens.

13. The United States withholds its assent to

Part XIII. (Articles 387 to 427, inclusive) unless Congress by act or joint resolution shall hereafter make provision for representation in the organization established by said Part XIII., and in such event the participation of the United States will be governed and conditioned by the provisions of such act or joint resolution.

14. The United States assumes no obligation to be bound by any election, decision, report, or finding of the council or assembly in which any member of the League and its self-governing dominions, colonies, or parts of empire, in the aggregate have cast more than one vote, and assumes no obligation to be bound by any decision, report, or finding of the council or assembly arising out of any dispute between the United States and any member of the League if such member, or any self-governing dominion, colony, empire, or part of empire united with it has voted.

WARREN, HENRY PITT. Educator, died at Albany, N. Y., May 27. He was born at Windham, Me., Mar. 21, 1846, and graduated at Yale in 1870. He taught in schools in New Hampshire and New Jersey, and was headmaster of the Albany Academy.

WAR TRADE BOARD. The signing of the armistice did not at once bring to a close the activities of the War Trade Board but rather provided ample opportunity for its continued usefulness. The Board was created by executive order on Oct. 12, 1917, under the Trading with the Enemy Act. The Departments of State, the Treasury, Agriculture and Commerce were represented on the board, as were the Food Administration and Shipping Board. It had representatives in important neutral and allied countries. The board was divided into 10 bureaux: administration, imports, exports, transportation, enemy trade, foreign agents, research and statistics, branches and customs, war trade intelligence and the division of information. After February, 1918, all imports and exports were subjected to the rules of the board. Under its regulations it permitted the shipment of foodstuffs and other essentials to neutral nations in need, provided those countries guaranteed that the commodities would not be re-shipped into enemy countries. The Board established an Export Conservation List on which it placed all commodities for which special individual licenses were required for exportation. Through the Information Division, the Board issued the *War Trade Board Journal*, giving details of new rulings, etc.

Upon the signing of the armistice the Board gradually removed commodities from the Export Conservation List and increased those on the Free List. The policy of the Board was to encourage the resumption of normal trade relations as soon as possible. This policy was reflected in its reduction of the Export Conservation List and Restricted Imports List and the neutral countries of northern Europe were thereby greatly aided. Meanwhile the import rules of England were relaxed and other countries followed her example.

On May 12, 1919, the personnel, powers, duties and records of the War Trade Board were transferred to the Department of State as of July 1, 1919, by order of the President. All licenses previously issued by the board continued to be valid except for the importation or exportation of wheat or wheat flour. War Trade Board ruling 797 announced that effective July 1, 1919

its powers over the exportation and importation of these commodities were transferred to the United States Wheat Director. "All licenses will continue to be issued in the name of the War Trade Board, and all applications for licenses, and all correspondence, pertaining to functions performed by the War Trade Board and now assumed by the Department of State are to be addressed to the War Trade Board as heretofore." See WAR INDUSTRIES BOARD.

WASHINGTON. POPULATION. The population of the State in 1910 was 1,141,990 and on July 1, 1919 it was estimated to be 1,723,757, a gain during the twelvemonth of 63,000.

AGRICULTURE. The following is compiled from an annual report of the Federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu.	Value
Corn	1919	45,000	1,620,000	\$2,997,000
	1918	50,000	1,900,000	3,230,000
Oats	1919	320,000	12,800,000	11,904,000
	1918	310,000	8,370,000	8,203,000
Barley . .	1919	138,000	4,140,000	5,589,000
	1918	173,000	2,630,000	3,024,000
Wheat	1919	2,440,000	40,100,000	85,814,000
	1918	2,225,000	29,187,000	57,207,000
Hay	1919	794,000	1,906,000	43,838,000
	1918	794,000	1,429,000	36,297,000
Potatoes . .	1919	58,000	7,250,000	10,512,000
	1918	63,000	8,318,000	8,399,000

a Tons.

TRANSPORTATION. The railway mileage of the State in 1919 was about 8046. The longest roads were the Northern Pacific, the Great Northern, and the Oregon and Washington.

INSTITUTIONS. The following is a list of the State institutions, educational, charitable, and penal.

University of Washington, at Seattle; State College of Washington; Normal School at Cheney; Normal School, at Bellingham; Normal School, at Ellensburg; School for Deaf, at Vancouver; School for Blind, at Vancouver; Training School, at Chehalis; School for Girls, at Grand Mound; Soldiers' Home, at Orting; Veterans' Home, at Pt. Orchard; Western Hospital for Insane, at Ft. Steilacoom; Eastern Hospital for Insane, at Medical Lake; Northern Hospital for Insane, at Sedro Wooley; Penitentiary, at Walla Walla; Institution for Feeble Minded, at Medical Lake; Reformatory, at Monroe.

OFFICERS. Governor, Ernest Lister; Lieutenant-Governor, Louis F. Hart; Secretary of State, I. M. Howell; Auditor, F. P. Jameson; Treasurer, W. W. Sherman; Attorney General, L. L. Thompson; Superintendent of Public Instruction, Josephine Corliss Preston; Adjutant-General, Harvey J. Moss; Insurance Commissioner, H. O. Fishback.

JUDICIARY. Chief Justice of Supreme Court, Stephen J. Chadwick; Justices of Supreme Court, Mark A. Fullerton, John F. Main, O. R. Holcomb, John R. Mitchell, Wallace Mount, Emmett N. Parker, Kenneth Mackintosh, Warren W. Tolman; Clerk, C. S. Reinhart. See AGRICULTURAL EXPERIMENT STATIONS; CHILD LABOR.

WASHINGTON AND JEFFERSON COLLEGE. A non-sectarian institution of learning, at Washington, Pa. The enrollment for the fall of 1919 was 442, and there were 24 members in the faculty, including five professors emeriti. The library contains 28,767 volumes. Productive funds amount to \$963,998 and the income for the year was \$274,826. The school was founded

in 1802. Acting President, W. E. Slemmons, D.D.

WASHINGTON AND LEE UNIVERSITY.

A non-sectarian educational institution, at Lexington, Va. In the fall of 1919 there were 596 students and 27 members in the faculty. Productive funds as of Apr. 30, 1919, amount to \$938,977, while the income for the year ending on that date was \$153,164. The library contains approximately 50,000 volumes. President, Henry Louis Smith, Ph.D.

WASHINGTON UNIVERSITY. A non-sectarian co-educational institution, located at St. Louis, Mo. Founded in 1853. Chancellor, Frederic A. Hall, LL.D.

WASHINGTON, UNIVERSITY OF. A co-educational State institution, founded in 1861 at Seattle, Wash. In the fall of 1919 there were enrolled 5008 students. The first term of the summer session of 1919 showed a registration of 1116, and the second term had 905. There were in the fall 223 members in the faculty. The income for the year was \$916,030. The library contains 114,687 volumes, and 514 periodicals. During the year the university acquired the Boeing Aerodynamical Laboratory. Philosophy Hall (a new building) has been started. The teaching of Russian and of Chinese were discontinued, except in Extension service. Colleges of Fisheries, and of Business Administration, were instituted. President, Henry Suzzallo, Ph.D., LL.D.

WASTE RECLAMATION SERVICE. See WAR INDUSTRIES BOARD.

WATERLOW, Sir ERNEST ALBERT. British painter, former president of the Royal Society of Painters in Water Colors, died at Hampstead, England, October 25. He was born in London May 24, 1854, studied in Germany, and obtained the Turner gold medal in 1873. He became associate of the Royal Academy in 1890, and in 1897 he was made president of the Royal Society of Painters in Water Colors. His work was largely influenced by the Barbizon School, especially by Corot, but also shows the influence of Constable. Among his early works may be mentioned: "Galway Gossips," (1887, Tate Gallery, London); "Friends or Foes," (1890); "Golden Autumn," (1896, gold medal, Berlin); "A Summer Shower," (Walker Art Gallery, Liverpool). Later works, which show increased breadth of handling, include: "The Thames from Richmond Hill," (1905); "Suffolk Marshes," (1902); "The River Blyth, Suffolk; Sketch in Essex," (1905); and "The Banks of the Loing."

WATER POWER. The Winnipeg Power Company started the development during the year of what promised to be one of the largest hydro-electric projects in the world. It was located just north of Winnipeg, Man., on the Winnipeg River, and the project involved the construction of a gravity concrete dam 2000 feet long and 70 feet high. Here there were to be eight 21,000 horse-power horizontal type turbines installed in the primary unit and the power generated was designed to supply the city of Winnipeg.

WATER PURIFICATION. See WATERWORKS.

WATERWAYS. See CANALS.

WATERWORKS AND WATER PURIFICATION. The new gravity water-supply system for Greater Winnipeg, Manitoba, was put in

use early in the year. Its construction was a municipal coöperative undertaking in which were associated the cities of Winnipeg and St. Boniface, the town of Transcona, and parts of four other suburbs. The water district has a total area of 92 square miles. The works were paid for by bonds that are a lien on the works and lands in the district. Capital charges will be met by taxes on the lands alone and maintenance and operating expenses will be borne by the municipalities supplied. The water comes from Shoal Lake, an arm of the Lake of the Woods, through an aqueduct 96.3 miles long, mostly of reinforced concrete, with a daily capacity of 120,000,000 U. S. gallons for the upper 84.62 miles to a site for a proposed reservoir with a capacity of 300,000,000 U. S. gallons. From this point the aqueduct has a capacity of 75,000,000 U. S. gallons a day. Of the entire length of the aqueduct, 77.5 miles are of open channel and 18.8 are of conduit under pressure, including a tunnel beneath the Red River that is lined with 60-in. cast iron pipe. *San Francisco* made progress on its Hetch Hetchy aqueduct and let a contract at \$5,448,000 for the construction of the Hetch Hetchy dam, which will be of the siphon spillway type, 311 ft. high, from lowest foundation to crest, 212 ft. high above the stream and 600 ft. long, of the gravity section type. The dam is on the Tuolumne River, about 150 miles from and at an elevation of 3600 ft. above San Francisco. A portion of the fall in the length of the long aqueduct will be utilized to develop a large amount of hydro-electric power. Contracts were let by *New York City* for the Gilboa dam and Sshandaken tunnel to divert the waters of Schoharie Creek southward into the Great Ashokan reservoir and thence through the Catskill aqueduct to New York City, giving an additional supply of 250,000,000 gallons a day and utilizing the full 500,000,000-gallon capacity of the aqueduct. The Gilboa dam will have a masonry portion 160 ft. high and 1300 ft. long, over which the water will flow, and an earth portion 1300 ft. long, with a masonry heart-wall. The dam will store 20,000,000,000 gallons of water when full and will discharge into an 18-mile tunnel, built in rock and lined with concrete. The tunnel will be horse-shoe in shape, 10½ ft. high and 11½ ft. wide in the clear. Its maximum carrying capacity will be 600,000,000 gallons a day, the volume actually carried depending on stream flow and storage conditions. Construction of a new gravity water-supply for Providence, R. I., to replace a pumped and filtered supply taken at a point near the city, was condemned. Acting for Newark, the North Jersey District Water Supply Commission organized an engineering staff to prepare plans for a supplementary gravity water supply from the Ramapo River. Reports recommending large additions to the present filtered water-supplies of Baltimore and Columbus, Ohio, were made.

WATER PURIFICATION. *Sacramento* voted \$1,800,000 for a mechanical water filtration plant to treat 30,000,000 gallons a day from the American Falls River and engaged a large and carefully chosen staff of engineering specialists to design the works. *Detroit*, having made experimental studies in water treatment for a year with a 200,000,000 gallon plant, began plans for a large mechanical filtration plant. The tests indicated that the high daily filtration rate

of 175,000,000 gallons a day would be feasible, in view of the relative clearness of the lake water. A plant with a nominal daily capacity of 300,000,000 gallons was recommended, at an estimated cost of \$8,500,000. *Milwaukee* began experiments with a 250,000-gallon test plant on February 1st, using four types of coagulant mixing chambers, a settling basin and two filters, to test mechanical filtration, and also testing ozone treatment of both filtered and raw water for bacterial reduction.

Bibliography. Wegmann, *Conveyance and Distribution of Water*, (New York); Race, *Chlorination of Water*, (New York).

WATSON, WILLIAM. British physicist, died in London at the beginning of March. At the time of his death he was director of the Central Laboratory, and during the war he had taken a prominent part in the defensive measures against the Germans' use of poisonous gas. He was born in 1868, was educated at King's College School and the Royal College of Science, and was well known as a teacher of physics, and the author of scientific monographs, but was especially celebrated for his part in developing the internal combustion engine. After the first gas attack by the Germans in April, 1915, he began his investigation of defensive appliances which he continued throughout the war. He was frequently gassed himself while at the front. Among his writings may be mentioned: a *Text Book of Physics*, and the *Test of Practical Physics*.

WATT, JAMES, CENTENARY. The one hundredth anniversary of the death of James Watt, which occurred on Aug. 25, 1819, was celebrated at Birmingham, England, on September 16th, 17th, and 18th, with appropriate ceremonies and exhibition of relics. Commemorative addresses were delivered and a memorial fund was started. See CELEBRATIONS.

WEATHER BUREAU. See METEOROLOGY.

WEINGARTNER, FELIX. See MUSIC, *Austria*.

WEIR, JULIAN ALDEN. American painter, died in New York City, December 8. During many years he was one of the central figures in American painting. He was born at West Point, N. Y., Aug. 30, 1852, the son of Robert Walter Weir, the painter; studied under his father and later in Paris under Gérôme. On returning to America he took part in the founding of the Society of American Artists and he later joined Twachtman in founding the group known as the Ten American Painters (1898). He became a member of the National Academy in 1886 and its president in 1915. He received several of the most valued prizes for his work. While in Paris he had fallen under the influence of the Impressionists and his work is classified as belonging to that school. It is remarkable for its skillful handling of delicate colors and its organization of masses. There are specimens of his work in many of the most important public collections in the United States, including the Metropolitan Museum, New York, the Art Institute, Chicago, the International and Corcoran Galleries, Washington, etc. Among his numerous paintings may be mentioned "The Green Bodice," "Idle Hours," and "The Red Bridge," in the Metropolitan Museum in New York, and the "Portrait of a Young Girl" in the Luxembourg, Paris.

WELLESLEY COLLEGE. A non-sectarian

institution for the education of women, at Wellesley, Mass. The total enrollment in the fall of 1919 was 1529; there were 189 officers of instruction and government, 140 being of the teaching staff. Endowment funds, exclusive of Building and Equipment funds, \$2,899,935; income, \$137,054. The library contains 87,696 volumes. A new recitation hall, Founders Hall, was completed and occupied in September. This replaces in part the facilities lost in the burning of College Hall, March, 1914. Wellesley College is one of the beneficiaries of the will of Mrs. Russell Sage; the exact amount of the gift is yet undetermined. At commencement, 1919, an anonymous gift was made to endow a professorship of English Literature. Wellesley was founded in 1875. President, Miss Ellen Fitz Pendleton, Litt.D., LL.D.

WELL SINKING. In a discussion during the year of deep wells and borings into the earth it was brought out that the world's two deepest wells, penetrating to depths of 7579 feet and 7386 feet respectively, were the Lake, near Fairmont, W. Va., and the Goff, near Clarksburg. These wells were sunk by the Hope Natural Gas Co., of Pittsburgh, in an endeavor to reach the rich oil-bearing Clinton sand of Ohio, which it was hoped to encounter at depths between 7000 and 8000 feet. A well at Czuchow, Germany, according to the United States Geological Survey, ranks third with a depth of 7350 feet. The Geary well, sunk near McDonald, Penn., to a depth of 7248 feet by the People's Natural Gas Co., is the fourth deepest on record.

WESLEYAN METHODIST CONNECTION IN AMERICA. Founded at Utica in 1843, this denomination barred from membership all persons connected with slavery, or in any way with the manufacture or sale of intoxicants, and all persons who were members of secret societies. The Twentieth-Quadrennial General Conference was held at Fairmount, Ind., on June 25, 1919. Reports to that conference showed a membership of 19,818, a decrease of 941 over the previous report; 510 churches, valued at \$815,615; 205 parsonages, valued at \$251,915; and 521 Sunday schools, with 30,193 pupils and 2174 teachers. Foreign missions are conducted in Sierra Leone with 18 missionaries, and in India with 20 missionaries. It was decided to start missionary work in Japan. Home missions are maintained in Alabama, and among the Blue Ridge Mountains. A large part of this missionary work is conducted by the Woman's Home and Foreign Missionary Society. Total receipts from all sources amounted to \$118,757.97. Colleges are maintained at Houghton, N. Y.; Central, S. C.; Miltonvale, Kan., and a Theological School, Fairmount, Ind.

WESLEYAN UNIVERSITY. A non-sectarian institution for the education of men, at Middletown, Conn. Enrollment in 1919 was 595, with 53 members in the faculty. Three professors and two lecturers were added in the year. Endowment, \$2,575,223; income, \$243,263. Number of volumes in the library, 114,000. During the year the class of 1863 presented the university with a set of chimes, costing \$9000. An endowment campaign for \$3,000,000 was launched in 1919. Wesleyan was founded in 1831. President, William Arnold Shanklin, L.H.D., LL.D.

WEST, GEORGE STEPHEN. British botanist,

died August 7. After 1909 he was professor of botany in Birmingham University. He was born at Bradford, England, 1876, educated at Cambridge, and was professor of natural history at the Royal Agricultural College of Cirencester, 1899-1906, and from that time on was on the faculty of the Birmingham University. He wrote a large number of papers on various scientific subjects which appear in the leading scientific publications.

WESTERN AUSTRALIA. One of the States of the Commonwealth of Australia, extending from the Indian Ocean to the Northern Territory and South Australia; the largest of the States, with an area of 975,920 square miles. The estimated population on Sept. 30, 1918, was 312,253, as compared with 327,162 in 1914, the decrease being due to enlistments in the war. In 1918, the males numbered 160,026 and the females 152,227. Capital, Perth, with a population (including suburbs), estimated Dec. 31, 1917, at 130,000. Legislative power is vested in a parliament of two houses: The legislative council and the legislative assembly, the former consisting of 30 members, elected for six years; the latter of 50 members elected for three years. A property qualification is imposed on electors to the upper house, but woman suffrage obtains in elections for both houses. Executive power is in a governor and ministry. Governor at the beginning of 1919, Sir W. Ellison Macartney; prime minister, H. P. Colebatch. See AUSTRALIA.

WESTERN RESERVE UNIVERSITY. A non-sectarian institution of learning, located at Cleveland, Ohio. The enrollment for the summer session of 1919 was 793; for the fall term, 1925, and in Extension courses, 1427, a total of 4145. In 1918-19 there were 369 members in the faculty. The library contained 134,000 volumes. For the same year the endowment was \$4,074,039, and the income, \$410,719. In 1919, entrance requirements for Adelbert College, the undergraduate college, were broadened by an increase of electives and a diminution of requirements. Compulsory recreational athletics for all candidates for the Bachelor of Arts degree was adopted in 1919. The university was founded in 1825, as Adelbert College, and now includes a women's college and several professional schools. President, Charles Franklin Thwing, LL.D., Litt.D.

WESTON, THEODORE. Civil engineer, died in New York City, May 6. He was born at Sandy Hill, Washington County, N. Y., Oct. 9, 1832; graduated at Yale in 1853, and engaged in railway and canal surveying in New York City. From 1857 to 1860 he was assistant engineer in the Brooklyn Water Works and he had charge of the sewage and drainage in New York City from 1861 to 1870. He was the engineering architect of the Metropolitan Museum of Art 1884-90 and other buildings. He wrote a report on the water supply of Brooklyn (1861), and other technical monographs.

WEST POINT. See UNITED STATES MILITARY ACADEMY.

WEST VIRGINIA. POPULATION. The population of the State in 1910 was 1,221,119, and on July 1, 1919, it was estimated to be 1,465,729, a gain in the last year of 26,000.

AGRICULTURE. The following table is compiled from a report issued by the Federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1919	735,000	24,990,000	\$40,984,000
	1918	750,000	23,250,000	41,850,000
Oats	1919	190,000	4,750,000	4,322,000
	1918	160,000	4,320,000	3,931,000
Wheat	1919	400,000	5,400,000	11,880,000
	1918	348,000	4,942,000	10,922,000
Tobacco	1919	15,000 ^a	10,500,000	5,250,000
	1918	13,600	9,792,000	3,584,000
Hay	1919	810,000	51,215,000	31,104,000
	1918	798,000	1,037,000	24,370,000
Potatoes	1919	57,000	5,130,000	8,978,000
	1918	55,000	4,785,000	7,656,000

^a Pounds. ^b Tons.

TRANSPORTATION. The railway mileage of the State in 1919 was 3892. The roads having the longest mileage were the Baltimore & Ohio, and the Norfolk & Western. See CHILD LABOR.

FINANCE. According to the biennial report of the State Treasurer, the balance in all funds was \$5,088,976 on June 30, 1917, and a year later it was \$8,672,820. The following table shows the receipts and disbursements for this interval:

Fund	Receipts	Disbursements
General Revenue	\$3,677,272	\$3,054,466
Special Revenue	1,641,650	966,294
Refunding local taxes.	4,067,326	4,044,955
General School	768,177	792,266
The School Fund	131,500	170,000
State Road Fund	492,439	68,847
Workmen's Compensation.	3,144,112	3,043,055
Total	\$13,922,479	\$12,139,885

CHARITIES AND CORRECTIONS. The following institutions are under the control of the State Board of Control: Hospitals, at Weston, Spencer, Huntington, Welch, McKendree, Fairmont; penitentiary, Moundsville; industrial school for boys, Grafton; industrial home for girls, Industrial; school for the deaf and the blind, Romney; tuberculosis sanatorium, Terra Alta; colored tuberculosis sanatorium, Denmar; children's home, Elkins; colored orphans' home, Huntington.

OFFICERS. Governor, John J. Cornwell; Secretary of State, Houston G. Young; Treasurer, W. S. Johnson; Auditor, John S. Darst; Attorney-General, E. T. England.

WEST VIRGINIA, UNIVERSITY OF. A State institution of learning, at Morgantown, W. Va. In the fall of 1919 there were 1477 students and about 125 members of the faculty. The enrollment for the summer session of 1919 was 639. The library contains 67,000. During 1919 there was constructed an Agricultural Building, and Ogleby Hall, a woman's dormitory. Endowment, \$115,000. The university was founded in 1867. President, Frank Butler Trotter, LL.D.

WEYL, WALTER EDWARD. Economist and publicist, died November 9. He was born at Philadelphia, Mar. 11, 1873, graduated at the University of Pennsylvania in 1892 and pursued graduate studies there and at German universities and in Paris. He was engaged in statistical work for the government from 1898 to 1900, serving under the United States Department of Labor, in investigations in Europe, and later in Mexico and Porto Rico, and he was statistical expert on internal commerce for the Bureau of Statistics in the Treasury. He was also an associate editor of the *New Republic*. His best known book was *The New Democracy*, (1912). He wrote also *American World Policies*, (1917), and a number of bulletins for the United States Department of Labor.

WHEAT. While in 1919 a marked improvement in the world's wheat situation over that of the preceding year took place, a shortage of supplies especially during the earlier part of the year continued to exist in many European countries as the result of reduced production and uneven international distribution brought about by the war of nations. The world's production in 1919 as indicated by the returns reported for some of the principal wheat producing countries was not very large. The total production of 12 countries in the northern hemisphere was reported by the International Institute of Agriculture, Rome, as approximately 1,977,000,000 bushels, a quantity smaller by 6.5 per cent than that produced by these countries in 1918 and lower by 3.5 per cent than their average production from 1913 to 1917, inclusive.

Data regarding wheat production by countries continued incomplete and the quantity reported represented only about 55 per cent of the world's normal output. The yields reported for some of the principal wheat growing countries were as follows: Spain 132,196,000, France 172,440,000, Italy 164,287,000, Rumania 49,175,000, British India 271,357,000 and Canada 187,663,000 bushels. The wheat crop of Argentina, ready for the world's market early in 1919, was provisionally estimated at 184,268,000 bushels.

The United States as estimated by the Department of Agriculture produced 940,987,000 bushels on 73,243,000 acres or at the rather low rate of 12.8 bushels per acre. In 1918 the average yield per acre was 15.6 bushels and the average rate for the five years 1913 to 1917 was 15.1 bushels. The acreage was by far the largest ever recorded and the production was second only to the billion bushel crop of 1915. The average farm value on Dec. 1, 1919 was given as 215 6 cents per bushel and the total value of the crop on this basis as \$2,028,522,000, both the price per bushel and the total value representing record figures. As compared with 1918 the area of wheat harvested in 1919 was greater by 14,062,000 acres and the production greater by 19,549,000 bushels and as compared with the five-year average for 1913-1917 the increases were 20,923,000 acres and 150,353,000 bushels respectively. The total value in 1919 was \$1,082,685,000 above the five-year average. Of the area in wheat this year 49,905,000 acres were winter wheat and 23,338,000 acres were spring wheat. The production of winter wheat was 731,636,000 bushels and that of spring wheat 209,351,000 bushels while the average yields per acre were 14.7 bushels and nine bushels respectively. The low average yields were due to a late and cold spring followed by a period of drouth, especially over the greater portion of the spring wheat region. In parts of the spring wheat region the crop was injured also by diseases particularly scab and rust. The area sown to winter wheat in the fall of this year for the 1920 crop was reported as 38,770,000 acres or 76.8 per cent of the area sown in the fall of 1918. This reduction was made in anticipation of lower demands for wheat and wheat flour as a result of progress in the recovery of the culture of the crop in Europe and of international trade.

The principal governments of the world continued to exercise control over the consumption of and trade in wheat including official fixation of prices. This control during the year was largely confined to wheat, the markets for other

cereals being largely free. Ocean freight rates for wheat were also still subject to government control and such rates were from four to six times the rates of 1913. The price of wheat per bushel in the principal exporting countries was as follows: Australia \$1.14, Argentina \$1.55, Canada \$2.245 and the United States, No. 1 Northern Spring Wheat at New York, \$2.395. Broomhall's *Corn Trade News* estimated the requirements of wheat for 1919-20 by the principal importing countries at 768,000,000 bushels all excepting 40,000,000 bushels being required by Europe.

The United Kingdom according to this estimate required imports of 196,000,000 bushels for its normal consumption, France 128,000,000 bushels, Italy 88,000,000 bushels, Belgium 56,000,000 bushels, Holland, Switzerland and Scandinavia 40,000,000 bushels, Spain and Greece each 12,000,000 bushels, Portugal 4,000,000 bushels, Germany 120,000,000 bushels, and Austria, Hungary and Czechoslovakia 72,000,000 bushels.

Among the results of studies with wheat published during the year may be mentioned the data on the cost of production obtained by the Missouri Agricultural Experiment Station. Observations made from 1910 to 1917 inclusive showed that the average cost of a bushel of wheat in the sack at the farm was \$1.06 and that the different crops had paid the farmer an average of \$2.33 for every 10 hours of labor spent on them. A disease long known in Europe and caused by a nematode, or eelworm caused damage during the past year in certain parts of the United States, particularly in Virginia and in isolated localities of West Virginia, Maryland, Georgia, and California.

WHISKEY. See LIQUORS.

WHITE, HENRY. American representative at the Paris Peace Conference. He was a well-known American diplomat of long experience. He had entered the diplomatic service in 1883, was secretary of embassy in Vienna and in London, and from 1897-1905 was first secretary and often acted as chargé d'affaires. He was appointed ambassador to Italy, 1905, ambassador to Paris, 1907, retiring in 1909. He was a close friend of the late Colonel Roosevelt, by whom he had been appointed to both these embassies. In 1906 he had been the American representative at the conference of Algiers. He was regarded as the most experienced American diplomatist and as probably knowing more foreign statesmen than any other American.

WHITLEY COUNCIL. See ARBITRATION AND CONCILIATION.

WIDOWS AND ORPHANS INSURANCE. See SOCIAL INSURANCE.

WIECHMANN, FERDINAND GERHARD. Chemist, died in 1919. He was born at Brooklyn, N. Y., Nov. 12, 1858, and studied at the School of Mines, Columbia University. He taught and lectured on chemistry for a number of years and was consulting research chemist from 1883 to the time of his death in the City of New York. He was author of the following books: *Sugar Analysis* (1890), 3d edition, 1914; *Lecture Notes on Theoretical Chemistry* (1893), 2d edition (1895); *Chemistry—Its Evolution and Achievements* (1899); *Maid of Montauk* (under pen name of Forest Monroe), (1902); *Notes on Electrochemistry* (1906).

WILCOX, ELLA WHEELER. American author

and poetess, died at Branford, Conn., October 30. Her illness of several months' duration dated from a nervous breakdown while engaged in war relief work abroad. She was born near Madison, Wis., in 1855. Her family not being well off, she began at an early age to write for the press to supplement her needs. Her poems found acceptance after she was 15 years old, and she produced rapidly and acquired a considerable popular reputation during 40 years of industrious activity. Her poems appeared in many magazines and newspapers. The collection entitled *Poems of Passion*, published in 1883, provoked criticism and ridicule, but greatly extended the writer's reputation. After the death of her husband, Mr. Robert M. Wilcox, May 21, 1916, she gave much attention to spiritualism, and believed that she was in communication with his spirit. During the war she worked with great self devotion under the Red Cross in France, delivering lectures to the soldiers. Among her writings were the following: *An Ambitious Man; A Double Life; Drops of Water; Sweet Danger; Was it Suicide?; Everyday Thoughts; Poems of Passion; Maurine; Poems of Pleasure; Three Women; Kingdom of Love, and Other Poems; An Erring Woman's Love; Men, Women and Emotions; The Beautiful Land of Nod; Poems of Power; Around the Year with Ella Wheeler Wilcox* (birthday book); *A Woman of the World*, (1904); *Poems of Sentiment*, (1906); *New Thought Common Sense; and What Life Means to Me; The Love Sonnets of Abelard and Heloise; Poems of Progress and New Thought Pastels*, (1909); *Sailing Sunny Seas*, (1910); *Gems*, (1912); *Picked Poems*, (1912); *Woman of the World*, (1912); *Art of Being Alive*, (1914); *Cameos*, (1914); *Historical Mother Goose*, (1914); *Poems of Problems*, (1914); *Lest We Forget*, (1915); *World Voices*, (1916); *The World and I*, (an autobiography, 1918).

WILLIAM AND MARY, COLLEGE OF. A co-educational state institution, at Williamsburg, Va. The enrollment for the summer session of 1919 was 60; in the fall there were 207 men and 80 women; the faculty numbered 18. For the first time in its history, the college this fall offered courses in Commerce, Business Administration, Business Law, Accounting, etc. The endowment fund is \$152,000; the income for the year was \$85,057. Number of volumes in the library, 18,000. William and Mary was founded in 1693. President, Dr. J. A. C. Chandler.

WILLIAMS, ARTHUR LLEWELLYN. Bishop, died at Omaha, Neb., January 28. He was born in Ontario, Canada, Jan. 30, 1856, and graduated at the Western Theological Seminary in Chicago, 1888. From 1888 to 1891, he was a missionary in Colorado, after which he was a rector at Denver and in Chicago. In 1899 he was consecrated coadjutor bishop of Nebraska and he became bishop of Nebraska in 1908.

WILLIAMS COLLEGE. A non-sectarian institution for the education of men, founded in 1793 at Williamstown, Mass. In the fall of 1919 the enrollment was 557, with 59 members in the faculty. Productive funds amount to \$3,051,082 and the income for the year was \$273,985. The library contains 92,000 volumes. President, Harry Augustus Garfield, LL.D.

WILMINGTON, DEL. See DOCKS AND HARBORS.

WILSON, WOODROW. See UNITED STATES, and WAR OF THE NATIONS.

WILSON, JOHN MOULDER. Brigadier general, died at Washington, D. C., February 1st. He was born in Washington, D. C., Oct. 8, 1837, and graduated at the United States Military Academy in 1860. He served throughout the Civil War and distinguished himself in several battles. The Congressional medal of honor was awarded him for most distinguished gallantry during the battle of Malvern Hill on Aug. 6, 1862. He was engaged in many engineering works after the war, including the completion of the Washington Monument. He was Superintendent of the United States Military Academy from 1889 to 1893, and twice held the position of superintendent of public buildings and grounds at Washington. He retired at his own request after 40 years of service, Apr. 30, 1901.

WILSON DAM. See DAMS.

WINDWARD ISLANDS. The group consisting of Grenada, St. Vincent, and St. Lucia, together with the Grenadines, which are half under St. Vincent and half under Grenada; forming the eastern limit of the Caribbean Sea. They have a common court of appeal and are united for certain other purposes, but each island has its own administration. Governor and commander-in-chief, at the beginning of 1919, Sir G. B. Haddon-Smith.

WINE. See LIQUORS.

WINNIPEG. See AQUEDUCTS; CANADA; STRIKES AND LOCKOUTS; and WATER-WORKS.

WIRELESS TELEGRAPHY AND TELEPHONY. During the year, many devices that had been developed under the stress of war were given trials as concerned their peace-time utility, and the inventors whose ingenuity and skill had contributed to the successful conclusion of the war were free to devote their energies to the more deliberate development of many useful kinds of apparatus. Additional researches were being conducted along the lines pointed out by Roy A. Weagant in connection with his discovery of the means for eliminating static disturbances that interfered so seriously at times with radio communication over long distances that gave promise of greatly improved transmission. At the end of the year it was expected that the war-time restrictions on public radio messages, as well as on communication by amateurs' stations would be entirely removed. The great transmitting station at New Brunswick, N. J., was about to be employed in regular service, and it was from this station that a notably successful experiment was undertaken by transmitting a radio-telephonic communication to President Wilson when he was on board the *George Washington*, 3200 miles at sea. The year's progress in radio-telephony was marked by many successful trials of this character, including those dealing with communication between airplanes. The practical commercial limits of wireless telephony were increased to a considerable degree, and further promising experiments were being tried at the close of the year.

WISCONSIN. POPULATION. The population of the State in 1910 was 2,333,830, and on July 1, 1919 it was estimated to be 2,580,800, a gain during the last 12 months of approximately 27,000.

AGRICULTURE. The following table is com-

piled from a report of the Federal Department of Agriculture, for December, 1919.

Crop	Year	Acreage	Prod. Bu.	Value
Corn ...	1919	1,820,000	85,540,000	\$106,925,000
	1918	1,710,000	68,742,000	89,365,000
Oats .	1919	2,389,000	78,128,000	54,686,000
	1918	2,378,000	110,815,000	74,246,000
Wheat ..	1919	549,000	7,355,000	15,814,000

a Pounds b Tons.

See OLD AGE PENSIONS.

TRANSPORTATION. The total railway mileage for the State in 1919 was about 7632. The roads having the longest mileage were the Chicago and Northwestern, the Chicago, Milwaukee, & St. Paul, and the Minneapolis, St. Paul, and Sault Ste. Marie.

FINANCE. The receipts for the year ending July 1, 1918, amounted to \$22,560,024, while the disbursements were \$21,091,645. The balance at the beginning of the year was \$3,602,184 and at the end of the period it was \$5,070,562. The State bonded debt amounts to \$1,951,000.

EDUCATION. From the report of the State Superintendent for the biennium ending in 1918, the following data are gleaned: The school census for 1917-18 showed 804,212 children between the ages of 4 and 20; 363,455 between 7 and 14; and 96,033 between the ages of 14 and 16. The total enrollment for all schools, including parochial schools, was in this period, 540,217, or 67 per cent of the census. Of this figure 458,950 were enrolled in public schools. The average daily attendance in 1917-18 was 356,829, with an average school year of 177.6 days. There were 16,910 professional educational workers in the State in this year, and of these, 16,464 were teachers. The mean average salary for teachers was approximately \$59 per month. The financial statistics are divided among counties and cities, the total expenditure of the former in 1917-18 being \$11,361,696, and the receipts amounting to \$14,015,332; the expenditure for cities, \$10,024,094, and the receipts \$10,345,291.

CHARITIES AND CORRECTIONS. According to the monthly census taken in October, 1919, the State institutions contain 12,233 inmates. This is an increase over the figures for Oct. 1, 1918. Insane institutions in the State have a population of 1374, while the county institutions contain 6837. A decrease of 39 in penal institutions and an increase of 64 in county tuberculosis institutions are shown. There are 2786 persons on parole, a decrease of 246 from 1918. Probationers from reform schools number 220. The Milwaukee Hospital for the Insane houses 594, while the State Hospital for the Insane has 1270 inmates.

State institutions under the supervision of the Board of Control, with location, are as follows: Hospital for the Insane, Mendota; Northern Hospital for the Insane, Winnebago; School for the Deaf, Delavan; School for the Blind, Janesville; Industrial School for Boys, Wau-

kesha; Prison, Waupun; Home for Feeble Minded, Chippewa Falls; Reformatory, Green Bay; Tuberculosis Sanatorium, Statesan; Central Hospital for the Insane, Waupun; Industrial Home for Women, Taycheedah; Southern Home for the Feeble Minded, Union Grove; Tomahawk Lake Camp, Tomahawk Lake; Workshop for the Blind, Milwaukee; Industrial School for Girls, Milwaukee.

LEGISLATION. In addition to the regular session of the State Legislature, the Governor late in the summer called a special session, the chief purpose of which was to pass legislation giving soldiers a bonus. This law, held constitutional by the Supreme Court of the State in November, provides for the payment of \$10 per month for each month of service; the fund to be administered by a service recognition board. This original act was submitted to the people and adopted at a special election. The special session then supplemented this with the soldiers' educational bonus law. This latter act helps soldiers, sailors, marines, and nurses who were in service for at least three months, to complete or continue their education by the payment of \$30 per month to each one regularly attending some school or educational institution. This act is administered by the board of education. Other important legislation of the year was as follows: *Labor*; a law was passed exempting labor, agricultural, and horticultural organizations instituted for purposes of mutual help, and not having a capital stock or conducted for profit, from the anti-trust laws. It gives to labor unions the right to organize, and outlines the procedure for and use of injunctions. Ch. 530 creates a State board of conciliation. When there is a dispute between an employer of more than 25 persons in a common employment, and his employees, the employer, or any number of such employees more than half the total number, may request the board to investigate and report on what is a fair and just wage. If the dispute involves a public service corporation, then the board shall investigate and report to the State railroad commission which shall complete the action. The Board consists of three members, one a skilled employee not having employing or discharging power, one an employee, and one a member having general knowledge of labor and manufacturing conditions; appointed by the Governor with the consent of the Senate. *Rural Planning.* Within the State Board of Agriculture there is erected a division of rural planning. Each county is to have a county rural planning committee. *Prohibition.* Ch. 556 prohibits the manufacture, sale, or transportation of intoxicating liquors containing more than 2½ per cent alcohol, unless otherwise defined by the Federal government, and creates the office of State Prohibition Commissioner to enforce the law. There was created a *Marketing Division* to improve marketing conditions, and to standardize and grade farm products, with power to investigate costs; the director appointed by a board and removable by joint resolution of the Legislature. In addition, a "blue sky" law was passed, providing for the licensing and regulation of dealers in stocks and bonds; a real estate brokers' board with power to license such brokers; a land settlement board to cooperate with the Federal government; public health nurses are to be employed by every county board of supervisors to act as health supervisors for all schools, etc., and to investigate

infringement of child labor laws. A constitutional amendment prescribing by law the compensation of legislators has now passed two successive Legislatures, and will be submitted for popular ratification in April, 1920. An eight hour bill failed by one vote to pass the house of its origin. A bill raising the age of compulsory attendance at continuation schools to 18 years, was vetoed by the Governor.

OFFICERS. Governor, Emanuel L. Philipp; Lieutenant-Governor, Edward F. Dithmar; Secretary of State, Merlin Hull; Treasurer, Henry Johnson; Attorney-General, John J. Blaine.

JUDICIARY. Supreme Court: Chief Justice, John B. Winslow; Associate Justices, Robert G. Siebecker, James C. Kerwin, Aad J. Vinje, Marvin B. Rosenberry, Franz C. Eschweiler, Walter C. Owen; Clerk, Arthur A. McLeod.

WISCONSIN, UNIVERSITY OF. A co-educational State institution, founded in 1848, at Madison, Wis. The enrollment in the summer session of 1919 was 3212, of which number 1367 were men and 1845 women. In the fall there were 6872 students and 834 members in the faculty, an increase of 152 in the latter. The State and Federal endowment amounts to \$26,330, while the total income for the year (including the above), was \$3,532,305. The university libraries contain 311,600 volumes, while the Historical Library, open to the use of the university, contains 208,000 volumes. In 1919 a new Student Infirmary, the Braley Memorial Hospital, and an addition to the Soils Building, were constructed. Late in the fall, announcement was made that Dr. Edward A. Birge, since November, 1918, temporary president, had accepted the request of the Board of Regents to become president.

WISE, OTTO IRVING. Lawyer, died January 23. He was born in Vienna, Austria, Dec. 5, 1871; was brought to America when a child; studied at the College of the City of New York and the New York University; was admitted to the bar in New York, and practiced there for some time, but removed to San Francisco where he became the counsel or director of many important corporations. He was one of the directors of the Federation of Jewish Charities.

WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL. The forty-sixth annual meeting of this society was held in St. Louis in November, 1919, and was considered one of the most successful in its history. The W. C. T. U. has been very active in securing the ratification of the prohibition amendment to the Constitution of the United States, so that the meeting was marked by much exultation on the part of the members for the success of their labors. Speakers tried to impress the delegates, however, with the fact that their work is not yet over, but that they must see to enforcement, with the passing of enforcement laws if necessary, and then turn their thoughts to world-wide prohibition. One of the amusing incidents of the convention was the invitation of August Busch of the Anheuser-Busch Co. to inspect his Bevo plant though he carefully explained that "said invitation was not on any account to be interpreted as indicating a change of heart on my part on the question of prohibition." Extensive plans were made for educational work here and in foreign countries, and for improving the conditions of morality in this country. Special emphasis was laid on the work among

women in industry, and a committee was appointed to conduct the work in this field. A Million Dollar Jubilee Fund was instituted to be completed before Jan. 16, 1920, of which \$300,000 will be devoted to world prohibition with centres in China, Japan, India, Argentina, Peru, Ceylon, and Mexico; \$200,000 will be devoted to the Americanization of foreigners in this country; \$150,000 will be devoted to child welfare work; \$100,000 will be devoted to the improvement of health and morality in this country, and \$50,000 will be devoted to education and information. The Investigating Committee on Women in Industry will also draw on this fund. The convention recommended to churches that Jan. 11, 1920, be constituted the "National Constitutional Prohibition Day," with special sermons on the text "Righteousness exalteth a nation"; that January 15th be recognized by a "Victory Watch Meeting"; and that January 16th be constituted a "Day of Prayer." Members were urged to attend the World's W. C. T. U. Convention in London to be held in April, 1920. It is expected that a large number will attend the convention. Reports were received from the various committees showing that work during the past year had progressed in a very encouraging way. Officers elected at the meeting were as follows: President, Miss Anna A. Gordon; vice-president-at-large, Mrs. Ella A. Boole; corresponding secretary, Mrs. Frances P. Parks; treasurer, Mrs. Margaret C. Munns. Headquarters are maintained in Evanston, Ill.

WOMAN'S RELIEF CORPS. The first organization of women to have war relief as one of its objects, it came into existence to meet the need of the Grand Army of the Republic for assistance in caring for needy comrades and their dependents, and is the only recognized auxiliary of that organization. The first societies were formed in 1879, and work was taken up in various States, but all working independently. In 1883, Commander-in-Chief Paul Van der Voort, of the G. A. R., invited the different associations to meet in Denver, with the result that a national organization was effected, bearing the name of the "Woman's Relief Corps, Auxiliary to the Grand Army of the Republic." The objects of the organization are to assist the G. A. R. in caring for their comrades and dependent ones; to perpetuate the memory of their heroic dead; to cherish and emulate the deeds of the army nurses and all loyal women who rendered service to our country in her hour of peril; to maintain true allegiance to the United States of America; to inculcate lessons of patriotism, and encourage the spread of universal liberty and equal rights to all. It was the first society to introduce patriotic work. Thousands of flags have been presented and patriotic literature distributed in many communities.

The Thirty-Seventh National Convention, the largest in the history of the organization, was held in Columbus, Ohio, on Sept. 7-13, 1919. Reports showed that membership was at that time about 51,800; that \$44,118 was spent during the year in patriotic work; \$17,000 in war relief work; \$37,682 by individuals, and \$25,000 by circles for liberty bonds; 6118 flags were distributed; 2038 schools visited, and 217,736 pupils in the United States took part in Memorial Day exercises. The national officers elected at this convention were: President, Mrs. Abbie Lynch; secretary, Mrs. Eliza Brown-Daggett;

treasurer, Mrs. Estella E. Plapper. Headquarters are maintained in Columbus, Ohio.

WOMAN SUFFRAGE. The importance of the part played by women in the war was so generally recognized by the statesmen and politicians of the belligerent countries that the movement for political equality has met with great success in the last two years. In the past year the work done by women has received less prominence than it did during the war, but the movement for equal suffrage rights has made considerable progress.

UNITED STATES. During 1919 no states secured full suffrage for women by amendment to their State constitutions but a number gained partial suffrage by statute. At the beginning of the year, 16 States, and Alaska, had full suffrage for women. These States are: Wyoming 1869; Colorado 1893; Idaho and Utah, 1896; Washington 1910; California 1911; Arizona, Kansas and Oregon, 1912; Alaska 1913; Montana and Nevada, 1914; New York 1917, and Oklahoma, South Dakota and Michigan, 1918. As early as 1838 Kentucky gave school suffrage to certain classes of women and there are few States which do not have at least this degree of women suffrage to-day. In 1917 and 1918 respectively Arkansas and Texas granted women the right to vote at the primaries.

In accordance with the provision in the Federal Constitution, that the State legislatures shall determine the method of choosing presidential electors, the legislature of the State of Illinois in 1913 gave the women of that State the right to vote at presidential elections and by the same act also gave them the right to vote for all local officials not specifically mentioned in the suffrage provisions of the State Constitution. In 1917 North Dakota and Nebraska passed suffrage laws much like those of Illinois. Rhode Island passed a law conferring suffrage at presidential elections alone and Vermont enacted a state-wide municipal suffrage law. In 1919 the following States were added to those having presidential suffrage: Tennessee, Indiana, Iowa, Maine, Minnesota, Missouri, Wisconsin and Ohio. The Vermont Legislature also passed a presidential suffrage bill, but the Governor vetoed it.

FEDERAL AMENDMENT. The greatest achievement of the year was the passing of the suffrage amendment to the Federal Constitution by Congress. The vital section of the amendment is: "the right of citizens of the United States to vote shall not be denied or abridged by the United States or any State on account of sex." Senator A. A. Sargent of California first introduced this amendment in 1876. It was reported favorably from committee in the Senate several times, the first time being in 1882 and the last in 1917. In 1878 it was reported unfavorably. It was reported by favorable majorities in the House in 1883 and 1890; and by adverse majorities in 1884, 1886 and 1894. On January 3d the Suffrage Committee of the House again reported it favorably.

The amendment gradually gained favor in both Houses. In January, 1918, the proposal received the required two-thirds in the House. It failed to pass only because it lacked two votes of the necessary two-thirds in the Senate. This situation aroused much discussion and agitation for the adoption of the amendment. The President, as Commander-in-chief of the

army and navy personally urged the Senate to pass the amendment as a war measure, but his effort was in vain. However, the movement was helped through the State Political Party Conventions. In 15 States both Republican and Democratic State Conventions approved the Federal Amendment. In 16 other States the Amendment was approved by either Democratic or Republican Conventions. Early in the summer Congress voted on the measure and passed it by the two-thirds vote required for a constitutional amendment; the House on May 21st by a vote of 304 yeas to 89 nays, and the Senate on June 4th by a vote of 56 yeas to 25 nays. Ratification by 36 State Legislatures is required and by the end of 1919, 22 had already ratified as follows: Illinois, Wisconsin, Michigan, Kansas, New York, Ohio, Pennsylvania, Massachusetts, Texas, Iowa, Missouri, Arkansas, Montana, Nebraska, Minnesota, New Hampshire, Utah, California, Maine, North Dakota, South Dakota, and Colorado. On Jan. 6, 1920, the Federal Woman Suffrage Amendment was ratified by Rhode Island and Kentucky, bringing the total number of States which have ratified to 24.

ORGANIZATION. The success of the woman suffrage movement in the United States is largely the result of the organizations created for furthering the cause. The most important organization is the National American Woman Suffrage Association. It is a branch of the International Woman Suffrage Alliance and of the National Council of Women. Its headquarters are at 171 Madison Avenue, New York City, and its President is Mrs. Carrie Chapman Catt. The *Woman Citizen*, the association's publication, is a weekly which was established June 2, 1917, and succeeded the *Woman's Journal*. The National Woman's Party, another powerful organization, has branches in 10 States and its headquarters at 14 Jackson Place, Washington, D. C. This organization seeks to secure the adoption of an amendment to the Federal Constitution, enfranchising women. In 1918 some of its members picketed the White House and thereby attracted considerable attention. They were arrested but the Court of Appeals of the District of Columbia held their activities to be lawful. There have been demonstrations by women against the President both in Washington and Boston during the year and those participating were arrested and released later on.

ABROAD. The effect of the war on the woman suffrage movement abroad has been very marked. The following countries had already granted full suffrage in 1918: Austria, Canada, Czechoslovakia, Great Britain (including Scotland and Wales), Germany, Guanajuato (Mexico), Holland, Hungary, Ireland, and Poland. In 1919 the following countries also granted full suffrage: East Africa Protectorate, Rhodesia, Serbia, and Sweden. In England the law enfranchising women at least 30 years old, had been passed early in February, 1918, but the government officials declared that the law did not permit women to be elected to seats in Parliament. This situation was only temporary for an act was passed granting women the right to sit in Parliament and in December Lady Astor was elected to the House of Commons. In Belgium, France, and Italy, the movement is making rapid progress and in Italy, on September 4th, following a speech by Premier Nitti, the Chamber of Deputies passed a bill giving the Italian women

the right of suffrage by a vote of 174 yeas to 55 nays.

WOMEN IN INDUSTRY. Each year, in every industrial country in the world, there is coming to be a clearer appreciation of the problems presented by the employment of women in industry. The war served to accentuate these problems, for during that period great numbers of women were called upon to fill positions formerly occupied by men, and often the work was of a nature that had formerly been considered unsuitable for women. It has been generally recognized for some time that women, because of their physical characteristics, and because of their functions of motherhood and home-building, must be protected by special legislation when they enter the field of industry. The new and often arduous occupations which they assumed under war pressure made such legislation doubly imperative. Practically every industrial country in the world to-day has special laws applying to working women, but these laws vary tremendously in form and efficiency. Existing legislation of this sort commonly takes the form of (1) attempts to prohibit women from working in mines (underground); (2) prohibition of industrial night work for women; (3) a limitation of the hours of the working day; (4) the establishment of minimum wages; (5) the prohibition of the employment at stated intervals before and after childbirth; (6) the compensation of women for loss of wages during the lying-in period. The stringency and effectiveness of these laws vary in different parts of the globe; thus, it may almost be said that Asia and Africa are the homes of the 11 and 12-hour working day for women, Europe of the 9½ and 10-hour day, America of the 9-hour day, and Australia and New Zealand of the 8-hour day. This falls far short of being an accurate appraisal, however, for the laws vary greatly, even in different parts of the same country.

The year 1919 witnessed a generally unsettled condition in this field due to enforced readjustment occasioned by the return of discharged soldiers to positions occupied by women who had taken their places when they were called into service, had filled them satisfactorily, and were unwilling to resign them. At the end of the year this readjustment was still in process, and more than one case of open friction was reported. (See also: CHILD LABOR, LABOR LEGISLATION, MINIMUM WAGE, and SOCIAL INSURANCE.)

The past year is also noteworthy in that it witnessed an international consideration of problems relating to the employment of women. Since no express provision was made for women delegates to the First International Labor Conference (See RECONSTRUCTION) held in Washington, D. C., under the provisions of the Treaty of Peace, the National Women's Trade Union League called an international congress of working-women which convened in Washington on Oct. 28, 1919, immediately before the Labor Conference. It was announced that consideration would be given to, and recommendations formulated on, problems relating to the employment and working conditions of women and children. Delegates were present to represent, and to tell of conditions in, Argentina, Belgium, Canada, Czechoslovakia, Great Britain, Denmark, France, India, Italy, Norway, Poland, Sweden, and the United States. Women from Cuba, Holland, Japan, Serbia, Spain, and Switzerland

also were in attendance, as well as representatives of important social groups within the United States. The reports were carefully discussed, and recommendations were formulated for presentation to the International Labor Conference of the League of Nations which was held in Washington from October 29th to November 29th. The Women's Congress adjourned on November 6th.

The recommendations of the Women's Congress exercised an important influence in shaping the "draft conventions" of the International Labor Conference. Two of these conventions, numbered V and VI respectively, which deal specifically with women in industry, are:

V Article 3. In any public or private industrial or commercial undertaking, or in any branch thereof, other than an undertaking in which only members of the same family are employed, a woman

(a) Shall not be permitted to work during the six weeks following her confinement.

(b) Shall have the right to leave her work if she produces a medical certificate stating that her confinement will probably take place within six weeks.

(c) Shall, while she is absent from her work in pursuance of paragraphs (a) and (b), be paid benefits sufficient for the full and healthy maintenance of herself and her child, provided either out of public funds or by means of a system of insurance, the exact amount of which shall be determined by the competent authority in each country, and, as an additional benefit, shall be entitled to free attendance by a doctor or certified midwife. No mistake of the medical adviser in estimating the date of the confinement shall preclude a woman from receiving these benefits from the date of the medical certificate up to the date on which the confinement actually takes place.

(d) Shall, in any case, if she is nursing her child, be allowed half an hour twice a day during her working hours for this purpose.

VI. Article 2. For the purpose of this Convention, the term "night" signifies a period of at least eleven consecutive hours, including the interval between 10 o'clock in the evening and 5 o'clock in the morning.

Article 3. Women, without distinction of age, shall not be employed during the night in any public or private industrial undertaking, or in any branch thereof, other than an undertaking in which only members of the same families are employed.

Article 4. Article 3 shall not apply

(a) In cases of *force majeure*, when in any undertaking there occurs an interruption of work which it was impossible to foresee, and which is not of a recurring character.

(b) In cases where the work has to do with raw materials or materials in the course of treatment which are subject to rapid deterioration, when such work is necessary to preserve the said materials from certain loss.

Article 6. In industrial undertakings which are influenced by the seasons, and in all cases where exceptional circumstances demand it, the night period may be reduced to ten hours on sixty days of the year.

Article 7. In countries where the climate renders work by day particularly trying to the health, the night period may be shorter than prescribed in the above articles, provided that compensatory rest is accorded during the day.

Article 12. Each member which ratifies this Convention agrees to bring its provisions into operation not later than 1st July, 1922, and to take such action as may be necessary to make these provisions effective.

THE UNITED STATES. Although the war affected American industrial workers less than those of countries that were fighting for a longer period, still women were called upon throughout the United States to fill the places of men who had been called into the army. The War Labor Board (q.v.) estimated that there were over 1,500,000 women engaged in essential war industries alone at the time of the signing of the armistice. A great part of this working force was not composed of women entering the field of industrial employment for the first time, for

there was a notable shifting of women from domestic service, teaching, and other occupations into work more intimately related to the war. At the same time, however, many wives and mothers of soldiers were forced by economic pressure into industry for the first time. The census of 1910 gave the number of women who were "gainfully employed" throughout the United States as approximately 8,000,000; there is no doubt that at the end of 1919 this number might be safely placed at well over 11,000,000. The return of discharged soldiers to positions which were being satisfactorily filled by women caused some friction, and on the whole there seems to be a tendency for women to remain in the industries in which they obtained a foothold during the war. Wages, for the most part, have remained substantially lower than those paid to men for the same services, although the past year has witnessed increasing agitation for the concession of "equal pay for equal work."

The entrance of women into new fields of industry made necessary the adoption of new legislation and the extension of old legislation to cover the new conditions. During 1919 *Utah* adopted an eight-hour law for women in private employment, making seven western States which, together with the *District of Columbia* and *Porto Rico*, now have this advanced standard. *North Dakota* limited women's work to eight and one-half hours a day and to six days and 48 hours a week. Existing limitations were extended to new classes of women in *Arkansas* (those engaged by employers hiring three or less), *California* (women elevator operators in office buildings), *Michigan* (women employed in theatres, hotels, and the like), *New York* (those operating elevators or employed on the traction systems), *Ohio* (elevator operators), and *Oklahoma* (all women except druggists, nurses, and those in agriculture or domestic service). *Massachusetts* reduced women's hours to nine a day and 48 a week. *Connecticut* closed a loophole in its night-work law for women by barring the entire period between 10 P. M. and 6 A. M. instead of from 10 P. M. to midnight as was the previous effect of the statute. On the other hand, *New York* excluded women reporters and news writers from the prohibition against night work, and *Vermont* authorized its commissioner of industries to suspend the hour limitations on woman and child labor for two months yearly for concerns handling perishable goods. *New York* restricted the employment of women on local traction lines and on elevators, setting a minimum age of 21 for the first and of 18 for the latter employment, and *Missouri* prohibited the employment in industry of women for three weeks before and three weeks after childbirth.

GREAT BRITAIN. It has been estimated that from July, 1914, to July, 1918, there have been approximately 1,200,000 "new entrants" of women into the field of industry, exclusive of the 400,000 women who came in from domestic service and small workshops. These women filled positions to which the demobilized army looked for employment, and to complicate matters further there were many agreements which the government had made with trade-unions which provided for the return of discharged soldiers to their former employment, as well as opening certain occupations to women for the period of the war only. The entire year was given over to an effort to straighten matters out, and at the end

of the year little real progress could be reported. The Women's Employment Committee of the British Ministry of Reconstruction has made an exhaustive study of conditions, and has submitted its recommendations, among the most important of which are the demands that local government clerical posts be opened to men and women alike; that in all industry the principle of "equal pay for equal output" be applied to both sexes; recommending the establishment of minimum wage rates and trade boards, and the adoption of a scheme of mother's pensions on the American model; sanctioning trade-unionism for women and, urging the government to aid them to organize, either separately or in unions made up of both men and women; the vocational training of women on a scale not hitherto attempted; the establishment of a 44-hour week with an annual two weeks' holiday with pay; and various extensive programmes of safety and health legislation and welfare work. An interesting sidelight of the movement is a demand on the part of the Women's Advisory Committee on Domestic Service (1919) that an extensive training system be inaugurated by the Department of Education in which "the training for houseworkers should be regarded in the same light as the training of any other skilled worker." Throughout Great Britain there is noted a marked inclination for women to remain in their new lines of endeavor, and a decided disinclination on their part to return to low-paid domestic service, laundry-work, etc.

OTHER COUNTRIES. On March 7, 1919, a decree was promulgated in *Belgium*, effective as law on October 1st, which regulated the employment of women and children. This law prohibits the employment of children under 14; and of young persons under 16 and females under 21 in occupations exceeding their strength or dangerous to their health or morals. It provides that women may not be employed for four weeks subsequent to childbirth, and night work for women is prohibited. Employers are required to keep data concerning the employment of both women and children, and to submit to government inspection.

Peru adopted an excellent Women's and Children's Labor Law on Nov. 25, 1918, embracing all occupations where women or children work for others, with the exception of domestic service and in agricultural work where no mechanical motors are used.

The *Japan Year Book* contains an interesting account of conditions of employment of women and girls in *Japan*. Summarizing: Female labor constitutes a main part in the factory economy of Japan. In 19,299 factories, employing not less than 10 operatives each, female labor constitutes 58 per cent of the working force. Of the total number of child workers under 15 years of age, 82 per cent are girls. Female workers in Japanese factories number some 500,000, of whom 300,000 are under 20 years of age. Of these, 400,000 are engaged in the spinning, weaving, and dyeing industries, and 70 per cent of them live in factory quarters, under what amounts to a system of confinement. Work in the raw silk factories lasts from 13 to 14 hours per day, and in the weaving mills from 14 to 16 hours. Night work is prevalent. The health of the women workers is quickly broken, the turnover being approximately 80 per cent in the course of a year. In factory quarters, day shifts

and night shifts make impartial use of the same beds, and tuberculosis is rife, the death rate from that disease amounting to 30 per 1000.

WOMEN'S CLUBS, GENERAL FEDERATION OF. The fifteenth biennial convention of this organization will be held in June, 1920, at Des Moines, Iowa. No reports have been received from the different divisions of the Federation since the last convention in April, 1918. The regular departments of the clubs are: Art, Mrs. C. E. Perkins, Michigan; Civics, Mrs. B. L. Prody, Michigan; Civil Service Reform, Mrs. C. F. Wood, District of Columbia; Conservation, Mrs. J. D. Sherman, Illinois; Education, Mrs. O. S. Baines, California; Home Economics, Mrs. C. W. Greene, Missouri; Industrial and Social Conditions, Mrs. J. D. Wilkinson, Louisiana; Legislation, Miss Mary Wood, New York; Literature and Library Extension, Mrs. Trueworthy-White, Mass.; Music, Mrs. W. D. Steele, Missouri; and Public Health, Mrs. E. Blair, New York. Special divisions of new work just formed are: Americanization, Mrs. T. G. Winkes, Minnesota, director; Community Service, Mrs. G. W. Plummer, Illinois, director; and Thrift, Miss Georgia A. Bacon, Mass., Director. The officers for 1918-20: President, Mrs. Josiah E. Cowles, Los Angeles, Cal.; first vice-president, Miss Georgia A. Bacon, Worcester, Mass.; second vice-president, Mrs. Thomas G. Winter, Minneapolis, Minn.; corresponding secretary, Mrs. Mary I. Wood, Portsmouth, N. H.; treasurer, Mrs. Benjamin B. Clark, Red Oak, Iowa; and auditor, Mrs. William P. Harper, Seattle, Wash. The official organ is *The General Federation Magazine*, Washington, D. C.

WOOD, DANIEL JOSEPH. A distinguished English organist, died at Exeter, August 27. He was born at Brompton, Kent, Aug. 25, 1849. From 1876 till his death he filled the post of organist at Exeter Cathedral, and also conducted several choral societies. He published sacred music and some works for organ.

WOOL. See **LIVE STOCK**.

WOOLEN MANUFACTURES. See **TEXTILE INDUSTRY**.

WOOLWORTH, FRANK W. American merchant, proprietor of the well-known Woolworth building, died, April 7, at Glencove, Long Island. He was born at Rodman, N. Y., April 13, 1852, educated at the public schools and a business college and began his career in Utica, N. Y., February, 1879, with a "Five cent Store" but removed in the same year to Lancaster, Pa., where he opened a similar store. After 10 years of remarkable industry he built up a chain of these five and 10 cent stores which steadily increased until shortly before his death there were reported to be over 1000 of them in the United States and Canada and about 75 in Great Britain. These were all controlled by the Woolworth corporation of which he was the president. He had begun his business career at the age of 27 with a capital of some \$300 and on his death he was the possessor of a vast fortune. The Woolworth building in which he took great pride as the highest in the world stands 792 feet high and its foundation has a depth of 120 feet. His corporation before his death was said to employ between 25,000 and 30,000 people.

WORCESTER FESTIVAL. See **MUSIC, Festivals**.

WORCESTER POLYTECHNIC INSTITUTE. A non-sectarian institution for theo-

retical and practical training for men, founded at Worcester, Mass., in 1865. Enrollment for summer practice, 1919, 268, for the fall, 567. There are 51 members of the faculty, three men, John B. Zinn, Chemistry, R. C. Joslin, Modern Languages, and S. J. Plimpton, Physics, being added in 1919. Productive funds, 1918-19, \$1,003,446; income therefrom, 1918-19, \$53,902. On July 1, 1919, there were 14,614 bound volumes and 2527 theses in the library. Gifts to the funds during the year totaled \$34,750. President, Ira Nelson Hollis.

WORKMEN'S COMPENSATION. Workmen's compensation is the most widely adopted of the social insurances (q.v.); statistics compiled in 1918 showed that in 82 states of the world there were in force special laws for the regulation of claims for compensation on the part of workers who have met with accidents. Most of this legislation has been passed within recent years, for in the year 1900 such provisions had been made in only nine states. It has become generally recognized that justice is not easily attained when the injured worker is forced to sue his employer for compensation in the courts of law, and that even when the employers' liability is definitely fixed, such procedure is exceedingly wasteful and inefficient. Figures compiled in the United States show that under employers' liability, only \$28 of each \$100 paid by employers to insurance companies for protection ever reached the injured workmen in form of damages or compensation. Accidents are the most spectacular of the mishaps occurring to workers, and the responsibility of them is comparatively easy to place. Perhaps these reasons account for the fact that workmen's compensation is the only form of social insurance that has been extensively adopted in the United States. The following summary of United States legislation is adapted from *The American Labor Legislation Review* for December, 1919.

UNITED STATES LEGISLATION FOR 1919. Employers' liability laws were extended in three States, and in Oregon it was made illegal for any person, including attorneys, to solicit any business dealing with personal injury claims, or for any person to solicit such business for an attorney. Four new workmen's compensation acts were passed, that of North Dakota being compulsory, and those of Alabama, Missouri, and Tennessee being elective. At the end of the year only six States in the Union were without this type of legislation; all of them belong to the Southern group—Arkansas, Georgia, Florida, Mississippi, North Carolina, and South Carolina. In more than 30 States and in Congress, existing compensation acts were amended, in most cases extending the scope of the act, increasing the scale of indemnity, reducing the waiting period, extending the provisions for medical care, making special arrangement for compensation for second injuries, or bringing private casualty companies doing workmen's compensation business under more careful control. Fourteen American compensation laws are now compulsory. Eight, including the new acts in Missouri and North Dakota, base compensation on 66⅔ per cent of wages, four on 65 per cent, 10 on 60 per cent, and four on 55 per cent. Connecticut and Wisconsin extended their laws to cover occupational disease; similar provision previously existed in California, Hawaii, Massa-

chusetts, and under the compensation law of the Federal government. Kansas, Missouri, and Ohio permitted blind persons to waive claims to compensation for injuries caused by their blindness, and Minnesota made it illegal to discriminate in insurance rates against the handicapped. Eight States made provision for vocational rehabilitation of industrial cripples, including acceptance, in some cases, of the terms of the Federal law enacted this year authorizing government aid to States conforming to certain standards. The Governor of Kansas was authorized to appoint a commission to draft workmen's compensation legislation.

NEW ACTS: ALABAMA. An elective workmen's compensation law is enacted providing compensation for accidental industrial injuries, unless caused by willful misconduct, intoxication, willful failure or refusal to use safety appliances provided, willful refusal or neglect to comply with the law, or willful breach of a reasonable rule or regulation of his employer of which the employee has knowledge. The act does not remove the defenses of employers of less than 16 workmen, counties, cities, towns, villages, school districts, domestic servants, farm or casual laborers, or common carriers in interstate commerce, but employers of fewer than 16 may come under its provisions. No compensation is to be paid for the first two weeks, unless the disability lasts for four weeks, in which case compensation is to be paid for the first two weeks also. Compensation is 50 per cent of the average earnings, limited to 300 weeks in case of temporary total disability, to 550 weeks in case of certain permanent total disabilities, to 400 weeks in case of all other permanent total disabilities, and to certain scheduled periods in case of dismemberment. There is a maximum of \$12 per week, which is reduced to \$5 after 400 weeks, and a weekly minimum of \$5, unless wages are less in which case compensation is equal to wages. The percentage of compensation is to be increased 5 per cent for each dependent child under 18 until it reaches 60 per cent, and the weekly maximum is to be increased \$1 for each child until it reaches \$15, but the total amount of the compensation is limited to \$5000. Death benefits and medical attention are also provided for. And the legal procedure for collecting benefits is outlined. Law effective Jan. 1, 1920.

MISSOURI. An elective compensation law is enacted applying to all public and private employments where five or more are engaged, except farm labor, domestic service, casual labor, outworkers in their own homes, employees earning more than \$3000 per year, officials and employees protected by the federal employers' liability law, but exempted employers may elect the act. It provides compensation for industrial injuries by accident not due to the employee's or another's willful misconduct, including intentional self-inflicted injuries, intoxication, or willful violation of safety laws or reasonable safety rules. For the first eight weeks of disability the employer must provide necessary medical aid not exceeding \$200. No cash compensation is to be paid for the first seven days unless disability lasts longer than six weeks, in which case compensation is to be paid from the date of injury. Compensation for total disability is two-thirds of wages. If the disability is temporary, compensation is limited to 400 weeks; if permanent, compensation is reduced to 40

per cent after 240 weeks. For temporary partial disability two-thirds of the loss in wage-earning capacity, but not more than \$12 per week, is payable for not more than 200 weeks. In case of death total dependents are to receive two-thirds of wages for not more than 300 weeks, and partial dependents proportionately less. The employer must pay for burial not exceeding \$100. There is a weekly maximum of \$15 and a weekly minimum of \$6, except where wages are less than \$6. Each employer is required to carry insurance unless he can satisfy the commission of his ability to pay any possible liability. A commission of four is appointed by the Governor to serve for six years at \$4000 a year, to administer the act. \$50,000 is appropriated for expenses of administration. Appeals from decisions of commission may be taken to the Circuit Court on Errors of Law, and further appeal may be taken in civil actions. In effect November, 1919.

NORTH DAKOTA. A compulsory workmen's compensation insurance law applying to all hazardous employments except agriculture, domestic service, and common carriers by steam, is enacted. All employers under the act are required to contribute in proportion to their accident hazards to a workmen's compensation fund. From this fund employees are to be furnished in case of injury all necessary medical, surgical, and hospital services and supplies. No compensation is to be paid unless disability lasts seven days, but if it does, compensation is to be paid from the date of injury. Compensation is to be 66⅔ per cent of wages during total disability. In case of permanent partial disability, it is to be paid for a period proportioned to the percentage of disability, considering the employee's age and occupation. The weekly maximum and minimum are \$20 and \$6 respectively, but compensation may not be more than wages. In death case the widow is to be allowed 35 per cent of wages until death or remarriage, and 10 per cent additional for each child under 18, but not more than 66⅔ per cent in all. A workmen's compensation bureau is established to administer the act, with powers necessary to conduct investigations. If compensation is denied on any "ground going to the basis of the claimant's right" an injured worker may within 30 days appeal to the district court. In effect, July 1, 1919.

TENNESSEE. An elective compensation law is enacted applying to all employments except casual, domestic, and farm labor, and interstate commerce, and excepting also coal mines, employers of less than 10, the State, counties, and municipal corporations. The defenses of the latter are not removed by the act, but they may accept its terms, and withdraw again on 30 days' notice. All personal injuries by accident are covered except those due to willful misconduct, intentional self-inflicted injury, intoxication, or willful failure to use safety appliances or perform a duty required by law. In case of injury, medical aid and appliances not exceeding \$100 in value must be allowed for 30 days. There is a waiting period of 14 days except when the disability lasts for six weeks. After the waiting period, 50 per cent of wages is to be paid for 300 weeks. If the injury causes permanent total disability the period is extended to 400 weeks, after which a maximum of \$5 a week is to be paid for another 150 weeks, so long

as the total is not more than \$5000. In death cases the widow is to receive 30 per cent of her husband's wages with 10 per cent additional for each child up to 50 per cent for 400 weeks. For both disability and death cases the compensation is to be not more than \$11 per week or less than \$5 per week unless actual wages are less. In all death cases \$100 is allowed for burial. Employer must carry insurance or satisfy commissioner that he is able to pay awards. Employers and workmen are to agree as to the amount of compensation due, and file a copy of the settlement with the bureau of workshop and factory inspection within 10 days. Disputes are to be decided in the County, Chancery, or Criminal Court, and appeals may be taken to the Circuit Court and thence to the Supreme Court. In effect, July 1, 1919.

JUDICIAL DECISIONS. During the year 1919 the last doubts as to the constitutionality of employers' liability and workmen's compensation legislation were dispelled. The decision which established their position beyond question was handed down by the Supreme Court in the "Arizona Employers' Liability Cases" (250 U. S. 400) on June 9th. This opinion states that "the Arizona Employers' Liability Law in respect of certain specified employments reasonably designated as inherently hazardous and dangerous to workmen, imposes upon the employer, without regard to his fault or that of any person for whose conduct he is responsible, liability in compensatory (not speculative or punitive) damages for accidental personal injury or death of any employee arising out of and in the course of the employment and due to a condition or conditions of occupation, but not caused by the employee's own negligence. HELD, that it does not infringe the rights of the employers under the Fourteenth Amendment." The decision was handed down by Mr. Justice Pitney, and there was a concurring opinion by Mr. Justice Holmes which presented additional reasons for the law's constitutionality. This decision carried judicial statement on the subject further than it has been carried before, it being declared that the employer could be held responsible for accidents when he was in no way at fault, and that he could then add the costs of such accidents to the price of the finished commodity so that in the end the public would pay for mutilation as one of the legitimate costs of production. A dissenting opinion was delivered by Mr. Justice McKenna, in which the Chief Justice, and Justices Van Devanter and McReynolds concurred.

BRAZIL. A system of workmen's compensation was introduced in Brazil by an Official Decree of Jan. 15, 1919; this decree became effective one month later, February 15th. The act is of a compulsory nature, and does not preclude criminal procedure in cases involving such action at common law. In fatal cases, compensation under the law amounts to \$25 for funeral expenses, and a lump sum equal to three years' wages of the worker, one-half of which goes to a surviving wife, and the other half is divided among direct heirs, according to provisions of the common law and civil code. For partial permanent disability this sum is scaled down from 30 to 60 per cent according to the degree of disability, and is paid to the worker himself. Compensation for temporary disability amounts to one-half of the daily wage of the injured party. The employer is required to pro-

vide medical care, surgical and hospital treatment, etc., and must furnish the authorities with a report (including doctor's certificate) to prove that this has been done in each case of injury.

SCANDINAVIA. According to the *Stockholm Social-Democraten* for February 14th, the three Scandinavian countries have signed an agreement with regard to reciprocal treatment of persons covered by existing laws for the insurance of workpeople against industrial accidents. Henceforward, the citizens of any one of these countries, while residing in another country, are entitled to workmen's compensation on the same basis as the natives of that country. See OCCUPATIONAL DISEASES.

WORLD'S CROPS. See AGRICULTURE.

WRECKS. See SAFETY AT SEA.

WRESTLING. Joe Stecher, the Nebraska heavyweight, was the most prominent figure of the professional wrestling world in 1919. He engaged in numerous matches and ran up an impressive string of victories. Earl Caddock of Iowa won the championship in 1918 but because of war service did not defend his title in 1919. A match between Stecher and Caddock will be held during the early part of 1920.

The Amateur Athletic Union championships were held at Birmingham, Ala., the winners in the various classes being:

108 pounds, J. F. Meagher, Gary, Ind.; 115 pounds, Max Gans, Birmingham, Ala.; 125 pounds, Max Gans; 135 pounds, B. Johnson, Birmingham, Ala.; 145 pounds, Glenn Smith, Gary, Ind.; 158 pounds, George Tragos, Gary, Ind.; 175 pounds, Karl Kunert, Gary, Ind.; heavyweight, Stanley Czarnecke, Gary, Ind.

The intercollegiate championship was won by Pennsylvania State College for the second year in succession. Lehigh finished second and Cornell third.

WURTEMBERG. One of the constituent states of the former German Empire with a monarchical form of government; situated between Bavaria on the east and Baden on the west. Area, 7534 square miles; population, Dec. 1, 1910, 2,437,574. It was declared a "People's Republic" in November, 1918, and a constituent assembly was elected, Jan. 12, 1919, to frame the constitution. On March 7, Wilhelm Blos was elected president.

WYNDHAM, Sir CHARLES. British actor and manager, died in England, January 12. He was born at Liverpool in March, 1837, the son of a physician, was educated at Saint Andrews, at King's College, London, and at German universities. During the Civil War he came to America and obtained an appointment as surgeon in the Federal army. He was present at several of the great battles of the war and went through the Red River campaign. He returned to England in 1865 and appeared at Manchester in a play of his own composition. In 1868 he appeared in London where he at once won favor by his grace and vivacity in the playing of light parts. In 1869 he traveled all through the United States, playing in various rôles and winning a marked success. In December, 1875, he took the play of *Brighton* (Bronson Howard's *Saratoga*) which he had played with great success to the Criterion Theatre in London, and remained there for the next 23 years, gaining for the theatre a great reputation as the home of farce and light comedy, and acquiring for himself renown as a performer and stage man-

ager. In 1886 he produced *David Garrick* which from that time on was his favorite and most successful piece, and produced frequently, not only in England, but in foreign countries. Among the playwrights who supplied him with the best known, and the most successful plays was Mr. Henry Arthur Jones, whose series began with *The Bauble Shop* in 1893, and which included *The Case of Rebellious Susan*, *The Liars*, and other stage favorites. In 1899 he opened the Wyndham's Theatre with the revival of *Rosemary*, which was followed by a version of *Cyrano de Bergerac*. This venture into dramatic drama, however, was not successful. He then produced the well-known play by Mr. H. A. Jones, *Mrs. Danc's Defense*, and in this showed a capacity to act a serious part. During his later years he was mainly engaged in reviving celebrated rôles. In 1903 he moved to another theatre—the New Theatre. He made frequent visits to the United States where his acting was highly appreciated. See Florence T. Shore, *Sir Charles Wyndham* (New York, 1908).

WYOMING. POPULATION. By the federal census of 1910 the population was 145,965; by the State census of 1915 it was 141,705; while on July 1, 1919, the federal bureau estimated the population as 195,791.

AGRICULTURE. The following table is compiled from an annual report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu	Value
Corn	1919	48,000	768,000	\$1,267,000
	1918	40,000	1,000,000	1,400,000
Oats	1919	315,000	5,670,000	6,350,000
	1918	285,000	11,685,000	9,348,000
Barley	1919	35,000	525,000	919,000
	1918	30,000	1,110,000	1,143,000
Wheat	1919	284,000	4,008,000	8,497,000
	1918	260,000	6,600,000	12,174,000
Hay	1919	605,000	2,853,000	19,619,000
	1918	650,000	3,165,000	19,110,000
Potatoes	1919	33,000	2,640,000	5,016,000
	1918	30,000	4,500,000	3,825,000

a Tons.

EDUCATION. The school population in 1918 was 48,429, and the enrollment was 38,271. The average daily attendance was 27,960. There were in 1918 1965 teachers. The average salary of elementary school teachers was for men, \$697, and for women, \$532; men high school teachers received \$1660, women \$973.

CHARITIES AND CORRECTIONS. The following institutions are under State control: Hospitals at Evanston, Rock Springs, Sheridan; Penitentiary at Rawlins; Soldiers and Sailors' home at Buffalo; School for Defectives at Lander; Big Horn Hot Springs Reserve at Thermopolis; Industrial Institute at Worland.

OFFICERS: Governor, Robert D. Carey; Secretary of State, W. E. Chaplin; Treasurer, A. D. Hoskins; Auditor, I. C. Jefferis; Superintendent of Public Instruction, Katherine A. Morton; Attorney-General, Wm. L. Walls; Adjutant-General, W. K. Weaver; Librarian, Agnes R. Wright; Insurance Commissioner, R. B. Forsyth.

JUDICIARY. Supreme Court: Chief Justice, Cyrus Beard; Justices, Charles N. Potter, Charles E. Blydenburgh; Clerk, Wm. H. Kelly. See AGRICULTURAL EXPERIMENT STATIONS.

X-RAYS IN CHEMICAL ANALYSIS. See CHEMISTRY.

YACHTING. No sport suffered more as a result of the war than yachting and the season

of 1919 was most disappointing. The Federal government had taken practically all the larger yachts, both sail and power, and few of those that were left had been in commission for some years.

The associations in and about New York City ran off a series of races during the summer, chiefly on Saturdays and holidays and the Larchmont Club carried through a week's racing programme. The number of starters in the various events was small but it was expected that the sport would have a big boom in 1920 when Sir Thomas Lipton will make another attempt to capture the America's Cup. Sir Thomas formally challenged for the trophy in October.

Miss Detroit III for the second successive year won the gold cup races held under the auspices of the National Power Boat Association with a total of 17 points. *Miss Detroit II* was second with 16 points and *Eleventh Hour* third with four points. The *Bedouin*, owned by L. H. Straus, repeated its victory of 1918 in the New York to Poughkeepsie race.

YALE UNIVERSITY. A non-sectarian institution of higher learning located at New Haven, Conn. The enrollment for the fall of 1919 was as follows: Graduate School, 380; Yale College, 1394; Sheffield Scientific School, 1032; School of Medicine, 88; School of Religion, 111; School of Law, 135; School of the Fine Arts, 56; School of Music, 122; School of Forestry, 27; net total, 3326. There were 532 members in the faculty. The library has more than 1,000,000 volumes. Productive funds of Yale amount to \$25,000,000. The income for the year 1918-19 was \$1,997,272. The most interesting change of 1919 is the thorough reorganization effected by the Yale Corporation in March. This changed the relationship of the Sheffield Scientific School to the rest of the university, bringing it more completely within the general organization, and establishing a common Freshman year for the Scientific School and the College, at the same time lengthening the Scientific School course from three years to four. This change also included the departmentalization of the Faculty, and out of it grew later substantial increases in faculty salaries. There is in process of construction a quadrangle of dormitories for the upper classes of Yale College, the gift of Mrs. Stephen B. Harkness, in memory of her son, which will be when complete one of the finest groups of buildings of this sort in the country. Yale was founded in 1701. President, Arthur Twining Hadley, LL.D.

YATES, FRED. British-American painter, died at Rydal, England, in March. He was born at Southampton, England, but was taken to the United States in his youth and became a painter; subsequently studied in Paris under Bonnat, and acquired repute for his portraits, exhibiting at the Salon. He afterwards settled in San Francisco where he opened a school of painting, but returned to Europe and after a visit to the Continent, began about 1890 a series of portraits which gave him a wide reputation. He worked in oil and water color, pastel, crayon, and charcoal, and did a good deal of etching. In spite of this versatility he was reputed an able and honest craftsman. Among his sitters were his personal friend, President Wilson, and Mr. Augustine Birrell, Sir Henry Wood, and other well known men.

YELLOW FEVER. The report in November of the Rockefeller Foundation on progress in the warfare against this affection is encouraging, not only because this once widespread tropical scourge is now limited to a few small foci, but from the fact that the contagious principle appears to have been isolated by Noguchi in connection with cases in Guayaquil, Ecuador. The only foci for cumulative incidence during recent years have been at this locality and in Guatemala, where it was detected in June, 1918, and was a menace to the United States troops concentrated in Southern ports. In this Central American outbreak there were 550 cases with 200 deaths. Three months later the disease had been completely stamped out. Some of the local medical journals in the Spanish language give full accounts of the epidemic and the leading local health officer of Guatemala, Señor Villagrán, succumbed to the disease and received the honor of a memorial number of the medical journal, of which he was at the time editor. The rapid and thorough success of organized governmental measures of the local health boards, assisted by a representative of the United States Public Health Service, is most encouraging. The Rockefeller Foundation played no rôle in the Central American epidemic but will co-operate with the governments of western South America with the aim of the total suppression of the foci of disease in that part of the world. In an article by Rucker published in 1917 the danger spots of the disease were then said to be the Atlantic coasts of Mexico and Central America, parts of the West Indies and of western Africa. The epidemic at Guatemala was therefore not wholly unexpected, but the other areas have remained quiescent, while the appearance later of the disease in western South America was quite unforeseen. Until the recrudescence of the disease in Guatemala, the latter, as stated, was for a time the sole area of massed incidence in the world and at no time did it assume dangerous proportions.

YOUNG, BENNETT HENDERSON. Confederate veteran and lawyer, died at Louisville, Ky., February 23. He was born at Nicholasville, Ky., May 25, 1843, and was educated at Centre College, Ky. He served in the Confederate army under General Morgan. He was a member of the Kentucky Constitutional Convention in 1890. He was commander-in-chief of the Confederate Veterans. He wrote a history of the constitution of Kentucky, and other local historical works and also reminiscences of the Civil War.

YOUNG, RICHARD WHITEHEAD. Soldier and lawyer, died at Salt Lake City, Utah, December 26. He had commanded the 65th artillery brigade in France during the war, with the rank of brigadier-general. He was born at Salt Lake City, Utah, April 19, 1858, graduated at the University of Utah, 1877, at West Point in 1882, and at the Columbia law school in 1884. He served as an artillery officer and judge advocate, became brigadier-general of the Utah National Guard in 1894, and commanded the Utah light artillery in the Spanish-American War and the Philippine insurrection. On his return from the Philippines he was made regent of the State University (1905-17). He resumed active military service as colonel of artillery June 17, 1917, and was appointed brigadier-general in the National army, April 16, 1918.

YOUNG MEN'S CHRISTIAN ASSOCIA-

TION. A national organization to promote health, character, and piety among the boys and young men of the country. The YEAR BOOK for the year ending April 30, 1919, shows the following statistics: 2077 fully organized Associations, with a membership of 557,782 men and 181,656 boys; 5076 employed officers, making a grand total of members of 739,438, beside which there were 126,751 members in industrial occupations; property and funds totaled \$121,797,400, while the income for the year was \$29,925,046. Marked increases in work done for year over 1918 were reported, notably, an increase of 9.2 per cent in the Employment Departments up to 82,311 situations found for men; an increase of nearly 9 per cent in physical work up to 269,731 in regular gymnasium classes besides as many more in athletic and other features; of 5.9 per cent in educational work up to 86,734 different students.

Association war work reached its peak at the middle of the spring of 1919, when work was being conducted at nearly 1000 points on this side of the Atlantic and at nearly 3000 points in the American Expeditionary Forces overseas and at fully 2000 points among the armies of the Allies and in prison camps, or, in all, at some 6000 centres. It necessitated the enlisting of a staff of about 20,000 secretaries at home and overseas. The Association distributed over 5,500,000 copies of the New Testament, the Bible and other Scripture portions, and also at least 20,000,000 copies of religious pamphlets and booklets. About 7,000,000 books and pamphlets for reading and study purposes were purchased and distributed among the soldiers and sailors, besides circulating many hundreds of thousands of copies of magazines. Forty-five periodicals with a weekly circulation of about 700,000 were published, and over 400,000,000 sheets of letter paper and almost half as many envelopes were given away to the American soldiers overseas. More than 13,000,000 feet of film were sent or purchased abroad and were shown repeatedly in connection with the American Forces. The scope of the post exchange operations is indicated by the fact that in less than a year from June, 1918, to April, 1919, the Association sold 32,000,000 bars of chocolate, 60,000,000 cans of jam, 29,000,000 packages of chewing tobacco, 10,000,000 packages of candy, 2,000,000,000 cigarettes, 18,000,000 cans of smoking tobacco, and 50,000,000 cigars. These seven articles are only a few of the 159 different kinds of items handled. At the time when the operations were largest the capital involved exceeded \$20,000,000. During the year 11,229 men and women were sent to Europe to help conduct the work, while of the force there, 75 died either from disease or from shells, 120 received war medals, and 207 received citations or honorable mention. The cost of the new buildings (2526 units) which the Association erected was \$5,500,000, and the annual rental of buildings leased was more than \$800,000. At one time there were 95 entertainment troops playing in France, furnishing about 4350 performances a month. Students benefited by educational facilities were as follows: 6000 at the A.E.F. University at Beaune; 2500 in the farm school at Allevy; 7000 at French, and 2000 at British universities; 130,000 men at post schools corresponding to elementary schools in the United States, 55,000 attending divisional schools corresponding to American high schools, and 100,

000 attached to the agricultural department in the large base camps. In addition there were 5800 in specialized vocational schools in connection with the army shops. Sixty-eight hotels were maintained for officers and enlisted men on leave in various leave areas.

In America a personnel of 5464 conducted the 899 buildings, erected at a cost of \$7,879,202. The two campaigns for this work netted \$58,000,000.

Work with the French army was similar to that with the American soldiers. By Dec. 15, 1918, 1238 foyers had been started, 130 of which were destroyed by shell fire. The personnel included 638 French directors, 234 directresses, 272 American directors, and 47 directresses. In Italy, at the time the armistice was signed, the American Association was maintaining 200 buildings for the army and was active in 318 hospitals and 107 military barracks. In addition 20 regular motor routes were maintained for moving pictures and musical entertainment. During the Italian advance 58 new points were promptly established. Extensive work was carried on in the Russian army and among the civilian population. Stations were maintained at Vladivostok, Harbin, Irkutsk, Omsk, Samara, Kazan, Nishni, Novgorod, Archangel, and Murmansk. Work was also carried on in the Greek army, among the Czechs, in Egypt, in East Africa, and in Mesopotamia. Headquarters of the International Committee of the Y.M.C.A. are in New York City.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION. This organization has planned a world programme, through which emergency work maintained during the war shall be made permanent and new work undertaken in other fields. The War Work Council of the Y. W. C. A., through which present reconstruction work is done, is differentiated in policy from other relief organizations which coöperated in the United War Work Campaign; in that it works entirely for the interests of women and girls.

FRANCE. The Y. W. C. A. is the only American organization at present working in France for the welfare of women specifically. The Association has been asked by the French to continue its work indefinitely, in order to train French women to act as leaders in their own country, with a view to ultimately establishing a French Association. The foyers opened during the war in the large cities and munition communities, will be adapted to peace-time needs and established on a permanent basis. The City Association in the United States is used as a model in developing these foyers. One of the centres in Paris, which will be used as a model, has an up-to-date cafeteria, accommodating 2000 persons, a well equipped gymnasium and class room. A connecting building will house 50 girls. Similar foyers are being maintained in La Rochelle, Marseilles, Strassburg, Bordeaux, Tours, Bourges, and Roanne.

Up to the present time French universities have provided no living quarters for women in college towns. To meet this need the Y. W. C. A., coöperating with French committees, has opened student hostels for women at Lille, Grenoble, Bordeaux, and Paris. From July to October, 1919, the Association maintained in Paris an International Emergency Training School, similar to the National Training School for Y. W. C. A. workers in New York City.

The latest work of the Y. W. C. A. in France, undertaken at the request of the United States army, is the cemetery work. For the benefit of the women who go to France to visit the graves of their soldier dead, centres have been provided at the large American cemeteries. At Romagne, the last resting place of 21,500 United States soldiers, the Association has taken over two barracks for the use of persons visiting the Argonne Cemetery. This is the first of a series of similar centres at Bouy, Belleau, and Tere en Tardenois, which the Y. W. C. A. is now establishing near other cemeteries of the battle area.

An American Women's Club has been organized in Paris for women not familiar with the city. It has accommodations for 125 transient guests. The Intelligence Bureau of the Club seeks to furnish every kind of information required by the traveler, including all available data on cemeteries.

CZECHO-SLOVAKIA. The Y. W. C. A. went into Czecho-Slovakia in April, 1919, at the request of Dr. Alice Masaryk, daughter of the President. A directory of existing welfare organizations and a survey of Prague were first undertaken. The survey was carried on by experts under the following divisions: Health, recreation, social welfare, industry, and religion. According to the health survey, Prague has excellent sanitary conditions, but tuberculosis is appallingly prevalent. On August 1, 1919, a six-weeks' demonstration training school for social workers was opened in a chateau on the edge of the city. Plans have been made for a student foyer in Prague; two city Associations, one in Prague, the other in Bratislava; summer camps for both cities, and a permanent Y. W. C. A. training school for native students.

POLAND. The first unit of 20 Polish Gray Samaritans set sail for Warsaw, July 31, 1919, at the request of the Children's Relief Committee of Poland. All of these women were graduates of the Polish Gray Samaritan School maintained in New York City by the Y. W. C. A. to train Polish women for reconstruction work in the land of their ancestors. Out of 300 girls who took three months' probationary training in their home cities, 90 qualified for the nine months' intensive training in hospitals and medical technique, the care and feeding of children, and various phases of social service. Warsaw has been divided into 10 districts with two workers in charge of each district. Ten soup kitchens have been established where food and minor medical care can be given to children.

ITALY. The American Y. W. C. A. cooperated with the Italian U. C. D. A. in eight centres. Headquarters are at Genoa. Other centres are Rome, Naples, Palermo, Spezia, Milan, Trieste, and Florence. Activities include hostels, clubs, and cafeterias. In Naples is an emigration port centre for women and girls. Also at Naples, directors of factories have requested noon-hour club work to keep the girls away from the streets. While none of the hostels in Italy are hostess houses, American women passing through are accommodated, and each of the centres keeps a list of pensions and hostels to which travelers may be directed.

RUSSIA. In Petrograd, in Moscow, down the Neva, from Vladivostok to Archangel, the Y. W. C. A. did its war-time work. It waits only for peace to make the work permanent. The foyer opened in Archangel at the end of July had in

four days registered 267 for class work and in four weeks there were 550,125 "Girl Guides." The foyer is now closed, but the girls, like the Y. W. C. A. secretaries, are waiting for sufficient peace in Russia for them to continue this work.

At present the active work is in Siberia. There is a hostess house at Vladivostok, which serves as a home for the 12 secretaries who sailed after the armistice. In addition there is a service centre with classes in English (200 attending), sewing and embroidery, physical training and drafting, recreation work for the hundreds of refugee boys and girls on Russian Island, and educational and recreational work among Russian wives of American soldiers.

BELGIUM. Work is opening up in Belgium. In Brussels are the headquarters office and home of the Y. W. C. A. workers, an hostel, accommodating about 20 girls with full Association programme and a foyer. This foyer is to have a cafeteria, gymnasium, concert hall, class rooms, and a rest and reading room. A second foyer in Antwerp is housed in an attractive building, provided by the citizens of the city.

RUMANIA. Bucharest is the headquarters for the work in Rumania, which was begun after the armistice, at the request of Queen Marie.

NEAR EAST. At present there are 10 Y. W. C. A. secretaries cooperating with the American Committee for Relief in the Near East.

JERUSALEM. When the Red Cross withdrew from Jerusalem, the Y. W. C. A. was urged to carry on the work. There is an hostel, used by the British girls stationed in the Palestine centre, a workroom, and an employment bureau for local women.

CONSTANTINOPLE. A Y. W. C. A. service centre was opened in Constantinople in April, 1919, when social and recreational clubs reached as many as 250 girls and where classes in English, French, dressmaking, home nursing and hygiene, stenography and typewriting were given. This centre is the first Y. W. C. A. city work opened in Turkey. Work among the Armenians includes management of the Refugees or Brides' Home in Harpout, Turkey, where there are about 130 women, most of them married to Turks and freed since the armistice, a foyer at Harpout, and relief work among refugees at Arabkir and Scutari. A service centre is planned for Smyrna.

Bulgaria, Lithuania, Greece, and Serbia have asked for Y. W. C. A. work, but these pleas have not been met because the Association has not workers or material for expansion on so large a scale.

The overseas budget for 1919 was \$3,000,000, but for 1920 it will be about \$1,000,000. A summary of the war work for United States soldiers will be found in the NEW INTERNATIONAL YEAR BOOK for 1918. The officers of the National Board are: President, Mrs. Robert E. Speer; chairman executive committee, Mrs. John French; secretary, Mrs. Lewis H. Lapham; and treasurer, Mrs. Samuel J. Broadwell. Headquarters are maintained at 600 Lexington Ave., New York City.

YUKON. A Territory of Canada, bounded by Alaska on the west and the Northwest Territories on the east and extending from British Columbia at the 60th parallel to the Arctic Ocean. Area, 207,076 square miles, of which 640 are water; population in 1911, 8512, as compared with 27,219 in 1901. Capital, Dawson,

with a population in 1911 of 3013, as compared with 9142 in 1901. See CANADA.

ZANDONAI, RICCARDO. See MUSIC, *Italy*.

ZANZIBAR. A British protectorate of east Africa, comprising the island of Zanzibar (640 square miles), the island of Pemba (380 square miles), and several islets; situated off the coast of the former German colony, German East Africa. Population of Zanzibar (1910), 113,624; of Pemba, 83,109. The Europeans numbered about 200. Chief town, Zanzibar, with a population of about 35,000; one of the best of the African ports. The production of cloves is the chief industry, the output in 1917-18 being 10,123,000 lbs. Sultan in 1919, Seyid Khalifa bin Harub (born in 1879); high commissioner, Maj.-Gen. Edward Northey; British resident, Gen F. B. Pearce.

ZEBEDASSITE. See MINERALOGY.

ZEISLER, FANNIE BLOOMFIELD. See MUSIC, *Artists, Instrumentalists*.

ZEISLER, JOSEPH. Professor of dermatology at Northwestern University, died September 1. He was born in Austrian Silesia, Oct. 7, 1858, studied at the University of Vienna in the Vienna General Hospital; came to the United States in 1889 and settled in Chicago. From 1889 to the time of his death he held the professorship of dermatology in the Northwestern University Medical School and served as dermatologist in other institutions.

ZIMRO ENSEMBLE. See MUSIC, *Chamber Music*.

ZINC. The following information in regard to the year's production is supplied by the United States Geological Survey: The production of primary metallic zinc from domestic ores in 1919 was about 446,000 tons, and from foreign ores about 13,000 tons, a total of 459,000 tons, compared with 492,405 tons and 25,522 tons, respectively, a total of 517,927 tons, in 1918. Of the output of domestic zinc in 1919 nearly 27,000 tons consisted of electrolytic zinc, as compared with 38,916 tons in 1918. In addition there was an output of over 17,000 of redistilled secondary zinc compared with 9,597 tons in 1918, making a total supply of distilled zinc in 1919 of 476,000 tons, of which about 45,000 tons was of high grade, 24,500 tons was of intermediate grade, 77,500 tons was select and brass special, and 329,000 was prime western. The production of the corresponding grades in 1918 was 129,023 tons, 68,937 tons, 98,584 tons, and 230,930 tons, respectively. Of the total output of primary zinc in 1919, about 118,000 tons was made in Illinois, as against 141,844 tons in 1918, 43,000 tons in Kansas as against 29,149 tons,

119,000 in Oklahoma as against 139,066 tons, and 65,500 tons in Pennsylvania as against 77,342 tons in the preceding year.

The exports of zinc made from foreign ores were about 17,500 tons and those of zinc from domestic ores were about 127,000 tons, compared with exports of 26,837 tons of foreign and 80,244 tons of domestic zinc in 1918. The exports of domestic zinc include about 20,000 tons of sheet zinc as against 13,875 tons in 1918. The apparent consumption of primary zinc during 1919 was about 304,000 tons, compared with 423,361 tons in 1918 and 413,643 in 1917, a quantity somewhat below the pre-war figure, which for the years 1910-13 averaged 327,255 tons.

The decrease in smelter stocks after June 30th coupled with the practical absorption of the large government stocks held by the Ordnance Bureau at the beginning of the year, taken with the continuance of large exports and the growing demands of the domestic building industry caused a stiffening of prices and an increase in operating capacity during the last quarter of 1919. The exports of zinc averaged over 11,500 tons monthly. Great Britain made the largest demand for our exports of slab zinc, taking the greater part of them doubtless in rebuilding her export trade in galvanized products, and France, Japan, and Italy were next in order. Italy was the largest importer of sheet zinc from the United States in 1919, Great Britain was a close second, and Japan took an important quantity.

The *Metal Bulletin* of London, under date of Dec. 16, 1919, called attention to the critical state of the British zinc smelting industry and, considering the possibility of obtaining zinc from other countries, pointed out that Germany, on account of lack of fuel and ore, was producing only about 3000 tons a month, no more than her own needs; that Belgium, producing about 3000 tons a month, would need the whole of her output in 1920 for sheet zinc; that France, on account of the destruction of her works and lack of coal, could not be counted on for supplies in 1920; and that works in Holland were closed because of the prohibitive price of coal. The inference was that the United States would continue to export zinc to England at least for a year.

The production of electrolytic zinc in the United States in 1919 was 25,962 tons, compared with 38,885 tons in 1918 and 27,245 tons in 1917. The American producers were the Anaconda, River Smelting and Refining Co., Judge Mining and Smelting Company, and the Mammoth plant. All of these works were inactive at the end of 1919, but in the case of the Ana-

New York and St. Louis, cents per pound. London, pounds sterling per long ton.

conda and Judge companies, preparations were being made to restart. The Consolidated Mining and Smelting Company at Trail, B. C., produced 12,520 tons in 1919, 12,574 tons in 1918, and 9956 tons in 1917.

The total capacity of the zinc-smelting works of the United States at the end of 1919 was 174,924 retorts as compared with 180,602 at the end of 1918. The works actually operating possessed a total of 153,804 retorts, of which 99,356 retorts were in operation on December 15th. The stock of zinc on hand at all works on Dec. 31, 1919, was 39,560 tons, compared with 40,325 tons on January 1st. This was all from domestic sources, no bonded metal being reported.

The United States government early in the year had a large stock of zinc on hand, as did the smelters, and it was impossible to arrange a basis of marketing the metal as was done with copper. Accordingly owing to large stocks and production the price of common zinc declined until a low point of 5.90 cents was reached early in May. Such a price was comparable on its face with that of pre-war days but not in view of costs of production in 1919. There is included a table also from the *Engineering and Mining Journal*, giving monthly average prices.

ZOOLOGY. As was stated in the YEAR BOOK for 1918, there was at that time some uncertainty among librarians in the United States whether the German zoological journals were being published. In 1919, however, these began to be distributed to American libraries. From their number, and the character of their contents, it would appear that the war did not seriously interfere with the zoological output in Germany. Researches were along much the same morphological and experimental lines as in earlier years, most of the work being of too highly technical a character for summary here.

The American Society of Zoologists met at St. Louis in affiliation with the American Association for the Advancement of Science, December 29th, 30th, and 31st. The American Society of Naturalists met at Princeton on December 30th and 31st.

Evidence of the increasing recognition of the importance of field studies of wild life was given by the establishment at Syracuse University of the Roosevelt Wild-Life Forest Experiment Station, devoted to the study of every phase of forest wild life, and in Michigan, of the Edward K. Warren Foundation which sets aside as reservations about 300 acres of primeval forest and sand dunes where native animals and plants may be studied in their natural surroundings. The latter is to be administered under the direction of the Zoology Museum of the University of Michigan.

In 1892 the late Prof. C. O. Whitman of the University of Chicago began a series of experiments on pigeons which were not completed at the time of his death in 1910. His accumulated data were taken in hand by Riddle who also continued some of Whitman's experiments and the results appeared as publication number 257 of the Carnegie Institution of Washington. The work is in three volumes of which the first deals with the subject of evolution in pigeons. In this are reprinted several of Whitman's earlier papers with the hitherto unpublished data con-

sisting of notes and many figures in support of Whitman's belief that evolution of color pattern in pigeons shows no indication of the action of natural selection or of mutation, but has been solely an orthogenetic process. Whitman regarded the turtle dove, *Turtus turtur*, as more primitive than the rock pigeon, and the colors of other pigeons have, he thought, developed in an orthogenetic fashion from those originally present in this species. The second volume gives the data which led Whitman to a disbelief in either Mendelism or mutations at least as far as pigeon evolution is concerned, as shown by results obtained on the hybrids of various wild species, with especial reference to inheritance of sex and color; and to his belief that sex can be controlled in these animals. (See Riddle; YEAR BOOK for 1916 for further reference to this latter theory.)

The third volume deals with the behavior of pigeons and is edited by Carr. It gives notes made by Whitman on mating, nesting, incubation, and caring for the young, on homing, and on the voice. In these as in the evolution of form, Whitman finds the process to have been an orthogenesis from the simplest to the most complex, there being no evidence for mutations.

Two volumes in the series of Monographs on Experimental Biology appeared during the year. Morgan in *The Physical Basis of Heredity*, outlined recent developments of the Mendelian theory of heredity, with especial reference to the application of the results of cytological investigation on the structure of the cell and the rôle of the chromosomes as material carriers of hereditary factors or "genes." Phenomena of linkage, crossing over, and interference are discussed, with reference to Morgan's belief that all of these phenomena are explicable on the assumption that the chromosomes are really the bearers of the genes. In opposition to Riddle (see YEAR BOOK for 1916) who thought that "overworking" a female pigeon would cause her to lay male eggs he stated that Riddle's own results showed that the sex of these pigeons was really determined by their chromosomal character. While Morgan believed that the genes are located in the chromosomes he is careful to point out that the results of study on Mendelian inheritance would be the same if the genes were located in some other part of the cell.

The resemblance between Mendelism and the particulate theory of inheritance proposed by Weismann, Morgan considered quite superficial, the latter having been proposed to explain embryonic differentiation, and not heredity. The action of a gene is not limited to one character but "each gene may have manifold effects on the organism and every part of the body is the product of many genes." The chemistry of the genes and their mode of working is not clear from evidence now at hand.

The second volume of this series was by Parker on "The Elementary Nervous System" in which the subject matter is limited to the Sponges, Coelenterates, and Ctenophores. Parker analyses the nervous system into "receptors," "adjustors," and "effectors," the first being the sense organs, the second the central nervous organs, and the third the muscles or similar organs. Parker stated that only the effectors are found in the sponges. "They mark the beginnings of the neuromuscular mechanism

in that they possess the original and most ancient of its constituents, muscle, around which the remainder of the system is supposed to have evolved." The book gives a general account of the various systems as they occur in the phyla mentioned with a final chapter of the relations between these systems and the more complex systems of the higher animals, especially in the development of the very complex central system or adjutor.

Of recent years much attention has been given to the study of the internal secretions of glands with reference to their effect on the metabolic processes of the animal body. The problem has been attacked by two methods—the study of the effect of removal of the gland, or the feeding of gland extracts upon the body itself, and the study of the effect of the gland extracts upon metabolic processes in lower animals or in plants; using these, that is, as "indicators" to show the physiological working of the gland secretions. Allen (See YEAR BOOK for 1918) had previously stated that in tadpoles from which the thyroid had been removed the metamorphosis into the frog condition was greatly delayed while sexual development seemed not to be so much affected. Allen later (*Biol. Bull.*, 36, 6) showed that the removal of the pituitary body was also followed by delayed metamorphosis, and he suggested that the results he obtained could be explained on the hypothesis that the thyroid gland acts as a storage organ for iodine in the body and controls its distribution, while the pituitary body is important in the utilization of iodine by the body. Feeding of iodine to tadpoles deprived of both of the above glands is probably followed by metamorphosis. Allen was not able to carry these entirely through that process, but this failure seemed to be due to other causes. With normal feeding, however, involving the intake of only small amounts of iodine the presence of both glands is essential. E. R. and M. M. Hoskins (*Endocrinology* 4,1) reached essentially similar conclusions in that a preparation of the pituitary body will hasten the metamorphosis in normal larvae and will apparently produce metamorphosis in tadpoles deprived of their thyroids. Moore (*Biol. Bull.* 37, 3) finds that adrenalin when applied to the muscles of planarians produces an effect which is predominantly excitatory, though the effect upon locomotion is to cause a slowing of the rate, perhaps due to lack of coordinated motions. Flather (*Biol. Bull.* 37, 1) found that the effect of extracts of various glands caused varying effects on the rate of contraction of the contractile vacuoles in *Paramecium*, the greatest acceleration being caused by pituitary substance and the least by pineal. Flather thought that the effect was primarily due to an increase in the rate of metabolism for the entire animal rather than to any special action on the vacuole itself. Budington (*Biol. Bull.* 37, 3) tried to determine by experiment on plants whether the action of these glands is specifically on animal protoplasm or whether it may apply to protoplasm as a whole. Thyroid extract was used in various strengths in Pfeffer's solution in which onion root tips were sprouted. The stronger solutions with which he worked (1 grain to 125 cc.) seemed to delay growth. Extracts of other glands gave negative results. E. R. and M. M. Hoskins (*Jour. Exp. Zool.* 29, 1) repeated the experiment on the removal of the thyroid in

Amblystoma and *Rana* and found that metamorphosis will be delayed for at least one and one-third years if the animal is kept on normal diet. They thought that failure to metamorphose is due mainly to faulty metabolism especially of calcium. Moore (*Jour. Exp. Zool.* 28,3) studied the relative weights of male and female rats after early removal of sex glands in both sexes. There proved to be a constant sex difference in weight in the two sexes which is not due to the presence of the sex bodies, the males always being heavier than the females. Moore also showed (*Jour. Exp. Zool.* 28, 2) that the transfer of the sex organ of one sex into the body of the other did not produce any very marked somatic effects but was followed by marked psychical changes, each sex taking on the peculiar habits of the other. Kornhauser (*Jour. Morph.* 32, 3) found that when the insect *Thealia* is parasitised by the polembryonic *Aphelopus* the male host will acquire female characters in color, form, size, and habits, while the changes set up in the females are much less noticeable.

As is well known, the male of *Triton* has an especially prominent tail fin during the mating season. Kohlmann (*Comptes Rendus, Soc. de Biol.* 82, 21), stated that treatment with thyroid extract favors the permanence of this fin, causing it to remain until after the breeding season. It is, however, not able to produce a development of the fin at other seasons. Kohlmann thought that the physiological working of this gland varies at different times.

Just (*Biol. Bull.* 36; 1) discussed the problem of fertilization in the echinoderm *Echinarachnius parma*. In agreement with Lillie (See YEAR BOOK for 1914), he adopted a theory of "fertilizin" to explain the attraction of the sperm to the egg and supposed that double impregnation is prevented by the neutralization of the fertilizin by the entrance of the first spermatozoon. This is in opposition to Loeb, who thought that membrane formation is the preventive agent. The variability of fertilizing power shown in different eggs is explained by Just on the assumption that they vary in the amount of fertilizin that they contain.

HEREDITY. As has been stated in earlier YEAR BOOKS, the work of Morgan and his students has led to the assumption that the genes which are responsible for the appearance of characters in the fruit fly are arranged in a linear fashion along the chromosome, their position on the chromosome being indicated by the frequency with which "crossing over" occurs. Frequent crossing over indicates that the genes are at a considerable distance apart on the chromosome, while infrequent crossing indicates that they are closer together. Castle (*Proc. Nat. Acad. Sci.*) argued in the first place that some of Morgan's statistics indicated a frequency of crossing greater than 50 per cent which he stated was absurd since a percentage as high as this indicated no linkage at all. If there is linkage the per cent of crossing must be under 50 per cent as above this indicates random grouping. According to Castle, Morgan got certain distances by adding together the several intermediate distances; thus distance A to B plus distance B to C should equal distance A to C, while as a matter of fact this sum is longer than the distance A to C calculated directly. A more accurate representation than the linear one would, he

thought to be a figure like $\begin{array}{c} A \text{---} B \\ \diagdown \quad \diagup \\ C \end{array}$ and for the

whole series of genes a somewhat complicated arrangement involving three dimensions, would be the accurate representation. This would make the assumption that chromosomes twist around one another unnecessary since we could suppose that the carrier of the gene is an organic molecule and that at the reduction division there is a period of instability and particles may break away and join others. This would be more reasonable than the opposite assumption of a double crossing over. To this a reply was made by Morgan, Sturtevant and Bridges (*Proc. Acad. Nat. Sci.*), who argued that the assumption of an "organic molecule" is meaningless as is also the statement that more than 50 per cent of crossing over would be the equivalent of no linkage. They say that crossover values are liable to variation due to genetic factors, environmental conditions, etc., and that when reliable data have been obtained the results agree with expectation.

A much discussed point in heredity (see earlier YEAR BOOKS), has been whether selection of extreme variations in any direction can produce permanent modifications of the race in that direction. Most students of the subject have decided in recent years that it does not, apparent permanency of the selection being due to removal of inhibiting or modifying genes. Castle's results with hooded rats have apparently been an exception to this rule for by selection he has been able to maintain a race containing either more or less of the black color than the one with which he started, and Castle has been strong in the advocacy of the belief that selection has a permanent effect. In a recent paper (*Proc. Acad. Nat. Sci.*, April, 1919), Castle records results obtained in new experiments on these rats which lead him to the contrary opinion. Selection in the hooded rat is apparently effective through the removal of modifying genes. This removes the most prominent exception thus far brought against the general rule.

Duerden (*Am. Nat.*, July-August), reported on the character of the germ plasma in the ostrich. Though subject to intensive study for the past 50 years no variations have been noted in the quality of the plumes. Improvements that have appeared have been due to recombinations of characters already present. There has been a good deal of mixing of germ plasma from different sources but this has not set up anything new. In connection with the wing feathers some degenerative changes seem to have been under way and this appears to be due to a definite factorial change.

Duerden thought that repeated selection may extend the range of variation downward but not upward. Castle (*Am. Nat.*, November-December), discussed this work and gave reasons for not accepting Duerden's results as accurate.

Jennings (see YEAR BOOK for 1916), decided that in *Diffugia* repeated selection could produce permanent results, though this was in disagreement with his earlier work on *Paramoecium*. Hegner (*Genetics* IV, 2), reported on similar experiments in *Arcella*; another shelled protozoan. Hegner found that he could produce by selection from a single specimen two lines reproducing vegetatively the two differing in measurable heritable qualities. The differences may

seem slight but are constant for both high and low lines. This divergence persisted through a period of non selection and thus the conclusion follows that a permanent divergence had been obtained. Hegner suggested that nuclear modifications might be responsible for these hereditary results but deferred discussion of this point to the publication of a later paper.

Mohr (*Genetics* IV, 3), presented evidence for the mutation of an entire region of a chromosome and Bridges and Mohr (*Genetics* IV, 2), presented data concerning inheritance in a mutant factor "vortex." Gomen (*Genetics* IV, 3), made a biometrical study of crossing over and concluded that this process occurs in general in the way postulated by Morgan. He could find no evidence that crossing over is in any way affected by such external agencies as food or temperature. Crossing over he concluded, is an extremely variable phenomenon, indicating that the mechanism behind it is not as precise as that found in most physiological studies.

Onslow (*Genetics* VIII, 4), described the results of observations on the inheritance of wing color in Lepidoptera using a commercial "Tintometer" and was able thus to express numerically the tints and arrange the data in the form of curves. The yellow ground color of the moth *Abraxas grossularata*, var *lutea* is incompletely dominant over white ground. The F_1 generation seems to show a chance distribution but in F_2 segregation occurs.

Bridges (*Jour. Exp. Zool.*, 28, 2), showed that "purple eye color" in *Drosophila* has been a most important mutant because of the ease with which it may be studied and because its relations to other factors are such as to aid in studying them. Seyster (*Biol. Bull.*, 37, 4), stated that the facet number in the bar-eyed race of *Drosophila* decreases rapidly with increase in temperature. This he explained on the assumption of an increase in the chemical activity of an inhibitor under the increasing temperature. This inhibitor, working for a short time during the larval period produces the observed results. It has been found in earlier work on Genetics that homozygous yellow mice never appear, the explanation usually given being that for some reason the zygotes which should give rise to these are not able to develop. This theory has been strengthened by observing that litters which should contain some of this sort are smaller than usual. Kirkham (*Jour. Exp. Zool.*, 28, 2), found in a study of the development of the eggs and embryos of yellow mice as compared with white, that a certain number of blastulas, strictly comparable in number to the embryos lost on the above hypothesis, are actually destroyed by phagocytes during implantation of the ovum.

EVOLUTION. Duerden (Records of Albany Museum, S. Africa, III, 3), described the callosities on the legs of ostriches and their significance in the evolution of the race. Certain of these arise during the lifetime of the individual as a result of use while certain others seem to be inherited. This raises the question as to whether these may not really be the result of the inheritance of an acquired character. Duerden does not attempt to decide this much disputed question. He points out that the ostrich has already lost two toes in its evolution, and is in the process of losing one of the two remaining ones.

Tower in an elaborate paper on the Mechanism of Evolution in *Leptinotarsa* (Carnegie Inst. Pub., No. 263), adopts a purely mechanistic conception of life, stating that all life processes are capable of analysis into physical forces. The "evolution" problem should be conceived of in a purely mechanistic sense devoid of "utilities," purpose, motives, or "forces of evolution." He does not believe that any of the older theories, whether natural selection, Lamarckism, orthogenesis or mutation have any importance. The factorial hypothesis of heredity is the most fruitful, the characters of organisms being regarded as products of two or more agents. These may be removed one from the other, thus causing the disappearance of the character. Tower assumes that the organism in its gametic makeup is but the associate combination of an unknown number of non living characters. Any change in character which the organisms undergo is of the same order and due to the same causes as are characteristic of changes in non-living matter. Grinnell (*Am. Nat.*, September-October), stated that a natural experiment in evolution has been started in Greenland Ranch in Death Valley, where a colony of English sparrows belonging to the subspecies *Passer domesticus hostilis* has been established for about three years. Although the climatic conditions here are very different from those of any other habitats of this animal, no change in the character of the skins could be observed in these when compared with those collected elsewhere. He concluded that evidently the sub-specific characters are more permanent than is usually supposed.

CYTOLOGY. Nakahara (*Jour. Morph.*, 32, 3), studied the chromosomes in the spermatogenesis of the stonefly *Perla immarginata*, Say, up to the end of the first spermatocyte division. There are 10 chromosomes, including the X and Y. The author discussed the mode of origin of the bivalent chromosomes. In the same number of this journal Goldsmith described a comparative study of the chromosomes of the tiger beetles. Here it is possible to classify the types of behavior into three classes, each being represented by a typical fertilization formula. The sex chromosome appears on the first spermatocyte spindle as a double body the two elements being very unequal in size. In the first division these both pass to one pole of the spindle in advance of the autosomes, giving secondary spermatocytes with 10 and 12 chromosomes respectively. The germ cells of the female seem to contain about twice as much chromatin as do those of the male. Seiler, working on the sex chromosomes of Lepidoptera (*Biol. Bull.*, 36, 6), shows that the female has one X chromosomes. Two classes of eggs are formed having 29 and 30 chromosomes respectively, while all spermatozoa have 30. There are two classes of embryos with 59 and 60 chromosomes, occurring in the expected ratio. In the salamander, *Amblystoma tigrina*, Parmenter (*Jour. Morph.*, 33, 1), studied the chromosome number and pairs in somatic mitoses and found evidence to support the theory of the individuality of the chromosomes. The chromosome number was constant, and measurements of chromosomes showed that they retain a consistent size throughout, and also show evidence of a separation between the paternal and the maternal chromosomes. His observations are not in agreement with the belief that

variation in chromosome number is the rule, or that the lengths of chromosomes may vary. Smith (*Biol. Bull.*, 37, 4), studied the fertilization of the large salamander *Cryptobranchus alleganiensis*, and found that the germ nuclei did not fuse, but their descendants pass separately to the daughter nuclei. This separate position of the two parts of the nucleus was he thought, maintained, certainly to an advanced stage of the cleavage. Later there are certain structures which seem to disguise this character but he nevertheless thought it persists.

While perhaps the majority of workers believe in the chromosomes as the carriers of heredity some maintain that other cell structures are equally important. Meves (*Archiv. f. Mik. Anat.*, 92 Hft. 1 and 2), reviewed at considerable length the evidence from various animal phyla that other structures are probably concerned. He tried to show that the nucleus is not the only part of the sperm head which enters the egg, and thus there is no reason for assuming that the sperm head which is mainly chromatin, is the sole factor concerned. The plastosomes or structures of the cell protoplasm are important determiners of bodily characters and thus have a function in heredity. That the so-called "mitochondria" of cells are really symbiotic bacteria is a proposition which has been advanced, but the theory was declared invalid by Regaud (*Comptes Rendus, Soc. de Biol.*, 82, 7).

Herlaut (*Arch. de Zool. Exper.*, 58, 7), declared that none of the principal organs of the cell are indispensable to the process of cell division. Division of the cell appears as the sum of a series of divisions which are independent of one another. The chromosomes for example, divide independently of the centrosomes, both dividing because of physico-chemical changes taking place in the protoplasm. Mitosis is not, he said, the cause of cell division, but the consequence of it. Hartmann (*Archiv. f. Zellforsch.*, Pd. 57), described observations on the growth of cells in the body. Intestine cells do not divide after birth, the increase called growth being due to increase in cell size. In the intestine the nucleo-plasma relation decreases with increasing size of the cells, while the nucleo-nuclear relation decreases with increasing cell size. Nucleolus reduction thus becomes more prominent.

PROTOZOA. Franz (*Archiv. f. Protist.*, 39, 3), discussed the relationship of the Protista and decided that these are related only to plants and not to the metazoa at all. With plants they form a systematic-morphological group of the Protophyta. The Protozoa, he thought, are derived from many celled algae-like organisms and probably other Protista are derived from many celled Thallophytes. Dawson (*Jour. Exp. Zool.*, 29, 3), published the first part of a study on *Oxytricha hymenostoma* which he had carried for 289 generations. He found no indication of syngamy though there were cases of fusion of the animals in pairs as well as of cannibalism. The fusion might be temporary or persist until death. After separation, there seemed no indication of depression as indicated by the division rate. Cannibalism had the effect of slightly raising the division rate. Apparently this race of *Oxytricha* which is without a micronucleus can live indefinitely under favorable conditions without conjugation, autogamy or endomixis. Pack (*Biol. Bull.*, 36, 4), described

experiments on two ciliata from Great Salt Lake, Utah. This lake contains less than 50 forms of life, in fact only 17 have thus far been reported. Pack experimented on the effect of dilution of the water on the character of the protozoa, and found that they responded by showing a greatly increased size, increased activity, shortening of the feeling cilia, more active physiological and reproductive processes and more flexible and contractile bodies. Evidently these ciliates are plastic and capable of adaptation. Pack thought that if the dilution were slow enough, they might be transformed into fresh water animals.

Juday (*Biol. Bull.*, 36, 2), stated that in fresh water lakes in Wisconsin the lower strata of water lose their contained oxygen for a certain time each summer and that when this occurs the organisms of these levels rise to a higher level. In Lake Mendota, however, he found one ciliate probably belonging to the genus *Enchelys* which has apparently become entirely anaerobic. This was found at depths of from 14 to 22.5 meters and in the majority of cases where no oxygen at all is present in the water.

Hegner (*Jour. Exp. Zool.*, 29, 3), found that *Arceia dentata* when subjected to various environmental factors such as solutions of sodium silicate and ethyl alcohol, or when subjected to various temperatures or, underfed, changes appeared in the character of the shell, but that these changes disappeared when the animals were brought back to the normal conditions.

COELENTERATES. Kukenthal and Meves (*Zool Anz.*, April), recorded observations on the spermatogenesis, maturation and early development of *Aleyonaria*, up to this time very imperfectly known. Child (*Biol. Bull.*, 37, 2), published further observations on the susceptibility gradient in hydroids, showing that in a number of genera the susceptibility decreases as we go from the apical toward the basal regions. Medusa buds and gonozooids appear first on the regions where susceptibility is lowest. Hargitt (*Jour. Morph.*, 33, 1), stated that the germ cells of hydroids are never segregated in early ontogeny but are first differentiated as sexual maturity approaches. In the Scyphozoa they arise in the endoderm, while in the Hydrozoa they may arise from either or both layers even in the same individual. No evidence could be obtained from a variety of experiments to indicate that the theory of continuity of the germ plasma is correct. The chromosomes of the germ cells may show a genetic continuity but they "do not persist as discrete entities during interkinesis." Tannreuther (*Biol. Bull.*, 36, 6), described what he called migration of the reproductive organs from parent to bud in hydra. If the reproductive organ is situated near the base of the new bud, it will be carried out on to the bud with the cells which make up the latter.

Goetsch (*Biol. Centralblatt*, 39, 7), described experiments on hydra where when the apical end had been cut away, testes which had begun to form transformed themselves into tentacles. Growth and regeneration are dependent on food for neither will take place if this is lacking. Regeneration may take place independently in different parts of an organism, regulation coming in only very gradually.

PLATYHELMINTHES. Löhner (*Zool. Jahrbuch*, 36, 1), described the process of digestion of blood in planaria. The extracellular digestion in the alimentary canal is in an alkaline medium

while the intracellular process takes place in an acid medium. Prenant (*Archiv. de Zool. Exper.* 58, 5), stated that the rhabdites of the Turbellaria are formed by the degeneration of nuclei, and apparently they have the composition of nucleo-proteins. Kreeker (*Biol. Bull.*, 37, 3), described the circulation of the body fluid in a nematode showing that by reversal of a peristaltic contraction the fluid is kept moving from one end of the cavity to the other. This apparently has a respiratory function with especial reference to the nutrition of the young contained in the uterus. Young (*Biol. Bull.*, 36, 5), showed that somatic and germ cells are very closely associated in cestodes, the flame and testis cells having apparently come from a common mother cell. There is no evidence in the cestode of predetermination of parts or a germ path. Faust (*Biol. Bull.*, 36; 5, 6), described the excretory systems in a number of Trematodes showing a general similarity in the structure of this organ in a number of genera.

ANNELIDA. Gilson (*Comptes Rendus, Soc Biol.*, 82, 23), stated that the belief that the chlorogogue cells of the intestine of the earth worm are modified peritonium, is incorrect. They are instead, portions of the muscle cells of the intestinal wall both of the longitudinal and circular layers whose inner parts are thus differentiated for contraction, while the outer portions containing the nuclei, are glandular.

MOLLUSCA. Drew (*Jour. Morph.*, 32, 2), continued his studies on the sexual activities of the squid *Loligo*, describing the structure, ejaculation and formation of the spermatophore. This is formed in the spermatophoric sac which is divided into a number of parts each having its own function in the process. When fully formed each has a mass of spermatozoa, cementing material, and an elaborate apparatus for ejaculation. The cement fastens the spermatophore in place on the female, and the ejaculatory apparatus, at the proper time, sets the spermatozoa free. Copeland (*Biol. Bull.*, 37, 2), described locomotion in the gastropod *Alectrion*. It has previously been suggested, but generally denied, that snails may move by ciliary action. In this snail Copeland found that there was a complete correlation between the beating of the cilia on the foot and the movements of the animal, so that there is no doubt that in this case, the cilia are the locomotor organs. Arey and Crozier (*Amer. Nat.*, November-December), described the coloration of *Onchidium floridanum* in Bermuda. There are two color phases but neither shows any resemblance to the background and so cannot be regarded as protective. The animal has well developed repugnatorial glands which are an efficient protection, but the correlation of these glands with color is not close enough to warrant the supposition that the colors are warning.

INSECTS. Thompson (*Biol. Bull.*, 36, 6), described the development of the castes of eight genera of American termites. Brues (*Biol. Bull.*, 37, 1), called attention to the increase in our information concerning the comparative structure of insect larvae and pupae and the value of the study of these stages in classification. The larval stages have followed an independent line of modifications and this has led to great dissimilarity between adults and larvae in the higher insects. Baumberger (*Jour. Exp. Zool.*, 28, 1), showed from a study of various insects

that those who inhabit fermenting or decaying materials live on the microorganisms present, and thus depend on the power of the fungi to extract and synthesize the non-protein nitrogenous compounds. Mellor (*Annals of Applied Biology*, 6, 1), recorded observations in house flies. Horse manure which has ceased to ferment and is cold is not attractive to these flies though it attracts other species; 99.5 per cent of the flies emerging from a pile of horse manure during 24 hours in autumn were *Musca domestica*, the males as a rule, emerging earlier than the females. Ninety per cent of larvae buried to a depth of four feet in clay, loam or sand came to within one foot of the surface before pupating. Minnich (*Jour. Exp. Zool.*, 29, 3), reported on the photic reactions of the worker honey bee, which is strongly positive to light. His results indicated that the orienting stimulus is of a continuous character, and the conclusion follows that to be effective in the orientation of the normal animal the stimulus must be a continuous one.

Farmers' Bulletin, No 1037, gives directions for the treatment of termites. In building one should use either concrete foundations or timbers impregnated with coal tar creosote. Termites around plants may be killed by dosing the soil with carbodisulphid or by using coal oil emulsion. Riley (*Am. Nat.*, November-December),

tested the ability of the water strider *Gerris remiges* to return to a pool after having been taken away or to find other pools when those they were in dried up. He concluded that their return to pools was very much at random, possibly being aided by sight of water. There seemed to be no very acute sense informing them of the direction of water. Nuttall (*Parasitology*, 19, 9), stated that head lice seek shade in preference to light, though in warm weather dark clothing is inimical because it is apt to have a higher temperature. The insects also dislike moisture arising from perspiration. Dewitz (*Zool. Jahr.*, 36, 2), gave reasons for thinking that the wingless condition in insects is due to a lack of oxygen in the medium surrounding the developing insect. Lack of pigmentation and of eyes would have the same explanation.

VERTEBRATES. Lang (*Zool. Soc. Bull.*, 22, 4), reported that a young Okapi has been reared in the Belgian Congo this being the first record of successful experiment of this sort. It is of especial interest because of the desirability of learning to handle this rare animal in zoological gardens.

ZULULAND. A portion of the province of Natal in the Union of South Africa. It was annexed to Natal, Dec. 30, 1897. Area, 10,424; population (1911), 219,606.
